> Nina Holland, a researcher with NGO Corporate Europe Observatory, tells IE about the long arm of the EU pesticide

lobby and how they attempt to stifle debate and influence decision-making.

greeneuropeanjournal.eu/feeding-people-or-the-agroindustry/
Green European Journal - The European Venue for Green Ideas -- 21 December 2023 --- - 7 min. read
Feeding People or the Agroindustry? -------- Nina Holland
Yes, especially the most vocal proponents of pesticides like to claim that organic farming takes up too much space.

greeneuropeanjournal.eu/can-agriculture-and-biodiversity-coexist/ [... piet: .. yeah, space they covet, like to hog and monopolize, .. like to pharm 24/7/365 property line to property line .. dictate their dank ways on .. leave no alternatives to ... space they don't wanna see turned to sanctuary space disentangled from said parasitic and cruel deathdrive inspired scams ..... space that 'threatens' their model, refuge to their displacement of relativism w absolutery of schizioac schizzooonoia]

But if we compare this with how much food is wasted in industrial agriculture, the pollution it produces, and the contribution it makes to climate change, and if we look at who pays these costs, we get aâ€¯very different picture.

Thread ReaderHi, dutch 65yo here. i caught Lyme mid80s in Missouri, and again late10s in the Netherlands. Evil has an easier time w 'trickle down' / reach n preach all around than good. Accidental and intentional 'leak abouts' racing each other .. unspecifying in all possible senses of that word. In my case venal, banal but not fatal enuff to stop my write up [link below].
I follow PDuke & GWebb. Your guest spot will prolly remain this week's hilite for me.

re Glyphosate:
we hear plants can be immunized against it and this flips into a runaway prob when the targets become immune [mentioned as often].
Humans however, get none of those bennies. Why?
Is it bycause paying fines is 'cheaper' than the loss of a trickbag they hope to squeeze more patents out of before eventual and inevitable leaks and splatters get identified by people with a hi tolerance for this top of the most disheartening abjectitude line?
Here's hoping you'll probe in that direction, affecting waaaaay more life than ticks cause it uses above board lies humans quickly generalize ... w biocidal and zombifying results.

> In this riveting episode of Metabolic Matters, we journey into the depths of self-discovery and authentic living with our esteemed guest, Dr. Zach Bush. A thought-leader and visionary, Dr. Bush delicately unravels the profound connection between the soil beneath our feet and the soul within us.
>
> Dive into a conversation that transcends ordinary understanding, exploring the potent power found in surrendering judgment and embracing our true, unfiltered selves. Dr. Bush elucidates how relinquishing the constraints imposed by our five senses propels us into a life brimming with joy, boundless connection, and unparalleled abundance.
>
> As we navigate through this transformative discourse, you'll learn how to attract resources and opportunities that harmonize with your highest purpose. Discover how to bend space-time with merely your presence and unveil secrets that pave the way to a life of genuine fulfillment.
>
> Key Takeaways:
> --The intricate linkage of soil and soul
> --How liberating oneself from sensory limitations leads to a life of abundance
> ---Attracting opportunities that resonate with your true purpose
> --The impactful power of surrendering judgment
>
> Get ready to be captivated and inspired, as this enlightening conversation sparks a flame of change and propels you towards making a poignant impact on the world.
> Don't miss out on this transformative episode that will not only provoke thought but also inspire action towards a life replete with joy and purpose!

perhaps secret Monsantites keepin tabs on the oppositions / resistance ... END OF PARANOID PREAMBLE //////////

my respect for him does rise due to the avalanche magnitude of incriminating evidence ... crimes against life since 1950 [date of invention he mentions without putting a name on it, which he does do at chd page -Henri Martin, swiss, at Cilag- but with a lame link to a polish site]:
https://childrenshealthdefense.org/child-health-topics/known-culprits/glyphosate/understanding-the-basics-of-glyphosate/
http://www.ojs.ukw.edu.pl/index.php/johs/article/download/7504/9184

> Glyphosate is a broad spectrum chelator, a nonselective herbicide, an extremely effective antimicrobial agent, a synthetic amino acid, an endocrine disruptor and a probable carcinogen. The world has never experienced such a multi-pronged compound used liberally and indiscriminately. In my opinion, the history books someday could well state that "glyphosate is the most chronically toxic compound ever indiscriminately released into the environment".
>
> The substance glyphosate was initially discovered in 1950 by a Swiss chemist, Henri Martin, at the pharmaceutical company Cilag. At that stage the product had no known pharmaceutical purpose. In 1964 Stauffer Chemical Company discovered the chelating capabilities of glyphosate and it was developed and utilized as a descaling agent for boiler systems and steam pipes. Although Stauffer screened glyphosate as an herbicide, it was passed over because it did not meet their functional period of time. It was not until the early 1970s that glyphosate was discovered/developed by Monsanto scientists to have herbicidal activity.

link to first 1964 patent I found is a dud ... testing it just before 'pubberee' I find this:
https://agfundernews.com/a-microbial-cleanup-for-glyphosate-just-earned-a-patent-heres-why-that-matters .. my name for a flattened and therefore more reliably recallable archive version: 'Patented PaeloPower a glyphCultKilled soil revivor' – "put the heartbeat back into your soil"

Toxic Exposure, Legal Remedies - Winning Very Large Cases.- Todd Boyle ---- 5.94K subscribers ------ 17 views Mar 10, 2024 --- TVA Kingston Coal Ash Spill, the largest industrial spill in United States history --- Panelists: Louis W. Ringger, III, Angela Hind, M.D., Norman Kleiman, PhD March 3, PIELC 2024 - The Public Interest Environmental Law Conference --University of Oregon law school - Eugene, OR----------The Tennessee Valley Authority/Jacobs' Engineering Kingston Coal Ash spill was one of the largest environmental and industrial disasters in United States history. On December 22, 2008, a coal ash pond holding decades of industrial waste ruptured, releasing over 1 billion gallons of coal ash into the surrounding community. The spill and consequent litigation received significant international press, and this summer resulted in an unprecedented settlement as compensation for the deleterious health effects suffered by the clean up workers as a result of their unprotected exposure to the coal ash. The prolonged case took 10 years and is a powerful demonstration of the following:
----1. The importance and power of the formation of community around unjust medical harm by corporations. The community that formed amongst the clean up workers and their families was instrumental and inspiring, and it swayed public opinion and influenced case outcome. The case could not have been won without the passion, persistence, and cohesiveness of the hundreds of workers and their families.
----- 2. The plausibility of legal recourse for non specific health injuries related to specific chronic toxin exposures.
---- 3. The undeniability and strength that partnership between lawyers and leading medical toxin researchers brings to cases involving exposure, causation, and medical harm.
---- 4. The value of legal cases to compel EPA to address the health risks of unregulated and emerging toxins. Prior to this case coal ash was classified as nuisance dust with no recognition of its extreme toxicity. The 221 worker plaintiffs many of whom worked 12 hours, 7 days per week, for over 5 years were denied even the most basic protective equipment and thus were exposed unnecessarily to the toxic components of coal fly ash. In 2013, after so many of them had become sick and seen their health ruined , dozens of workers filed suit against the TVA contractor, Jacobs' Engineering, who was responsible for safety oversight. Hundreds of other workers joined the lawsuit in the ensuing years. In 2018, a jury ruled in the first phase of the two phase federal trial that Jacobs' actions could have caused a long list of specific diseases due to the constituent toxins in coal ash. These included coronary artery disease, leukemia, COPD, asthma, peripheral neuropathy, hypertension, lung cancer, and skin cancer. In the second phase, plaintiffs had to establish specific causation and extend the conclusion that the workers' exposure to coal ash "could have caused" their conditions or "did cause" them. Our law firm, assisted by Dr. Angela Hind, assembled a team of scientific experts to establish the causal relationship between coal ash exposure and the specific medical conditions present among the individual workers, including leukemia, lung cancer, cardiorespiratory conditions, neurological conditions, skin conditions, and other ailments. This team of experts included the following: 1. Elizabeth Ward, PhD, Epidemiologist and Chair of the World Trade Center Science Advisory Committee 2. Dr. Sanjay Rajagopalan, Director of the Cardiovascular Research Institute at Case Western Reserve University. 3. Dr. Carrie Redlich, Director of the Occupational and Environmental Medicine Program at Yale University School of Medicine. 4. Joseph Graziano, PhD, Senior Professor of Environmental Health Science at the Columbia University Mailman School of Public Health 5. Dr. Francis Arena, Clinical Professor at the NYU School of Medicine, and Medical Director at NYU Langone Arena Oncology 6. Dr. Raajit Rampal, MD, PhD, Clinical Director of the Leukemia Service at Memorial Sloan Kettering Cancer Center 7. Ola Landgren, MD, PhD, Chief research,

Myeloma Division, University of Miami Medical School Dr. Hind and I, along with one or more of the experts listed above, will discuss how this team was established, and how subsequently the team worked in concert to develop a cohesive scientific and medical case for coal ash toxicity and medical harm among the cohort of workers. We will discuss how community organizing among these hundreds of local workers and their families was an integral aspect of our approach. This community swayed public opinion, documented compelling patterns of disease among the workers, and worked tirelessly with reporters. Finally, we will discuss the profound injustice inherent in the destruction of a person's health when corporations are negligent with toxin disposal and clean up, especially in impoverished areas such was the case in Kinston, TN Transcript

COAL ASH DUST
"dangerous just by the fineness of the particulate matter"
No NO no Nooohhhohohhhh HHHH!!!!!!!!!!!!!!!
this is classic baby bathwater paranoia
it's like saying men above a certain age are by definition suspect if they happen to be deadly jealousy 'provoking' kidmagnets ...

the fineness is an asset and feature ... a treasure in fact ... BUT it's exceedingly important to keep it down and let the micro workers sort it out ... they will and thrive doin so .... same goes for many such substances .. the 'waste' of steel making .. etc ... this brand of paranoia caused a dutch 'whistle blower bunch' to help a panic along, sparked by idiotic untidyness ['zwerfvuil'] which caused a HUUUUGE MOUNTAIN of extremely valuable stuff .... [god's own money in fact in fact, if you look into this little 'matter of concern[unnos and associated]' long enuff], to be demonized with the astrologically predicated vehemence enhancement, our topsi turvee world will be able to keep up thru 2025 tops, when this 'end' time 'full stops' .. and by no means necessarily ... if we wise up to ops .. by the necessity i urge u to become adept recognizing .. easily done while my tracks are still warm ... i'm still open to questions

still inspire people and must keep distancing myself from those who try to realize lots of delicate stuff from a distance, iow, NOT under guidance of those who 'spilled' a hint and incling or too that got them inspired in the first place ...

... crediting ... really hard if you never saw the point of that being routine staple to NOT lose threads worth following instead of breakin n rippin n tearin at them, into them and worse .....

Health for all, Hunger for none
Bayer continues to make progress on its five-point plan to manage and mitigate the risks of Roundupâ„¢ litigation in the U.S. We settled most of the claims in this litigation and have appropriately provisioned for the remaining claims. Having won trials, the company will continue to try cases based on decades of science and worldwide regulatory assessments that continue to support Roundup's safety and non-carcinogenicity.
Recent Updates: ---On March 5, 2024, a jury in the Kline trial reached a defense verdict in Philadelphia. This is Bayer's third consecutive trial victory. Full statement
---On March 5, 2024, plaintiffs voluntarily dismissed with prejudice the Meyer case in the Superior Court of California for Sonoma County. This means that this case cannot be refiled.
---On March 1, 2024, the jury in the Cody case issued a verdict in our favor which validates our strategy of taking cases to trial based on strong scientific and regulatory evidence. This is the 11th win in the last 17 cases. Full statement

i go the 'Report a Side Effect' page ... where they ask about symptoms to which i reply:
a range ... since you know very well they vary according the affectee's weak spots
a single application by a neighbour .. talk about 'side' effects ... UNBEKNOWNST TO ME !!!!!!!!!!!!

i am your death angel, your company and if i can help it your entire industry will be disbanded, carefully dismantled, detoxed and dissolved .. and the hardasses and stubborns amongst you will be undergoing mandatory therapy, multigenerationally if need be ... behind a spacious but hermetic sets of circular walls dotting the landscape around sites of your worst offences .... your entire history of ddt, agent orange and lately bioweapon psyoperatrix will be seen for what they are and i will tweet this out in just a mo

MDS is Moms, Doctors, Scientists
i think that lacks an ethicist ... or two .

National Geographic Logo - Home
https://www.nationalgeographic.com/environment/article/mexico-ban-genetically-modified-corn
Mexico is treating corn from the U.S. as a threat. Here's why.
Corn originated in Mexico, but fears that genetically modified seeds could contaminate these ancient varieties have led to bans on certain U.S. imports.
Mexico plans to ban glyphosate, an herbicide that may harm health. Concerns about the chemical were sparked by a controversial 2017 report that may have overstated the risk of glyphosate exposure. A subsequent study published in 2021 found the chemical was present in children who hadn't had any direct contact with it, though no major health problems were directly tied to the chemical.

Deuterium and Glyph. MDS = moms, doctors, scientists
https://t.co/nFh4PMK3zY

https://people.csail.mit.edu/seneff/2021/Laszlo_August_2021.pdf

Deuterium and SARS-CoV-2 Vaccines Stephanie Seneff MIT CSAIL The 2nd Budapest COVID Medical Conference August 18, 2021 ---------- In December of 2019, I first became aware of the critical role of deuterium in health and disease. I was introduced to deuterium by Prof. Laszlo Boros, a Professor in pediatrics at UCLA, and an expert in the new field of deutenomics (the science of deuterium metabolism in the body). Deuterium is "heavy hydrogen" â€“ a deuterium atom is a hydrogen atom with a neutron as well as a proton, making it twice as heavy and changing its biophysical and biochemical properties in dramatic ways.
---------- laszlogboros.com/about-me

https://stephanieseneff.net/category/deuterium/

It did not take long for me to realize that glyphosate (the active ingredient in the herbicide Roundup) and deuterium are synergistically toxic. At the time, I was just about to finish writing the first draft of my book on glyphosate (Toxic Legacy: How the weedkiller glyphosate is destroying our health and the environment). I

had written all about how glyphosate specifically disrupts proteins that bind phosphate. With a little digging into the research literature on deuterium management in the body, it became clear that a whole class of proteins that bind phosphate called flavoproteins plays an essential role in protecting the mitochondria from excessive deuterium in their water. Flavoproteins catalyze many reactions that extract hydrogen atoms from one molecule and add them to another one. They have an elegantly designed active site that takes advantage of a physical property of protons called proton tunneling to assure that protons rather than deuterons are delivered to make the reaction product. Ultimately, these "high quality protons" are delivered to the mitochondrial intermembrane space. One flavoprotein that is very important to the mitochondria and shown to be disrupted by glyphosate in multiple studies is succinate dehydrogenase. It is the only enzyme that plays a role in both oxidative phosphorylation and the citric acid cycle in the mitochondria. This enzyme extracts two hydrogen atoms from succinate and adds them to ubiquinone (coenzyme Q10), to make ubiquinol, an essential antioxidant in the mitochondria.

Bayer and Monsanto: a merger from hell
geke (70) ----- in #merger â€¢ 8 years ago (edited)
--------- Bayer AG is attempting to purchase Monsanto Co. in what many are calling a #mergerfromhell. If an agreement goes through in the next few weeks, the two corporations may begin pursuing antitrust approval. So in honor of this heartwarming prospect, we thought it would be good to revisit the venn diagram featuring the U.S. government's revolving door into Monsanto headquarters, and a new one we've put together for Bayer.
---------Most people think of Bayer as an aspirin maker, but they are a leading manufacturer of pesticides, seeds, and plant biotech. Bayer has been acquiring companies in this sector, including Aventis CropScience and Plant Genetic Systems. The European Parliament is worried a further merger with Monsanto would allow Bayer to "dominate the seed market in Europe.

the 4yo eco article comes with a neat steemit feature:

African Sociological Review 14(2) 2010
The rise to prominence of Artemisia annua L. â€“ the transformation of a Chinese plant to a global pharmaceutical
----- Caroline Meier zu Biesen ------ Institute of Social and Cultural Anthropology, Landoltweg 9-11 14195 Berlin, Germany caromzb@gmx.de ---------- Abstract This paper focuses on the transformation of a recently promoted medicinal plant named Artemisia annua L. For over 2000 years, the Chinese have used A. annua as a herbal tea preparation against malaria. Pharmacological studies led to the isolation of artemisinin as the principal anti-malarial compound. Since 2001, the World Health Organisation (WHO) has recommended artemisinin-based combined therapies (â€˜ACTs') for the treatment of malaria â€“ Novartis is the leading actor to extract the compound in tablet form. In the 1990s, A. annua was introduced to Tanzania. Beside the local plant-based promotion of Artemisia-tea as an efficient, inexpensive natural practice to treat malaria, Tanzania hosts influential actors who seek to commercialise the plant. By following the biography of the Chinese medicinal plant, its global transfer, production, marketing, distribution, consumption, and its transformation to a highly demanded commodity, the paper critically reveals the dialectics and reciprocities between different actors and their relation to existing powerful reference systems (such as WHO, Pharmaceutical Industry). Keywords: Artemisia annua L., artemisinin, Tanzania, ACT, effectiveness, social life of medicine

09/04 ---- 3Human ------ k172

https://rumble.com/v4o858w-fertility-limiting-ivermectin-rediscovered-in-china-in-an-ancient-tomb-year.html
i happen to mention the Chinese Nobel Prize for Artemisia work awarded in '15.
3 years ago, the WHO tried to kill this 'competitor', earmarking it 'not fit for internal use', iow, a mandatory labeling that lumps it in w dangers, .. with unsavories at the very least], check this only 1m vid.
It refs/shows 'microbiology letters, 362, 2015, fnv199' ....
... i'll get back to that but first, from a comment:

djh1999 - 15 hours ago: So that part of the article was dealing with Artemesia Annua not Ivermectin...
--------- Artemisia annua L. (the sweet wormwood) has been used for thousands of years by Chinese herbalists and traditional healers as a treatment for malignant malaria, with evidence of use dating back to the Wushi'er Bingfang (â€˜Recipes for Fifty-Two Ailments'), an ancient text discovered in 1973 in a tomb dating from 163 BC (Hsu 2006). In the 1970s, it was definitively demonstrated that A. annua L. extracts had anti-malarial activities in animal models and in 1972
-------- Now you can look into the Madagascar Protocol for covid "Artemesia Annua and Ivermectin" - kinda a fun combination

34p
http://www.spentamexico.org/v15-n3/A1.15(3)1-35.pdf

Madagascar Protocol to Treat COVID 19
Two Mechanism: Artemisia annua Targeting Ferritin & Ivermectin Stopping Viral Replication
Dr. Jose Luis Abreu is President of Spenta University Mexico (Monterrey, Mexico) -- Dr. Jennifer Hibberd (Editor)

Artemisia in times of ConDemix -- .. one of the refs asks:

> Is ferritin the product of inflammation or a pathogenic mediator?

the paper itself tries to affirm the latter, 'ferritin feeds/fuels CS [i capitalized the spellout i this quote from page 10 of 36]:

> Finally, they reported that laboratory findings in patients with severe COVID-19 showed data consistent with CYTOKINE STORM involving elevated inflammatory markers, including ferritin, which has been associated with critical and life-threatening illness.
> --------"Garrick and Ghio (2020 in Abobaker, 2000) explained that inflammation induced by COVID-19 infection increases the hepcidin level, the main regulator of tissue iron store. It has been proposed that the coronavirus (SARS-CoV-2) spike protein has hepcidin-like action, which means that the virus can directly increase ferritin level regardless of the inflammatory effect."

the swiss 'pharmafiyant' Hanspeter Strobel i linked to yesterday claims kurkumin combines well with artemisia

an even larger failing of this paper is that it makes exactly 1 mention of the ph levels and a mere throw away aside at that on page 15 .... a mistake, given Ph guides friend or foe distinquishment, making ClO2 and H2O2 such safe therapies. Their bets are on the "endoperoxide bridge", whatevs thadiz.

a few more 'voorlopige' ['prowluminary'] jots:

> Medspot in Madagascar, IMRA / 1957 funded by profits from Madecassol -- centella asiatica derive--
> A & S Rakoto Ratsimamanga run IMRA in Antananarivo
> Gvt certified since 2012 -- they carried out 20 [TWENTY] Artemisia studies since 1975

Covid-Organics = artemisia, abundant on Malagasy soil ... was used on 'couph duh covid convirID' recoup upon con [couponcon for shorters] & coerciollywop

> Dihydroartemisinin is the active metabolite of all artemisinin compounds (artemisinin, artesunate, artemether, etc.)
>
> page 16: The study of Yang et al (2014) demonstrated that artesunate treatment activates lysosomal function and then promotes ferritin degradation, subsequently leading to the increase in the lysosomal iron which is utilized by artesunate for its cytotoxic effect. In conclusion, intracellular iron and ferritin degradation is essential for artesunate-induced lysosomal activation and cell death.

so you dangle valuable prey in front of baaaad cellspiracies but then refuse to let go when they try claim it, bit the bait and attempt to occupy, usurp, consume, steal it .... OK, ... guess i got it thus far ...

page 14: adding vitC enhances A'nins

piet: please note, 'flattening' the pdf reverses the column sequence

> As a microbiologist, I was delighted when I read the news that the Nobel Prize in Physiology or Medicine 2015 was awarded for the development of anti-parasite therapies to microbiolo- gist Professor Satoshi ÅŒmura (Kitasato University, Tokyo, Japan), parasitologist Professor William C. Campbell (Drew Univer- sity, Madison, NJ, USA) and pharmaceutical chemist Professor Youyou Tu (China Academic of Traditional Chinese Medicine, Beijing, China).
>
> The 2015 Prize was awarded for two distinct pieces of workâ€" one on plants, one on Bacteriaâ€"but since I feel I can't ignore Professor Tu's work (she did get 50% of the prize share, after all!), I'm going to discuss that of all the prize winnersâ€"firstly, the discovery and development of artemisinin (formerly known as â€˜arteannuin' and also termed quinghÄ?osÃ¹ in Mandarin) as an anti-microbial targeting Plasmodium falciparum (causative agent of malignant malaria). This is actually a much longer story than that involving

Professor Tu's work over the last 45 or so years. ---------- Artemisia annua L. (the sweet wormwood) has been used for thousands of years by Chinese herbalists and traditional healers as a treatment for malignant malaria, with evidence of use dating back to the Wushi'er Bingfang (â€˜Recipes for FiftyTwo Ailments'), an ancient text discovered in 1973 in a tomb dating from 163 BC (Hsu 2006). ----------In the 1970s, it was definitively demonstrated that A. annua L. extracts had anti-malarial activities in animal models and in 1972, Professor Tu isolated and described artimesinin itself as part of the Chinese military's Project 523 (a period of her work that she evocatively self-reviewed for Nature Medicine; Tu 2011). The commercial production and widespread worldwide use of artemisinin alone and in combination with other drugs (efficacy of use with other drugs was discussed in this journal as part of a mini-review by Bell 2005) ...snip.... resistance to artemisinin and its derivatives is sadly rising (reviewed by Vanaerschot et al. 2014). The second piece of work honoured this year by the Nobel Commissionâ€”and this is where the microbiology comes inâ€” was the discovery of avermectins, a class of macrocyclic lactones that are active against parasitic worms such as Onchocerca volvu- lus (causative agent of onchocerciasis or â€˜river blindness') and Wuchereria bancrofti (one of the agents that causes elephantia- sis tropica, also known as lymphatic filariasis). Avermectins are the natural fermentation products of Streptomyces avermitilis, a species first isolated by Professor ÅŒmura's team in 1978 from Japanese soil. The first descriptions of the species and those of avermectins were published by the teams of Professor ÅŒmura and Professor Campbell in a series of publications in 1979 (Burg et al. 1979; Egerton et al. 1979). ... snip .... The gene cluster involved in biosynthesis of aver- mectins was sequenced by (Ikeda et al. 1999) Professor ÅŒmura's team and was found to encode four giant multifunctional pep- tides (AVES 1, AVES 2, AVES 3 and AVES 4) that made up the aver- mectin polyketide synthase complexâ€”a complex containing 55 active sitesâ€”one of the most complex multifunctional enzyme systems known .. snip.. we are mistreated to utter pharmafiotic hell for half an hour strait before the role of a bad diet even makes it to a first mention .... WTF?!?!?!/?!/?!/!/ what's the point? celebrating mister submissive who sounds like he still admires the hospital psyopera that did their thing with him mercilessly for 3 years. Then he says he's convinced they try to kill you with a bad diet. Took him a few years to get to his feet ... another 8 years later he's back at his lifting but now on meat mostly ....

> David's Resilience: Overcoming Stage 4 Non-Hodgkin's Lymphoma -- Metabolic Terrain Institute of Health ---- 1.07K subscribers --- 28 views Apr 23, 2024 ---- David Kemp from Australia shares his journey of being diagnosed with stage four non-Hodgkin's lymphoma and the challenges he faced during his treatment. He discusses the initial diagnosis, the intense chemotherapy and radiation treatments, and the complications he experienced, including blood clots and infections. David also talks about the importance of nutrition and how he transitioned to a ketogenic diet to support his recovery. Despite the difficulties, David's resilience and the support of his wife helped him navigate through the treatment and regain his strength. David shares the emotional toll it took on him and his wife and the improvements he experienced after adopting a high-fat, low-carb diet.
> --------David emphasizes the importance of nutrition and its role in supporting the immune system and overall health. He also highlights the need for personalized treatment plans and the limitations of the current medical system. Despite the obstacles, David's story is one of resilience, hope, and the power of making positive changes.https://my.terrain.network/marketplac...

https://dothaneagle.com/news/local/enterprise-native-found-appreciative-audiences-as-classical-pianist/article_d284a6ea-5720-11ee-9faa-abdc3493bcda.html

> Enterprise native found appreciative audiences as classical pianist ---- Special to the Eagle Sep 19, 2023
> Classical pianist Patrick Mullins found a tough audience in one of his first public appearances â€“ before his elementary school classmates in Enterprise in the 1950s.
>
> His brother, Edward, had arrived from the University of Alabama to watch brother Dick Mullins play football when Patrick came trudging home from school with his toy piano under his arm and tears in his eyes. Ed asked his little brother how it had gone.
>
> "All they wanted to hear was â€˜Toodles the Tug'!," Patrick cried. "Then the tears really started to flow," Ed recalled.
> Patrick James Mullins, 72, who died in New York City on July 31, would find far more appreciative audiences for the talent that emerged at 3 years old, when he would climb up onto the piano bench beside his sister Sandra as she

practiced piano. Soon he was picking out parts of the classical pieces she would play.

> Worst ever Big Pharma acquisition? | DW News
> DW News ------ 5.14M subscribers ----- DW is a German public broadcast service. Wikipedia ----- 4,362 views May 2, 2024 #bayer #monsanto #takeover ------ It's been described as one of the worst corporate acquisitions in history. When German company Bayer bought US seed-maker Monsanto for $63 billion in 2018, it inherited billions of dollars worth of lawsuits from farmers who claimed its weedkiller, Roundup had caused their cancer. Today Bayer's entire market value is less than half of what it spent to buy Monsanto. DW Business sat down with Bayer CEO Bill Anderson to ask him how he plans to turn his company's fortunes around and how it felt to face shareholders for the first time. The discussion covers Bayer`s struggles to deal with the litigation costs linked to Roundup, the looming loss of patents on two of its best-selling drugs, accusations about its operations in South America and the company`s dealings with China. Bill Anderson also describes his new "Dynamic Shared Ownership" model, with which he is hoping to drive innovation, bring down costs and speed up processes within the company.

The Relationship Between Cancer, Inflammation, and Lipoxygenase Activity - Stephanie Seneff, Ph.D

Dr. Stephanie Seneff discusses the intriguing role of lip oxygenase and its interaction with deuterium and hydrogen, highlighting its effect in cancer. She outlines the enzyme's function in fatty acid metabolism and its peculiar ability to selectively favor deuterium over hydrogen, having significant implications in cancer cells' mitochondria activities and their adaptations in creating deuterium depleted environments. The talk underscores the complex pathways involved, demonstrating the crucial role these processes play in cancer cell survival and proliferation. #CancerResearch #DeuteriumDepletion #MitochondrialProcesses

CBC on Manitoba RoundUp cancer suit
https://t.co/EwrxUs7N5T

disastrous encounter with the one village candidate for mutual support. She did defend me and has already lost friends over refusing to get on the 'rapist Piet' bus ... and even while affirming that choice by driving past 'her' walking club with me in the car .. on the way to the here and there plentiful waterfleas for her acquarium, which takes up most of her time she claims .. so fixatedly that distractions with tales

about tall frisian 64 year olds cooking a camping gear meal on the center boatlanding by the church are not welcome routine breaks at all to the point of cutting my recountery off at the point i direct him to Gerda's boat-on-harbour-shore w gardenshedhome next to it.

our conversations get very emotional and she forbids me to simply show up announced at the end of it .. which i have done no more than 3x in half a year btw. i sure do not feel as ugly as i am, understandably, missing, browned + gap-n-a-half-tooth smile, perceived as. Sigh ... ouch.

Anyway, as usual, the best answer to her 'did you rape any of the minors'? question appears as afterthought. it is true i cause appearances to be against me [schijn tegen] but the science behind thoughts guiding my behaviour are solid and i can capture them succinctly enuff:

no, to the contrary .. you see, this is yet another fine tuning, almost plain reversal to add to my already long and illustrous list, untoppably headed by, appropriately enuff, floodwaters.

instead of keeping them out and the fructifying sediments they carry along with them as well [plane 'disast' at lengthiest last'] i propose to let them in [you'd have to have treehousing projects in place or something, letting the trace matter precipitate out and THEN remove excess waters]

now to humans, another very very slippery subjectvity ...
.... a child is an individal, puberty are the spasms needed to break it's unity up to make room for others. Maturity is the maintenance of commu- and commonalities that keep the cycle hale and the whole round enuff to roll without developing bumps, heaves, knocks and other tearwear.

if you connect the attainment of mastery over kinetic potentials of bodies to some sort of team rites, rotes and routines [i hate to call it sport] you gain good bonds into the bargain .. and as i was on the tail end of experiencing samples of that [the meter tall trunks with handles for 4 and iron caps or at least bands on the ends, to hammer posts with] i have lively reason for lifelong gratitude.

Take that instance or any and all rope dos .. the 'caller' syncs the force bundling w rhythm vocals taylored to the moves ... and in the case of breaking boulders or something, the success is a moment of climax and relaxation, clearly akin to the act of procreation. This is the type of thing i did not miss opportunities to initiate .. but when it came to one on one sensuality, apart from rubbing an ache or massaging congested body parts, i steered clear of privates at all times or even caresses for caressing sake.
Of course when you carry a child on your back their privates are pressed into you spine but that doesn't count and cannot cause any of the arousal points one reaches easily with this rope / snake // clean / clear teaching method. I reached that point to my own suprise a few times and immediately froze and excused myself at that point. realizing later it was very simply the result of having exhausted the supply of candidates for contact relationships, all approaches, more than a handful over the years, failing [jammerlijk falend].
my most fertile decades were spent ignoring mating urge as long as possible, until ... at it's height, every few weeks or so, they distorted my focus into peaking interest for someone i judged lonely yet enuff to benefit from a few nite stands and was often suprised how much of that interest crashed soon after.
Call me sick, a perv .. a no good ... but no rapist. Volition is my religion.

add remarks on dangers of all the above goin rigor mortis in 'good' time .. .. iow danger of duhh formalism and compromise

In Florida our wild dolphins and many other wildlife had massive death numbers that is most accurately described as "death of biblical proportions" as a result of Red Tide that was fueled heavily by phosphorus and nitrates! I believe the main cause was 4 decades of Government Sanctioned Poisoning of our Rivers, lakes and Aquifers with Glyphosate and other terrible chemicals that are killing everything! In 2017 the Aquatic Plant Management of FWC increased the active ingredient of glyphosate 250% and increased the number of gallons sprayed by 25% to nearly 1 million gallons! The hurricane churned up these chemicals that were accumulating in the mud as dead plants, forcing it through Lake Okeechobee to the east and west killing everything in its path

> There really is something for everyone, panning around Washington/Oregon looking for wacky stuff I found what

looks like a leftist proto-tranch, and also a TERF moon worship village.

i looked as well ... 6 years ago ... at a very vulnerable time, feeling betrayed, ambushed, deserted, sacrificed ... and i did not even suspect [note to self: look at etym of 'bevroeden'] half of what was about to happen at that point ... and most of it delayed for a year due to psychosomatic collapse causing a social paralysis to metastatize into taking glyphosate deep into the gut, instead of realizing what just happened waking with a stomach burn after a nap, having eating from a doorstep dandelion i watered well before discovering 'straatsteenspleetplant' was a thing [free card game in pdf format at hortus.nl] .... hindsight [wijsheid achteraf] suggests i either did a sokratic booboo punishment submission ... or kinda wanted to inflict 'culpritation' on creepperps causing the effectiveness of their diabolic level unreflective stupidity to become the worst possible ... instead of rushing to hospital and have my stomach pumped which i didn't from 1: prior determination to never ever enter a hospital again and 2: sheer marvelling at surviving 4 continents and 20 metropoli in 40 years easily, simply dodging probs .. and the moment i put my foot down [to honor and emulate my folks but much too late, in and at their stead] i plummet into a 'feminance' 'fallhole' as the dutch put it.

I was attempting continuity of what my parents always strove to make me experience as normalcy but in fact always was the eye of world history storm, the kingpin drainplug jesus gene ... no wonder this came at me in a time i discovered the simple 18th century coffee table book image one encounters with a simple search for 'removal of mount meeperwat' [x.com/PietyPoet/media and elsewhere] .. but let me pivot back to ic .....

the bits in german are fun ... talk about cards .. collect the full set !!!

... and btw, glyphosate stopped my frequent 'prolonged and mourning phase record burial skip up glitch out crying

below i quote myself: Notes2ValumVotan and adjacent 2015-2020

i did a few small edits in the above next morn but the forum has no post edit feature ....
i got three reactions: lunacy, thunk provoking and a like

piety piet piety piet February 4, 2022 At 6:48 PM. i am failing to beat it .. can barely type anymore check my free thousands of pages tho.
https://twitter.com/@Prepare_Change

by the same author:
[2] "Glyphosate Herbicide Causes Antibiotic Resistant Bacteria, Kidney Disease, and Infertility," John P. Thomas, Health Impact News, 7/24/2014. http://healthimpactnews.com/2014/glyphosate-herbicide-causes-antibiotic-resistant-bacteria-kidney-disease-and-infertility/

http://healthimpactnews.com/2014/common-weedkiller-used-in-modern-agriculture-could-be-main-factor-in-gluten-intolerance/
Dr. Huber goes on to explain why those farming crops in northern climates, particularly wheat and barley, commonly use glyphosate herbicides. Dr. Stephanie Seneff published research earlier this year showing that most gluten sensitivities may not be related to gluten or wheat at all, but instead to glyphosate (See: Common Weedkiller Used in Modern Agriculture Could be Main Factor in Gluten Intolerance).

/home/p/Downloads/Drop-Tine Podcast -The official deer management, food plot & habitat podcast_ Glyphosate & Dr. Don Huber_ EIGHT PLUS DECADES OF WISDOM on Apple Podcasts_files/536x0w.webp
87 year-old Glyphosate researcher, plant pathologist, retired U.S. Army Col. and Emeritus Professor (Purdue Univ)., Dr. Don Huber has been shot at, stabbed and beaten to a pulp during his storied investigative career merely because of his long-time involvement in research on the impacts of Glyphosate (RoundUp) on plant nutrition, disease and health. Hits have been taken out on him by researchers and industry thugs who are in the tank (follow the $$$) with large multinational organizations and the makers of synthetic chemicals such as RoundUp. Jason proposes a broad spectrum of topics surrounding the Glyphosate/Roundup discourse including the science-based research that links Glyphosate, as a broad spectrum mineral chelator and gut/soil disrupting antibioic, to Chronic Wasting Disease in white-tailed deer.

> The evidence of human exposure to glyphosate: a review
> Christina Gillezeau,1 Maaike van Gerwen,1 Rachel M. Shaffer,2 Iemaan Rana,3 Luoping Zhang,3 Lianne Sheppard,2,4 and Emanuela Taioli ---------- Conclusion :::::: In summary, additional studies are urgently needed to evaluate levels of glyphosate and related metabolites in the general population and in workers, including across different geographic areas, apportioning the exposure sources and considering changes in these measures over time. Improved exposure assessment is necessary for conducting accurate risk assessments and high quality epidemiological studies. This work is crucial given the substantial increase in glyphosate use in recent years [1] and the current questions of carcinogenicity under debate by health and environmental agencies around the world [5].

Glyphosate toxicity is clear in human cells.
Most of epidemiological studies have not determined glyphosate dosage.
Epidemiological studies reported contradictory data.
Findings indicate that exposure to glyphosate is not complete safety.
Human health risk assessment of glyphosate exposure should be developed.

august: 14 items, 4.4Mb of which 1 3.5Mb pdf in french from 2016:
3- Conclusion
L'Ã©tude de Guilherme et al. (2014) est entachÃ©e de trÃ¨s nombreuses incertitudes et biais mÃ©thodologiques. En outre, aucune indication analytique du lot de Roundup Â® Ultra n'est fournie. De plus, l'espÃ¨ce animale utilisÃ©en'est pas d'Ã©levage mais sauvage et on ne peut pas exclure des variabilitÃ©s interindividuelles.
Concernant l'analyse, l'estimation du niveau de fragmentation de l'ADN a probablement Ã©tÃ© rÃ©alisÃ©e sans codage des lames, par catÃ©gorisation des noyaux en fonction de l'intensitÃ© et la longueur de la queue avant de calculer la valeur d'un indicateur, le GDI (Genetic Damage Indicator). Celui-ci n'intÃ¨gre pas les cellules non endommagÃ©es mais attribue le facteur maximal aux cellules fantÃ´mes alors qu'elles auraient dÃ» Ãªtre Ã©valuÃ©es indÃ©pendamment.
Ceci surestime de facto le taux de fragmentation de l'ADN rÃ©ellement liÃ©e Ã des phÃ©nomÃ¨nes gÃ©notoxiques et prend potentiellement en compte des phÃ©nomÃ¨nes non gÃ©notoxiques, ce qui apparaÃ®t totalement inacceptable.
Seul le pourcentage d'ADN de queue (Ã©galement appelÃ© intensitÃ© de la queue) est recommandÃ© pour l'Ã©valuation et l'interprÃ©tation des rÃ©sultats. Par ailleurs, aucune donnÃ©e historique Ã©tablissant les plages et distributions des tÃ©moins positifs et nÃ©gatifs pour le tissu Ã©tudiÃ© chez cette espÃ¨ce n'est prÃ©sentÃ©e ce qui rend impossible l'estimation de la compÃ©tence mais aussi de l'Ã©valuation de la significativitÃ© biologique des effets observÃ©s.
Les rÃ©sultats du test des ComÃ¨tes in vivo en conditions alcalines rÃ©alisÃ© sur les cellules sanguines d'anguilles
juvÃ©niles exposÃ©es pendant 3 jours Ã une prÃ©paration Ã base de glyphosate montrent des augmentations
statistiquement significatives diverses des valeurs de GDI lors des essais standard et modifiÃ©s (prÃ©sence d'enzymes) sans ou avec des pÃ©riodes de recouvrement. NÃ©anmoins, les valeurs de GDI avec enzymes juste aprÃ¨s traitement sont Ã©quivalentes voire lÃ©gÃ¨rement infÃ©rieures aux essais sans enzyme. Pour les essais avec FPG ou EndoIII, aprÃ¨s recouvrement, les valeurs obtenues Ã 7 et 14 jours sont du mÃªme niveau que celui du contrÃ´les nÃ©gatif juste aprÃ¨s traitement (et mÃªme celui de la version standard) ce qui dÃ©montre que ces valeurs
sont dans des gammes de valeurs nÃ©gatives. Ces Â« effets Â» ne peuvent donc pas Ãªtre considÃ©rÃ©s comme
biologiquement significatifs.
Le rationnel de cette Ã©tude n'est pas correctement Ã©tayÃ©. En effet, les auteurs ont recherchÃ© des lÃ©sions primaires de l'ADN jusqu'Ã 14j post-exposition

alors qu'il ne peut pas y avoir d'accumulation de lÃ©sions primaires de l'ADN. De plus, le glyphosate a un faible potentiel de bioaccumulation (OMS, 1994). Finalement, si une augmentation avÃ©rÃ©e de la fragmentation avait Ã©tÃ© observÃ©e, il n'aurait probablement pas pu Ãªtre attribuÃ© Ã un effet direct. Globalement, sur la base de ces donnÃ©es, on ne peut pas conclure Ã un effet pro-oxydant immÃ©diat ou Â« retard Â»
ce qui apparaÃ®t cohÃ©rent avec l'Ã©tude prÃ©cÃ©dente (2012b) qui ne dÃ©montrait pas de variation significative des systÃ¨mes antioxydant investiguÃ©s.
---
page 60 / 73 -- septembre 2016Anses â€¢ rapport d'expertise collective ------ Saisine glyphosate nÂ° 2015-SA-0093

L'Ã©tude de Guilherme et al. (2014) ne peut Ãªtre utilisÃ©e, ni pour caractÃ©riser le danger gÃ©notoxique de la formulation Ã base de glyphosate, ni pour Ã©lucider un possible mÃ©canisme d'action gÃ©notoxique. Au-delÃ de trÃ¨s nombreux biais mÃ©thodologiques dans des conditions expÃ©rimentales trÃ¨s limitÃ©es (une seule dose), l'interprÃ©tation n'est basÃ©e que sur les rÃ©sultats d'un test statistique rÃ©alisÃ© sur un indicateur surestimant le taux de fragmentation de l'ADN en intÃ©grant les cellules fantÃ´mes. Sans donnÃ©e de distribution des t

> Glyphosate toxicity ------ Neil Long ---- Nov 3, 2020
> Glyphosate is a widely used herbicide. It can cause gastrointestinal corrosive symptoms and due to the surfactant that is present a severe metabolic acidosis, hyperkalaemia and cardiovascular collapse can occur. --------- Toxic Mechanism --- The toxicity of glyphosate is largely due to the surfactant and other co-formulants. The mechanism is poorly understood but may involve disruption of cellular membranes and uncoupling of mitochondrial oxidative phosphorylation.

International Journal of Environmental Research and Public Health -- 5 years ago ---- IJERPH, Vol. 16, Pages 2734: Glyphosate's Synergistic Toxicity in Combination with Other Factors as a Cause of Chronic Kidney Disease of Unknown Origin ------- Sarath Gunatilake, Stephanie Seneff, Laura Orlando -------- Chronic kidney disease of unknown etiology (CKDu) is a global epidemic. Sri Lanka has experienced a doubling of the disease every 4 or 5 years since it was first identified in the North Central province in the mid-1990s. The disease primarily affects people in agricultural regions who are missing the commonly known risk factors for CKD. Sri Lanka is not alone: health workers have reported prevalence of CKDu in Mexico, Nicaragua, El Salvador, and the state of Andhra Pradesh in India. A global search for the cause of CKDu has not identified a single factor, but rather many factors that may contribute to the etiology of the disease. Some of these factors include heat stroke leading to dehydration, toxic metals such as cadmium and arsenic, fluoride, low selenium, toxigenic cyanobacteria, nutritionally deficient diet and mycotoxins from mold exposure. Furthermore, exposure to agrichemicals, particularly glyphosate and paraquat, are likely compounding factors, and may be the primary factors. Here, we argue that glyphosate in particular is working synergistically with most of the other factors to increase toxic effects. We propose, further, that glyphosate causes insidious harm through its action as an amino acid analogue of glycine, and that this interferes with natural protective mechanisms against other exposures. Glyphosate's synergistic health effects in combination with exposure to other pollutants, in particular paraquat, and physical labor in the ubiquitous high temperatures of lowland tropical regions, could result in renal damage consistent with CKDu in Sri Lanka.

she went to lose 67 pounds after 2012
By Laura Wishik â€¢ June 26, 2012 6:25 pm
Finding a new life: A diet becomes a path toward better health
"You're a shadow of your former self!" a friend called in greeting to me. What? Oh, yeah, she means the 67 pounds I've lost.
For anyone who, like me, has been overweight since childhood, this is a tale of hope.
I was 9 when my mother put me on a diet for the first time. I blame it on the French. They created croissants, after all. It didn't help that my parents thought sports were for people (actually, boys) who didn't go to college. They considered physical activity dangerous.
Diets became semi-annual tortures â€" weeks of lettuce, cottage cheese, celery and sugar-free Jello. Yuck!
Between diets, food was my comfort when I was down and my reward when I was up. I went to counseling and the 12-step program for over-eaters. I lost weight, then gained it back.
By last year, walking up hills made me breathless. I barely fit into an airplane seat and had to ask for an extension for the seat belt. My world was shrinking as I expanded.
I began looking into gastric bypass surgery. It seemed the only way I could possibly lose over 100 pounds. But I wasn't eligible for surgery, because I had not (yet) developed diabetes or heart disease. I felt like giving up.
In Sept-ember, I decided to take Islander Kathy Abascal's class about foods that trigger inflammation. For 15 years my back and shoulders were so painful that a light touch

made me scream. Perhaps this program would help. Kathy has her students refrain from eating certain foods for three weeks, including sugar, sugar substitutes, alcohol and wheat. When the three weeks ended, I didn't want to go back to eating those foods. I felt liberated! I wasn't obsessing about the next bowl of ice cream or pasta. I realized that eating sugar or wheat makes me crave more and more.

I adopted some new behaviors due to Kathy's program:
â€¢ No grains for breakfast, only protein, vegetables and fruit. I usually have an egg scrambled with spinach, mushrooms and tomatoes. A little cheese, tofu or ham gets added occasionally.
â€¢ Instead of "grazing" all day, I eat three meals and two snacks at set times. Snacks are usually 10 almonds and a piece of fruit. Instead of buying lunch I bring it to work, saving money and calories.
â€¢ Every meal other than breakfast consists of equal thirds of protein, grain and vegetables and/or fruit.
â€¢ I used to have a big "bedtime snack." Now I don't eat anything after dinner.
â€¢ I rarely drink alcohol. Did you know alcohol has nearly twice as many calories per ounce as meat or potatoes?
â€¢ All food is fresh, not processed. Eating only organic food is too expensive, but I now grow five varieties of lettuce in window boxes.
---------- My spouse Gary, who does the cooking in our family, jumped on board whole-heartedly. Our kids, not so much, but at least the adults are modeling healthy eating.

... she even got a horse at 56

you know the 'marrakesh express' tune by csny
workin on the 'ziopen express' adaptation merged w 'comin to get u haha' recently played on the long runnin lowbrow call in show on dutch nite radio1, strictly ueberwoke, always supersuprised by 'incidents' [of trends, early warnings, yet agains or plague magnitude logic sequences they remain in stubborn denial of cause taught and/or born that way inescapably and never helped out of that 'strayed thicket tangle]

Mark, i know of at least 1 class action lawsuit over glyphosate [RoundUp ingredient, oldest, smallest amino, slightly mangled to fool the body into letting it thru to it's proper place where it promply fails to perform and begins the laming, clogging leading to 'cancers' - congestions as the late Geerd Hamer, a controversial althealer explains clear enuff].
it was a thousand proven victims alloted the 11 billion compensation doubling as company fine .. which they are as glad to pay as continuing to bribe science and justice, rather than doin an 'anthrosuitable' version of their famed 'terrminator' seed, immune to the protection GMOed into them.
They roll over and preserve the patents via periodic new mixes [notoriously more harmful than the ingredients are singly].

How big a percentage of total victims do you think the suitmembers are ... would that number equal overdose deaths roughly ??? How many cancers are not attributed to the cause i described and how deliberate is that? I was refused point blank when asking the doctor to A: test for glyphosate, B: ask his colleagues stateside about the research used in the lawsuits.

i am confident a day will come you see fit to multiply the reach of your cause many times over, bundling w such cases, bluntly put, both categories matters of filthy, illicit and unethical gains .. but that magnitude can spiral past the fan for deafening impact with the biosphere's roof [ringing as long as the vietnam was is bygone but for not all cleaning all that up either], once you get past and over the anthropocentric focus and realize this is a top thanatopian class of sin 'commitery' .. i mean business model [occupied turtle isler crews leveraged the 1880 Leipzig courtcase against Julius Hensel which his slanderers, the then juvenile pharmafiyids won. Monsanto to Bayer is a 'goin home' perversion of sorts visavi what i have recommended on countless threads pretty much since visiting Oz in 1997]

RECAP: stat number juggling and relabling, and all that good old scientific measurement reliabilty went out the window and clear across the ocean in no time [got my lessons from Douglas Duane Dietrich re balloon wars a long time ago, sadly he has gone full on lefty fascist] right after Fukushima. John ShewChuck on twitter shows you climate data frauds if you look.

The deadly sharp spikes in demo- and sociographies, caused by what i call 'swarm tecnicians', a type of #kommisarism that namechanges to outlive, evade and outrun consequences of bad reps are really negligible in the face of biocidal effects perped via some of the substances involved. People focus distracts from that viability paralysis and you are a good example of that. I'd like to know what sort of hurt makes George Webb be so firmly distracted from zionist crime .... hashtag NotAllInjuns i guess ..... sigh ...

@realstewpeters tsjek Mark's video thumb .. i think my work today ties the occupied turtle isles +thensum in all sorts of unfathomably btfl bows .. #ValumVotan was on about lots of electriCities, .. an epsom salt footbath delivers a good few and ankle bracelets sup ziopenwalls

https://drillordrop.com â€º 2021 â€º 02 â€º 28 â€º death-of-anti-fracking-campaigner-ian-crane
Updated: Death of anti-fracking campaigner Ian Crane
Ian Crane broadcast daily video updates from Kirby Misperton when Third Energy was preparing to frack in 2017-2018. His fortnightly online programme, Fracking Nightmare, became a voice piece for many in the anti-fracking movement. He also produced and presented the documentary Voices from the Gasfields about the experiences of landowners in shale areas of southern Queensland in Australia.

Tribute to the life of Ian R Crane | Alliance For Natural Health ---- 9. We celebrate the life and work of a dedicated activist, dissenter and all-round force of nature. It was with deep sadness that we learnt of the death, last Thursday, of Ian R Crane, one of the world's most outspoken freedom advocates, after a battle with cancer. Ian was a former oil industry executive turned activist.

> While using philanthropic funds to bankroll a private biofuel business might seem ethically questionable, the supposedly beneficial target of making an antimalarial molecule may not have been so positive either. In 2013, after many years of research by the UC Berkeley Laboratory and Amyris, it was announced that the French pharmaceutical company, Sanofi, would launch the production of synthetic artemisinin. Commercial production of the compound was hailed as more affordable than naturally grown artemisinin, which is farmed in countries like Kenya, Tanzania, Madagascar, Mozambique, India, Vietnam and China. However, what was not mentioned during all the hype around the synthetic production of the compound was that artemisinin farmers in these countries would lose their livelihoods as a result of the sale of the synbio version. In the hype and supported by philanthropic money, prices for artemisinin crashed and some natural artemisinin extractors were shuttered. Eventually, even the synthetic product proved too expensive to sell.

June 16, 2023
https://www.gatesnotes.com/Visiting-China

> Solving these problems requires innovationâ€”both new tools and new ways of doing things. China has eliminated diseases, including polio and malaria, within its borders, developed drugs like artemisinin that have saved millions of lives around the world from malaria, made great strides in poverty reduction, and has made significant investments in clean energy and climate adaptation. So I was looking forward to seeing what's changed since my last visit four years ago.

1h20 jeffrey smith and amy hart film on GMOs ... w polish subtitles ... they spell it 'Glifosat' btw ... huge segment on autism ... Kathleeen DiChiara FDN-P functional nutrition practitioner .. what's the 'drop-D' all about?

butterflies and bees productions 2018
8.7/ 10 at IMDb ---------- While the debate continues about GMOs, Roundup and other toxic pesticides, this powerful film shares remarkable stories of people who regain their health after discovering the secret ingredients in their food and making a bold commitment to avoid them. At the heart of the story is Kathleen DiChiara who always worked out and ate right - or so she thought. When her health and the health of her family fell apart, she was determined to figure out why. When she discovered the secret ingredients hidden in their food and removed them, the results were dramatic. The film shares many other powerful stories of people who regained their health after changing to an all organic diet, free of GMOs, Roundup and other toxic pesticides. Skin rashes cleared up; tumors disappeared; digestive issues settled down; infertile couples now have happy babies; cancer patients are now cancer free; and autistic children are now off the spectrum. These experiences are backed up by physicians, scientists and experts who explain the science, and the political history, of GMOs and pesticides - particularly Roundup and the key ingredient, glyphosate, which is sprayed on many crops and ends up on our table. Artfully directed by Amy Hart and leading anti-GMO consumer advocate, Jeffrey Smith, this film is the perfect blend of heartfelt stories and scientific information that may inspire you to ask, What could happen if I removed the secret ingredients from my kitchen?

The BEST Article on Glyphosate with Comments from Jeffrey Smith
https://responsibletechnology.org/the-best-article-on-glyphosate-with-comments-from-jeffrey-smith/#comment-173

Hi JS, i am dutch and your age .. in 2020 my doorstep herbs were mistakenly and or maliciously taken for weeds and 'RoundUpped'. Even tho i realized faintly this might be the case, my neighbours had already half destroyed my life w pedo accusations .. still echoing today, faintly also but you know them cuckwoo 'issues', they can flare up anytime.

I fell into a paralysis between depression over reality and my mistaking it. Taking a huuuuge risk just to punish myself for thinking bad/low of 'normal' dutch people [kneejerk reflexive knowitall stupidity default levels of satanism widespread].

Ignoring the true cause one set of symptoms after another triggered tissue weakening memories distracting from aforementioned too hard to face squarely reality and i ended up with a paralizing hand and a neck tumor [old RSI triggered] but my vow to never ever enter a hospital again after seeing the way they treated my 88yo mother in 2013, was finally broken by a few recurrent throatlocks [no doubt directly related to the constipation and consequent biofilm build up nausea - revealing info about the doctors involved in full{er} account below] but after a first Chemo i finally began to order the stuff i had read Seneff's writing on YEARS PREVIOUSLY!!!!! I apologize for not taking her and your work much more seriously and personally. I always thought i'd be spared the worst if only i could reach the wheelhouse and turn that tanker at the same dime n quarter drop rate of and in sync with topmemeflows in my topply topheavy escapist semi jews illusionist 'wannastate' of beeing.

Meanwhile tho, gutflora was clearcut in phases. Food allergies doublin me over w nitely cramps took 'care' of that ... actualy if not kicking, then greatly reducing fat intake proved harder than intending to after realizing the necessity .. i had a very sticky goin on stuck stage of two, .. staggering actually ['stugheid' comes w mental territories i guess].

i learned to help out my numb colon much much too slowly but once Artemisia began to keep me kidney-painfree and i learned a thing or two about fulvine [which blows thru toughest shit if necessary], to wit, critical dosage fine tunement, i am at least stabilizing ... tho still at a mere 5% of my former [recovery] strength.#

I hate legalistics even more than my neighbours but do think i'd make a good mascotte for a giant class action contra Monsanto / Bayer .... and the entire chemical industry as far as i'm concerned ... i'm a hippy squared Quinted and multifacetted even farther, further oudasight than ever seen [sites up since 96 tho], let alone understood by hominids.

I am a grippy with acresusa.com as one of my foundational guides thru america since the eighties and John D Hamaker led me to Julius Hensel, first great man to lose in court visavi the pharmafiya, prolly causing a 'growth' spurt no smaller than my somewhat socratic act may have been the dissolution of the last breach defender before a global power grab heist by 'them' kinds of 'disposizionoids'

I was able to tie the mineral metabolism of the biosphere to some historic phases in which they were

understood, properly mimicked and practiced: Samudra Manthan ... a memeplex and practice that made it all the way to the Far East .. just google 'meeperwat'. Of course the personification tendencies of wild success causing the drama fixations and fictation [gamerworlds citizenry is truly the dorky orcy bane of the biosphere and all attempts to defend and restore respect for it].

= no wonder that an ancient small amino acid is responsible for intake

dude, challenge for you: do a dive on the sims and paras between the pied piper and jezus .. with a review of link below as aside, start now and beat the crowd:

https://www.archive.org/details/piety-piet-close-up-or-closeted-up ... page 267 to 531: by hindsight far pHar{m} worse than creep neighbour's stealth Glyphosate vs watered doorstepstonecrack dandelion .. and the struggle to emerge from the psycho-paralytic pit of unbelief and refusal to accept that jealousy, even the most malicious and deadly can easily hide behind the common usage rules, decency acts dialed in by the likes of Dupont and Chemours, nestled right at the mouth of one of the world's most infulential Deltas, twisting that 'fluflo such that Hell is real and rite {t}here.

rewrite on the 13th of july 2024:
https://www.archive.org/details/piety-piet-close-up-or-closeted-up
close up? yes, closeted up? been a kinda private person in many ways, yes ... but nearly closed up?
Read the attempt to shut me down ... page 267 to 531: a crime, by hindsight far pHar[m] worse than creep neighbour's stealth Glyphosate 'alibidinally' / ostensibly 'gainst doorstepstonecrack dandelion, despite days of obvious daily watering evidence, ... a weed sprouts in hearts and minds of broken humans [onkruid exists in minds and hearts of onmensen only, onkruid is a creation of hellish humans and dandelion is a powerful herb].
Who knows how many more years i will have to battle the effects of glyphosate cause i refused to believe the people that had already broken my life and in more ways than i suspected then?

as per jesus complex:
i'll grant Joh Uhler that it's worth examining wether i dismissed suspicions perhaps the exact same [but 'miroreversed'] way in which [so, as reflection of the phAct] i refused to see my actions in the worst possible light or at least as dubious as obviously they appear in an 'overboard' crowd who'd rather mistrust eyewitness reports, do not verify but prefer to unleash inflamed imaginazions via 'remote', 'safely' in their safe spaces.
I for one, refuse to "let me be mis understooood" and lucky me, i never left intentions off to the side, or as compensatory offside and too far outasight [reffing my hippie to grippie evolvature, an intention i have evidence for stating from around the early noughties#], on the contrary, i was always on the look out for opps to feed'm into the weave from the tiniest clay speck n smear on up into larger and larger ones, god knows clay scales .... the nebukadnezar dream works in reverse ...

= 'grippie'=15x and grippy=3x .. in 993 p worth of 'adjacency' notes for 5y after 2015
the 6 years before that i used it 13x in 750 pages
13x also in the preceding 422p 4 4y from 2011
43x in the 1959p first volume w a digest of the eighties and nineties, then daily entries from '99, broken

up maybe 10x av. a moon each since ...
here's the ckiqur: no gripology

anyway, .. Biden would say ... to pick back up at why not just me but we suffer 'far far worse [pharm harm] ... will have to wait after i finish the twist in my recent fate:
to wit, the struggle to emerge from the psycho-paralytic pit of unbelief and refusal to accept that jealousy, even the most malicious and deadly can easily hide behind the common usage rules, decency acts, installed, dialed into this region by the likes of Dupont and daughter Chemours, phonyin it up into ponyin up toxfree worldwonder windmill custodian status [modern ones are an affront to that heritage in every way tho their were flaws to being with, explained elsewhere, to do with sedimentation kept out -buitendijks].
Said companies nestled right at the mouth of one of the world's most infulential, and as all of them, most vulnerable deltas, twisting that 'fluflo such that Hell is real and rite [t]Here, .. as a reward for their 50s Ohio waste crimes?

re autism : vax .. that's just the litenin rod to distract from the 'inescapable' push against more sensible peeps than the gullible fearfasced wookeywaps [who call'm 'waps', which they themselves are, instead of snaps]. Thanatopia has everywhere ambitions.

Witchcraft, Matriarchies, and Deep History - Stone Age Herbalist | Maiden Mother Matriarch 39
Maiden Mother Matriarch with Louise Perry
22K subscribers -- 1,453 views Nov 13, 2023 Maiden Mother Matriarch Interviews
My guest today is the writer and archeologist Stone Age Herbalist, author of the Grey Goose Chronicles substack, and also the book Berserkers, Cannibals & Shamans: Essays in Dissident Anthropology.

We started with a discussion of the mystery of the paleolithic Venus figurines: protective amulets, matriarchal symbols, pornographic objects? No one knows for certain what they were intended for, but these objects have been the focus of intense interest

ever since their discovery in the nineteenth century.

In the extended part of the episode we moved on to an entirely different time and place: contemporary Ghana.

Vol. 115 | No. 41 ------- Significance: Increased mortality of honey bee colonies has been attributed to several factors but is not fully understood. The herbicide glyphosate is expected to be innocuous to animals, including bees, because it targets an enzyme only found in plants and microorganisms.

i hate the woollee science jargon. it stuffs and buffers the satanically biocidal truth up and away from stark and plain clarity. This affront to a most ancient and small building block for all of life is why money itself can reach the toxicity levels it does, Homo Collaterrated

piper operations.
When a national iatrogenocide staged Rat Park lockdown-reward-release operation is conducted, with poison as the reward, we have seen the epitome of H$BC evil.
----------VictoriousXotzalci1 day ago: Its interesting that altho both jewish and muslim cultures are tribal or monoculture and extremely racially motivated that many people support either of them with no real concept of the layers and layers of systemic abuse in both cultures , perhaps being confused by their own countries, cultures layers and layers of abuse and history, centrally recorded or not. Supporting either culture is giving credence for revenge instead of justice and this reveals that humans are very affected by layers of abuse in their environ and sway towards revenge not only in their own situations at the micro and macro levels but for others they really dont have any relationship with or deep unstanding. I think perhaps our own personaly negative experiences may be swaying our voice and will to venegence and not justice, which from a socially judicial point of view, is wholly imature, wounded, ireverant and malicious. We really do need mental help to stop our hatred from swirling out of control at a personal level and to stop supporting conflict with the hopeful outcome of the most harmed in a situation becoming the dominant (eventually), in an archtypal conflict of good and evil . Viewing both parties in conflict as wounded persons could help solve or initiate a new pattern of behavior with a flavor of healing and a positive outcome for the children and innocent . I think the 'World Department of WAR Initiation Cult', should be confronted as being singularly responsible for funding the murder and molestation of children everywhere on earth purely for malice and profit sake.

Debbie Lerman- Dec 04, 2024
In Holland and Germany, Pandemic Response Was Biodefense, NOT Public Health
It's becoming ever more evident that the Covid pandemic was coordinated globally through military/intelligence alliances. -------- In previous articles, I analyzed government documents showing that the Covid pandemic response in the U.S. was not designed or led by the public health agencies.
Rather, it was a biodefense lockdown-until-vaccine response, led by the National Security Council and FEMA/Department of Homeland Security (DHS).
I showed that the same pattern was repeated in the UK.
And I posited that this was a globally planned and executed response â€“ overseen by what I call the Biodefense Global Public-Private Partnership (GPPP).
The lockstep in which nearly all Western countries responded to the "novel coronavirus" in early 2020 suggested that national governments were not in charge. Rather, a global plan was being executed on behalf of a larger and more powerful entity, or entities.
This table describes the conglomerate I believe was in

charge â€“ the Biodefense GPPP â€“ including its numerous, world-encompassing components (discussed at length in a previous article). The table shows how the biodefense complex scales up from national to international components. This is true not just in the U.S., but also in the many countries that responded to Covid in a nearly identical fashion.
----------The Covid Coup in Holland
As mentioned in the description of the Biodefense GPPP above, it was most likely through military and intelligence alliances, including NATO and the Five Eyes, that the Covid pandemic response was coordinated.
This has recently been confirmed by the Dutch Minister of Health, as reported by the Centre for Research on Globalization (globalresearch.ca) on November 8, 2024:
.. Dutch Health Minister Fleur Agema has acknowledged in parliament that the Dutch pandemic policy is taking place "under the direction of National Coordinator for Security and Counterterrorism (NCTV) and Defense" and must comply with "NATO obligations".
-------Dutch researcher Cees van den Bos, who contributed directly to this Substack article, notes that "during the Covid pandemic, Fleur Agema was an opposition leader who was critical of the Covid response in the Netherlands, which makes her statements all the more explosive." He explains that "she was opposed to vaccine mandates and lockdowns, with a loud voice in the Dutch parliament. But since she became the Minister of Health back in July 2024, she clearly changed her mind, saying that she follows orders from the NCTV based on NATO obligations."
As noted by GlobalResearch, van den Bos was already reporting on this situation at the end of 2022, when he "accused the NCTV of having committed a â€˜coup d'etat.'" The article continues:
..The crisis management was almost everywhere in the hands of the military and intelligence services, and in our country [Holland] it rested with the NCTV.
Van den Bos reports that "the NCTV, which is the Dutch version of the U.S. Department of Homeland Security (DHS), took the lead in every democratic process."

> Josh: you know in your bowels there's a lot of microbiotic 'gut flora' that assist with digestion, and it makes me wonder if there's more to this gut flora than we suspect. i bet you indians and mexicans have way better gut flora for eating spicy contaminated gross foods, but what if they're even more important? kind of like the worms that live in Fry in Futurama and make him sexy and smart. Like if you take the gut flora from the smartest people around the world and mix them together and do a fecal transplant (that's what it's called) do you get superpowers? and you know the flora passes matrilineally, so if flora does impact your behavior, it would explain why jewishness is also matrilineal.

a solid poo page, inspired by sentiments expressed on the latest stream ...

https://pietthepietypoet.substack.com/p/surveying-glyphosate-news?sd=pf

recruiting the 'dead' [crushing rocks] for life, to 'put them to life' [help life 'weather' itself, .. all life] is grounding and makes whole.
But the schizomirror[r]age which recruits the living to betray themselves and 'that {sense of} self' takes and makes a whole .. lodda dirty money.

As a survivor of a single dose of glyphosate on a single doorstep dandelion, i should not be shocked to find most posts here [sample below#] just as dumb as the tier one [reflexive] satanism of my neighbours, triggered [to flame out deathplot execution aimed at an espalier apple tree between our front doors] by complaints of real property infringement rep[l]ayed / reflected with creepsneek measures to counter a delusional one [the apple tree 'threat'. i told her i'd prune along the property line but in fact i had not done that at the back of the house which they 'compensated' with overreach after losing patience; birds died ... my light sensitivity lost refuge, etc]

= Chemophobia - the fear of chemicals - is a public health crisis

Low science literacy and lack of biology, chemistry, and toxicology knowledge exacerbates this global health threat.
https://open.substack.com/pub/immunologic/p/chemophobia-the-fear-of-chemicals

I undestimated this kind of evil and told the small voice warning me [as i was about to chew on a few doorstep dandelion leaves] months after the sudden and mysterious decline and aimlment of the apple tree .. it's hanging on for dear life post transplant as i speak
... that it was indecent to suspect the worst [the leaves looked droopy all of a sudden tho i had watered for days in a very hot period .. and i had meanwhile seen them use that bottle .. but STILL not suspecting them of apple tree murder, go figure ..]

An hour later, post nap, i realized my mistake and sank into a deep psycosocial paralysis and denial .. even as the poison raged wilder and wilder for months.

the topdownmoneyfilth plotters 'thrive' on dumbed down humans and none so much as the dutch ... it's dat delta karma ... DEATH TO BIOCIDAL THANATOPIASTS!!!!!!!!!!!!!!

One of the best ways to prove necessity of this for ethics to improve over time via this tried and tested method [on explosive violent impulses .. gotten waaaay worse with all the stuff said peeps produce and folx like Dietrich Klinghardt {re}mediate against], is the fact they don't come running ... that is DK isn't offered a fortune by Bayer/Monsatan to heal me in order to prove their product is a innocent A OK, nothing to see here. All about patent protection and prolongatoin via endlessly and minutely differing remixes i guess ... cachinggggg!!!!!!!!!!!!!

> Prof_GD_Foster == â€ª@profgdfoster.bsky.socialâ€¬ -------- Glyphosate-resistant weeds have evolved in the UK for the first time ---------- newscientist.com/article/2463...

Please Prof, turn into glyphosate detox juice ASAP!!
i suffer complete paralysis in parts of my digestive tract and if i did not have the fecal plasterblaster fulvic 25 [a soil amendment made of turf juice .. kudos to #StephanieSeneff et al btw] .. i'd have fallen prey to pharmafiyID protocull.

https://substack.com/@allthingstox/note/c-77258725?
Brian H Mathison PhD -- Nov 15

From 12Nov2024 - Responding on a glyphosate thread X - Kevin Folta/Simon Maechling (and maybe a few others)
Arbitrary & capricious verdicts more than just juries.
Charles Benbrook, Robin Mesnage and William Sawyer involved with glyphosate litigation (independent science?); believe by 2022 Benbrook had invoiced ~$1M, Sawyer invoiced $>2M; nothing in comparison to 40% of >$10B + fees.
Think best to reference Glyphosate is not carcinogenic, mutagenic, or reprotoxic, as concluded by the most recent scientific assessments by EFSA/ECHA. While acknowledging knowledge gaps, these assessments represent the most comprehensive evaluation of a pesticide ever conducted.
Following this saga for some time now. Not much has changed in almost a decade by those that adhere to scientifically complex guidance, guidelines, and definitions. These scientists being without conflicts of interest and with precautionary dispositions.

https://substack.com/@allthingstox/note/c-78833998?
Harvard Law Review x.com/hashtag/glyphosate The Third Circuit Court of Appeals' decision in Schaffner v. Monsanto created a circuit split regarding whether the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) preempts state-level failure-to-warn lawsuits. This isn't a casual read; it's well-sourced with legal citations. Unlike typical social media posts, it delves into complex litigation. While informative, it leans towards a plaintiff-friendly viewpoint, potentially overlooking nuances.

The Curious Case of Belgium ----- 5307 Views - 3 years ago ------ Craig-Paardekooper ------ 2,300 Subscribers
Belgium exhibits extremely high % of severe adverse reactions compared to the other European countries.
The hypothesis being put forward here is that Belgium is the site for the finishing plant for all European vaccines, so the people of Belgium receive the vaccine batches first after manufacture.
The mRNA in the vaccines seems to degrade quickly over the first 30 days, and there is a corresponding decrease in toxicity over that period. The % of reports that are severe is three times higher for vaccine deployed within that 30 day window.
This is one of those instances where its good to be last - or at least as far past the expiry date as is possible.

Death by Alphabet for Pfizer Vaccinations
15329 Views - 3 years ago ------- Craig-Paardekooper
2,300 Subscribers --- Sensitivity - Normal (BBFC 12)
For each Pfizer lot I counted the number of deaths, disabilities and life threatening illnesses. I summed these counts to get a total severity -
Total severe = deaths + disabilities + Life Threatening Illnesses ---------- Then I calculated the % of reports for each lot that were severe --------- I reasoned that if a lot was more toxic, then a greater % of its reports would result in death, disability or life threatening illness. Conversely. if a lot was more harmless, it would result in a significantly smaller number of deaths, disabilities and life threatening illnesses. This seems like common sense.
The results were interesting.
Pfizer lots vary in % severity by 40 fold.
They also vary alphabetically. As the alphabetic identifier of the batch code ascends, the % severity decreases.
It is also observable that the pattern of variation between the alphabetic groups for Pfizer is very similar to the pattern found between the alphabetic groups for Moderna.
Extraordinarily, they even embody a similar coding system.

Sanofi has heavily invested in mRNA vaccine production in France and is an undisclosed financial supporter of Hospices Civils de Lyon, whose

Someone [more presentable than me] must write a [THICK] book about the snake in religion and iconography as the symbol and stand in for digestion, the actual shape, flex and mobility during the process of turd formation and ripening as it were ...strides, strokes, strata, strictures and strategies on coil and rollrolecalls of readying routines. Within this kinetic and surflike borderlining stand and fall all dance routines as a kind of hands off kneading.
Conscious focus on all this doesn't come natural until attention gets drawn there due to factors that obstruct, delay, compromise and problematize these innately mother of reflexive type goins on

i am struggling with the right balance and dosage of fulvine/fulvic [should switch to sjilajit really], black cumin seed soakwater, linseed and zeolite clay. i don't get it right very often just yet ... and started a year too late to prevent a giant 'tumor' [congestion, as Geerd Hamer correctely 'renicks' it].

nhk jap .. 10K/4d
https://www.youtube.com/watch?v=BPGWFLiYAWM
this has to be up there with the best our dear dear pharmafiyacs are willing to 'concede' regarding constipation .. mentioning lifestyle and a lengthy bellydance segment to close is the closest they get to natural methods and products. On the way there we learn about a precolon new sidehole drilled into a severe patient which works to satisfaction.

Swindoll Chuck on detox 3h .. he beat 'cancer' in 2013
https://www.youtube.com/watch?v=3FThXjsIlas
i can haz timestamps?
timestamps on screen at 13 minutes .... a suckie strategy but better than nothing .... He does a giant enemy talk thru
and claims the acid burn sensation it leaves on his sphincter is an effect of draining liver toxins ... that's twistin logic beyond the pretzel kind but hey, to each his own. And he does claim to have completed the process.

hey tsjukkie, thanks for your soldiering on ... i suggest some if you ask me vital links to lengthen that chain of yours .... black cumin seed, and fulvine / fulvic acid [dessicated turf juice is all sjilajit, 'mined' hi in

the himalayas, is]. These supplements reach where no enema can ... they mean the diff between dry pellets and footlong flexturds for me. i learned the hard way ... too slow to even prevent 'chemo' which i broke off after one of planned 6; my doctor refused to ask colleagues for evidence used in the Round-Up class action trials or Pillod vs Monsanto. Another refused to test for glyphosate. Big money controls meds and most courts.

I eventually overcame instant sociopsy paralysis, but not the laming of peristalsis, lower colon still numb and i have to 'push-start' evacuation, wetting a finger w pee and pushing the edges of my ass inwards. These effects were pretty much immediate, as was the stomach burn from consuming a mere few dandelion leaves ... watered on my doorstep a week beforehand.
Did Brandy Vaughn fall ill or was she poisoned? follow Mark Kulacz at Housatonic.Live and fund out. Was i poisioned maliciously?
Urgent Advice: do not practice love of weeds among the dumbed down and druthers drained dutch, not even in a small village .. not even one you are born in .. not even one where your father fed half the parents of an ever dwindling amount of natives. it's awful risky. do not gamble with your life. keep your faculties of suspiczionz abreast of protocullish pharmafiyacs

Conclusions These results show that the application of charcoal, sauerkraut juice and humic acids in feed of cows can decrease the excretion of glyphosate by urine and influence enzymes and substrates of treated animals. This improved the animal's health and induced an appropriate immunological reaction to C. botulinum [9]. It must be noted that these animals were also deficient in manganese and cobalt so that additional mineral supplementation with these essential minerals should be evaluated. Reference

Oral Application of Charcoal and Humic Acids Influence ---------- Selected Gastrointestinal Microbiota, Enzymes, Electrolytes, and Substrates in the Blood of Dairy Cows Challenged with Glyphosate in GMO Feeds ---------- Henning Gerlach 1 , Achim Gerlach 2 , Wieland SchrÃ¶dl 1 , Svent Haufe 4 , Bernd Schottdorf 3 , Awad A. Shehata 1,5 and Monika KrÃ¼ger 1 * -------- Institute of Bacteriology and Mycology, Veterinary Faculty, University of Leipzig, An den Tierkliniken 29, D-04103 Leipzig, Germany WaldstraÃŸe 78, D-25712 Burg, Germany -------- 3 Carbon Terra GmbH Gutermannstrasse 25, D-86154 Augsburg, Germany --------4 WH Pharmawerk WeinbÃ¶hla GmbH, Poststr. 58, D-01689 Weinbohla, Germany --------5 Avian and Rabbit Diseases Department, Faculty of Veterinary Medicine, Sadat City University, Egypt 1 2
----------Abstract The present study was initiated to investigate the influence of oral application of charcoal, sauerkraut juice and humic acids on specific gastrointestinal microbiota and selected enzymes, electrolytes, and substrates in the blood of dairy cows fed GMO feeds containing glyphosate. A total of 380 Schleswig Holstein cows suffering from symptoms of chronic botulism were fed sequentially with 400 g/animal charcoal daily for 4 weeks (weeks 1-4 of the study), 200 g/ animal charcoal (weeks 5-10 of the study), 200 g charcoal and 500 ml Sauerkraut juice/animal (weeks 11-14 of the study), 120 g/animal humic acids (weeks 15-18 of the study) 200 g charcoal and 100 mL Aquahumin/animal (weeks 19- 20 the of study), or 100 g charcoal and 50 mL Aquahumin (weeks 21-22 of the study) followed by 4 weeks without any supplementation. There was a significant reduction of glyphosate in urine following supplementation with a combination of 200g charcoal plus either 500 mL sauerkraut juice or humic acid. From all of the parameters investigated in blood and urine, distinctive effects were only seen as a lack of manganese and cobalt and a significant reduction of creatinine excretion by urine. All other measured parameters such as creatine kinase (CK), alkaline phosphatase (AP), glutamate dehydrogenase (GLDH), glutamate oxaloacetate transaminase (GOT), and cholesterol, urea, and blood creatinine) were not significantly changed. A significant increase of fecal Gram-negative bacteria and enterococci were only seen at week 8 (200 g charcoal/d) and week 20 (200 g charcoal+100 mL Aquahumin). In conclusion, a charcoal-sauerkraut juice combination and humic acids reduced glyphosate excretion by urine and led to the improved health of animals. ---------

 Collection of samples glyphosate excretion by urine after four weeks supplementation with a combination of 200 g charcoal plus 500 mL sauerkraut juice/d or 120 g humic acid/d [10]. The present paper reports the results of a sequential study with different treatments, each lasting four weeks, on a 380 cow dairy farm over 26 weeks. The above mentioned treatment parameters (selected enzymes, electrolytes, and substrates in blood serum or whole blood as well microbiological parameters of feces) were investigated after each change of supplementation (each four week period) or four weeks after finishing all supplementations. To get information about the influence of the treatments on the fecal microbiota, ...

Glyphosate Patents

1. Chelating Agent. U.S. patent number 3160632 A, filed: January 30, 1961; awarded:
December 8, 1964.
Inventors: Toy Arthur Dock Fon, Eugene H Uhing;
Stauffer Chemical Co
Title: Aminomethylenephosphinic acids, salts thereof, and process for their production.
Glyphosate is a chelating agent, wetting agent, biologically active compound and chemical intermediate for the production of aminornethylenephosphonic acids and derivatives thereof.
Due to its strong metal chelating properties, glyphosate was initially used as a descaling agent to clean out calcium and other mineral deposits in pipes and boilers of residential and
commercial hot water systems. Descaling agents are effective metal binders, which grab on to Calcium, Magnesium and heavy metals to make the metal water soluble and easily removable. Later, Monsanto acquired the chemical and obtained a patent for its herbicidal properties. Once glyphosate is combined with a metal, it does not follow the normal degradation pathway and remains in the environment or biological systems for a long time. Glyphosate alone is a weak nephrotoxic substance. When it combines with arsenic or heavy metal, its nephrotoxic property is enhanced a thousand times.

2. Herbicide. U.S. patent number 3455675 A, filed: June 25, 1968; awarded: July 15, 1969.
Inventors: Riyad Rida Irani, Mondanto Co.
Title: Aminophosphonate herbicides ------- This invention relates to a novel procedure for inhibiting the growth of unwanted plants. The invention is particularly directed to the use of a class of compounds which have selective phytotoxicity on grasses and other noxious weeds. The procedure is particularly effective in destroying established weeds. It has been found that a class of compounds not previously known to posses phytotoxic properties are particularly useful as selective toxicants when applied to leaves, stems, roots and other parts of living plants.

3. Anti-microbial. U.S. patent number 20040077608 A1, filed: August 29, 2003; awarded: April 22, 2004.Inventors: William Abraham, Monsanto Technology Lic.
Title: Glyphosate formulations and their use for the inhibition of 5-enolpyruvylshikimate-3-phosphate synthase.
Protozoan parasites of the phylum Apicomplexa include some of the most important causative agents of human and animal diseases, in particular, malaria. The discovery that an organelle found inside parasites of this phylum probably stems from a plastid of plant origin has stimulated research on the effect of chemical herbicidal agents on Apicomplexa. Importantly, the growth of these parasites can be inhibited by the herbicide glyphosate, suggesting that the shikimate pathway will make a good target for the development of new anti-parasite agents. The present invention discloses the use of the herbicidal agent glyphosate in combination with the polyvalent anion oxalic acid for the prevention and therapy of these pathogenic infections.
---------Claim 1. A process of treating an animal subject for a pathogenic infection, Wherein the infection is by a pathogen containing the enzyme 5-enolpyruvoylshikimate-3-phosphate synthase, said enzyme being susceptible to inhibition of its enzymatic 20 activity by the herbicidal agent glyphosate, the process comprising administering to said animal subject a therapeutically or prophylactically effective amount of a glyphosate source and a dicarboxylic acid source.
----------Claim 2. The process of claim 1 Wherein the dicarboxylic acid is 25 oxalic acid or a salt thereof.
It includes use in animals and humans by injection, orally, anally, intravenously, intramuscular, subcutaneous etc.

U.S. Classification 514/114, 514/574
International and Cooperative Classification: A61K31/19, A61K31/66
European Classification A61K31/66, A61K31/19

4. Biocide. U.S. patent number 7771736 B2 filed: August 29, 2003; awarded: August 10, 2010.
Same as #3 with additional classifications (biocide class 424/405; international: A01N37/00):
U.S. Classification
424/405, 504/206, 514/563, 514/574
International Classification
A01N37/00, A61K31/19, A01N57/18, A01N57/02, A01N37/12,
A01N35/08,A61K31/66, A01N37/44, A01N25/00

Cooperative Classification A61K31/19, A61K31/66
European Classification A61K31/19, A61K31/66
Biocide: Any substance or mixture of substances intended for preventing, destroying, or mitigating any living organism (e.g., plant, animal). Examples of a biocide are: acaricide, arthropodicide, fungicide, insecticide, molluscicide, rodenticide.

> The Harmful Effects Of Glyphosate, The Most Common Agrochemical -------- Mark Hyman, MD ---- 1.38M subscribers ------ 465,584 views Jul 29, 2020 The Dr. Hyman Show ---------- We're living in an age where it's increasingly hard to avoid exposure to toxins. Some of the most ubiquitous are right on our food, on some of the most commonly eaten items in the American diet. It's no wonder that illnesses related to toxicity, like cancer, infertility, and neurological diseases, are on the rise. The most widely used pesticide in our food supply is glyphosate. It's used all over the world on more than 70 different food crops, including corn, soy, and wheat and is linked to some serious health risks, including non-Hodgkin lymphoma. It's terrifying to consider that a bowl of Cheerios has more glyphosate per serving than vitamins D and B12, both of which are added to try to boost nutritional value.
> ---------- We need to change our food system if we want to change our health, and it's issues like these that need our help. I was so happy to sit down with my good friend Robert F. Kennedy Jr. to dig into the topic of glyphosate and corruption in the agricultural industry. Bobby Kennedy serves as President of Waterkeeper Alliance, Chairman of the Board and Chief Legal Counsel for Children's Health Defense, and of counsel to Morgan & Morgan, a nationwide personal injury practice. He was previously Chief Prosecuting Attorney for the Hudson Riverkeeper, Senior Attorney for the Natural Resources Defense Council, and a Clinical Professor and Supervising Attorney at Pace University School of Law's Environmental Litigation Clinic. ---------- This episode is brought to you by Tushy and ButcherBox.

> Why does the EPA say glyphosate is â€œsafeâ€?? Regional, national, and international agencies have engendered much controversy over glyphosate's safety. The EPA states, â€œThere are no risks of concern to human health when glyphosate is used according to the label and that it is not a carcinogen.â€? However, the courts and the scientific community believe otherwise. A recent study by researchers at the University of Washington found that glyphosate raises the risk of non-Hodgkin's lymphoma to those exposed to the substance by 41 percent. Prior to that, the World Health Organization reclassified glyphosate as carcinogenic to humans.

Samsel / Seneff 2013 .. via:
http://www.truthwiki.org/history_of_celiac_disease/#section-4 ------ EXCERPT:
Contaminated Grain and the Rise of Celiac -------
In 2013, Anthony Samsel and Dr. Stephanie Seneff revealed a correlation between the increasing use of glyphosate in agriculture and the growth of celiac disease in the Western population. (Glyphosate is the active ingredient in Monsanto's Round Up, and it is used extensively in modern-day agriculture and landscaping.)

At present celiac disease is on the rise. Chemically treated wheat, GMO wheat spreading it's modified genes to wheat, leaky gut syndrome, and candida infections (candida albicans has a similar protein structure to gluten) all likely play a part in the increased prevalence of the disease. Celiac disease has always been with us, among the minority of the population but that may change in the future. (4)

Willem Karel Dicke oorlog ervaring met GRAAN
This lead Dr. Dicke to make the connection between proteins found in wheat and damage to the small intestine. He wrote his thesis on celiac disease and its connection to wheat and rye in 1950.

Celiac Disease
https://pdfs.semanticscholar.org/d450/1bf760406ddd65a62650e59d240647c6a925.pdf
Dr. Seneff's Findings. â€œCeliac disease is associated with imbalances in gut bacteria that can be fully explained by the known effects of glyphosate on gut bacteria.

A Fishy Attempt To Link Glyphosate And Celiac Disease
https://www.science20.com/agricultural_realism/a_fishy_attempt_to_link_glyphosate_and_celiac_disease-132928

In their analysis of the Indian fish study, Samsel and Seneff concluded that the effects observed on the fish digestive systems were "highly reminiscent of Celiac...

http://ultimateglutenfree.com/2014/02/does-glyphosate-cause-celiac-disease-actually-no/

The Fishy Study
Samsel and Seneff cite a publication by Indian scientists from 2009 (Senapati et al). In that study, ugly effects were observed in the digestive track of the fish that were exposed to water containing a glyphosate-based herbicide. Such a finding would be surprising, because for decades, glyphosate has been a preferred method of weed control in aquatic settings, specifically because it has unusually low toxicity to fish and other aquatic organisms.

Glyphosate is particularly valued by the people who are trying to control invasive weeds in wetlands, lakes etc. as described here for CA, WA and FL. They spray it on the part of the weed that is above the water because that is the only way it is effective, but obviously some glyphosate gets into the water. Still, this use has long been considered to be safe for fish. Did this paper document a previously unrecognized issue?

In their analysis of the Indian fish study, Samsel and Seneff concluded that the effects observed on the fish digestive systems were "highly reminiscent of Celiac disease." To me, the effects sounded much more reminiscent of surfactants. Fish are very sensitive to those.

When I read the Senapati article, it quickly became obvious that this was indeed the problem. These researchers specifically stated that they used a commercial formulation of glyphosate manufactured in India called Excel Mera-71. A quick web search shows that Mera-71 is a formulation made for terrestrial, not aquatic use. The manufacturer describes it as containing glyphosate and "a blend of non-ionic and cationic surfactants."

At least in the US, products registered for use on weeds growing in water do not contain surfactants because surfactants are well known to injure fish. There was no surfactant control, so the reviewers of the Senapati study should never have let them conclude that the effects were from exposure to glyphosate. It is much more likely that the fish were injured by the surfactants.

Fish Abuse---------NOOOO! Not another water change!

There were other experimental design problems with the Senapati study. They chose to put the fish into water containing 4mg/L of glyphosate.
To achieve that sort of concentration by spraying weeds in even shallow water would have required spraying the weeds above the water at many times the maximum rate allowed. (Here is an EPA label for a glyphosate product for use on weeds in water - AquaMaster).

Then, to make matters worse, the water in which the fish were being kept was replaced every other day for 45 days with a fresh solution of 4 mg/L glyphosate along with the inappropriate surfactants. That would not correspond to any imaginable use-scenario in the real world. So basically, Senapati et al abused several poor fish for more than six weeks to demonstrate what was already well known - surfactants hurt fish. The only thing remarkable about the study is that the fish even survived. Glyphosate is still a good option for the control of aquatic weeds. No, it does not cause Celiac.

Some Additional Thoughts About The Scientific Process
This study was a "literature-only" review which involved no actual experimentation. That can be ok. The literature is there to be the subject of scholarship. On her own web page Seneff explains that she places her work in the "open access journal," Entropy, because it is "willing to publish novel hypotheses," and because "the papers are subjected to rigorous review by experts who were not beholden to industry influence."

That can be ok too as the making of hypotheses is the starting point for the scientific method and unbiased reviews are important for science. However, if one is going to attempt to do science this way you can't assume that every paper you find actually shows what it claims to show, even if it's what you would like it to show. If these authors wish to review papers this far outside of their own discipline and training, they would do well to confer with people more familiar with these topics. I would be happy to recommend such resources for future publications.

In science, even when research is published in a "peer reviewed" journal, that does not finish the vetting process. Particularly if some new finding challenges previously accepted ideas, the next stage is critical. Does the work hold up to scrutiny by the broader scientific community? Can the results be repeated by others? The Senapati and Samsel /Seneff papers fail to pass these tests.

Researchers that are really trying to understand conditions like Celiac disease will continue to look at other, more likely causes. Unfortunately, in the extensive, anti-technology sector of the internet, this new "link" will likely live on and joint the list of other myths about food and agriculture.

You Are Not Gluten Intolerant- You're Glyphosate Intolerant?----- updated to: April 2, 2019
It wasn't that long ago that someone with Celiac disease would have a hard time ordering meals at restaurants or finding safe gluten alternatives for themselves at the grocery store. Now, gluten-free options seem to be the norm almost everywhere you go in North America.

I do read and write every day in three languages English, French, and Arabic. I read books, small and large, old and current, classical and common, biased and â€œbalancedâ€?.

I used to spend 3 hours per day reading and taking notes in the private library of Phares Zoghbi that contained 50,000 books, mostly in French and Arabic, until they closed it after his death.

amazing dream ... i usually take a pinch of Artemisia Annua no greater than fits between two fingers NOT pressed together, a tea that prevents kidney pain when i drink a small cup every 4 to 5 hours ... but this time i made it slightly stronger and i've learned to expect dream intensification from that. Not saying this will be so for everyone but sure as hell getting well for me.

Downing a shot just before my second sleep [from 7 to 10 often] after 4 hours of waking 'life', brought on a raging dream, sharp, rich and literally all over the place in every way i know myself to grapple with in waking life.

.... This one included wonder purgers, being made a tibetan on the chinese border by Xi Jing Ping himself which later plays a role in a raging polemic w George Webb plus a host of others, including children. City scenes, walks, rides ... and tons of intrigue, one of which was a barrel of paste which i stirred and ate from only to find out it wasn't food but one of GW's project on the go, and it turned out to be aluminium more than anything ...

Most of the time in this epic confrontation op search series i was pursuing him over this as he dodged and ducked or the times i caught up, havin to battle a coterie of true believers who feted him, was vague and evasive about.

This even came to blows but in the last scene there was some sort of a race goin on [chinese GP on the radio as 'break in' to the longest running program with nature enthusiasts but more and more stupid cuck -- don't mention warwhores in relation to prices, etc].

Now, i've argued in the past that his talents and those of former collaborators who also have grown quite skeptical for similar reasons, Mark Kulacz in particuliar, albeit over different substance [in that sense they still are very much a team visavi moi, tryin to explain to both that the covid heist 'auf- und abarbeitung' is good and well and all but NOT the most urgent thing in the way of preventing greatest harm].

Greatest harm 'prize' [humanUNkind's biocidal scourge for generations before and after the millenial click] fits, goes to and emanates from the account of glyphosateurz fair, not square but secure and on the nose imho#
These paralysis pimps choose to sell it as oderless / tasteless btw. Funny [not] how that works huh?

i am lucky to know, and tho serious uptake was way too slow, Stephanie Seneff who is on that exact wavelength .. but does not appear in my 'movie' scat zero g piet reeee' zeroin in on that zero tho, not this

episode anyway.

Agent Orange ---- Time to clean up the mess we've made.
Gregory Pettys ----- Mar 23, 2025
Honestly, I don't even know where to begin with this one. I almost opted to write another poem, for poems, I feel, do a far better job of guiding our hearts into the hidden wounds where appropriate grief resides, that sacred inner mud pool from whence holy metabolized re-membering can commence. But in the end I figured I should give another essay a go, with the intention being to more specifically speak to an aspect of our not-so-distant history that has risen again in recent days due to the wicked foul play of the monstrous Agent Orange now residing in the White House. ---------- Further Reading: Agent Orange in A Luoi Valley

https://indexterity.blogspot.com/2025/04/i-need-alt-for-my-archive-dot-org-keepie.html
last issue of the MATI stream had another heads up on the 'subvertee' status of archive.org
Here's a copy of more evidence i found about suspect rode and code blocks on vital issues [peeled out of source code with a 'blink' to repel the naive, .. it seems to say it like it is just a liddul too joltily]:

> Everything You Never Wanted to Know About Monsanto's Modus Operandi (M.O.)
> If You Think Monsanto's Roundup is a Safer Pesticide, Please read the articles and papers on this page !
> Because all herbicides are pesticides, Roundup is a pesticide as defined by the EPA.
> Monsanto bribes, cheats, lies, steals, kills, . . .
> -- If you're still not convinced that Roundup is a highly toxic and persistent pesticide, read on, while at the same time remembering the other contributions that Monsanto has made to society such as:
> ---- Saccharin, Astroturf, agent orange, dioxin, sulphuric acid, polychlorinated biphenyls (PCBs), plastics and synthetic fabrics, research on uranium for the Manhattan Project that led to the construction of nuclear bombs, styrene monomer, an endless line of pesticides and herbicides (Roundup), rBGH (recombinant bovine growth hormone that makes cows ill), genetically engineered crops (corn, potatoes, tomatoes, soy beans, cotton), and it's most significant product to date; Lies, Factual Distortions and Omissions. Here's one of the distortions that Monsanto had on its website a while back. "Sustainability - the idea that the resources and people of this world are finite. That for any business decision we make, we must consider the effect it will have on us and our children. That the products we make must not use up all of a natural resource, or even worse, contaminate what is left behind."

ps: plenny of earlier versions, blink starts in 2009

Antiviral (especially effective against the cytomegaly virus from the herpesfamily)
â€¢ Toxin binding (mucopolysaccharide membrane)
all known toxic metals, environmental toxins such as dioxin and others
â€¢ Repairs and activates the bodys detoxification functions:
â€¢ Dramatically increases reduced glutathion,
â€¢ Sporopollein is as effective as cholestyramin in binding neurotoxins andmore effective in binding toxic metals then any other natural substancefound.
â€¢ Various peptides restore coeruloplasmin and metallothioneine,
â€¢ Lipids (12.4 %) alpha-and gamma-linoleic acid help to balance the increased intake of fish oil during our detox program and are necessary for a multitude of functions, including formation of ther peroxisomes.
â€¢ Methyl-coblolamine is food for the nervous system, restores damaged neurons and has ist own detoxifying efect.
â€¢ Chlorella growth factor helps the body detoxify itself in a yet not understood profound way. It appears that over millions of years chlorella has developed specific detoxifying proteins and peptides for every existing toxic metal.
â€¢ The porphyrins in chlorophyl have their own strong metal binding effect.
Chlorophyll also activates the PPAR-receptor on the nucleus of the cell which is responsible for the transcription of Dna and coding the formation of the peroxisomes (see fish oil), opening of the cell wall (unknown mechanism) which is necessary for all detox procedures, normalizes insulin resistance and much more. Medical drugs that activate the PPAR receptor (such as pioglitazone) have been effective in the treatment of breast and prostate cancer.
â€¢ Super nutrient: 50-60% aminoacid content, ideal nutrient for vegetarians, methylcobolamin - the most easily absorbed and utilized form of B12, B6, minerals, chlorophyll, beta carotene etc.
â€¢ Immune system strengthening
â€¢ Restores bowel flora
â€¢ Digestive aid (bulking agent)
â€¢ Alkalinizing agent

#celiac etc = #glyphosate = #constipation = the better a moneyspinner spins money the more it being lied about by the exploiters == Stop the Lymphoma pipeline and all other PharMafiyac ops NOW, YESTERDAY or at least ASAP.

My dad used to say this a lot: 'praat glad van je gat' ... ironic i am now convinced that the bulk of modern ailment heirs and hosts do in fact stem from the the cause that cannot .. can !!! STILL !!! not .. can in the name of dirty money, holiest cow ever, NOT be named: glyphosate !!!
We have Celiac but not Glyphosate disease????
We have Lymphoma but not Glyph disease???
We have a turd that will not depart 'glad van het gat'???
Come on Morons, stop self damaging !!!!!!!!
apropo that conveyor belt between congestion / constipation, etcetera, all the way to terminal cancer candle blow out. it is the entry 'drugged' feefee .. the entry drag to full blown snowflakey sjw, mob4hire, kneejerk, gameroidal flame out trannyhood+ trooniness ['king's day in NL, 'scuse .. cough, retch] ... but i have the exit ease and easiest peazyest solution rite here 4u: push the sidewalls back in .. you don't even have to touch that turd. And remember, habits die hard and you lose remedial time focusin on and resenting the hell out of parties up and down the causative chain. Too many to mention or fight .. and you'll be in hospital after a single dose from, as in my case, chomping on a carefully watered doorstep dandelion, a mere few leaves, barely a mouthful but recently thanatop opped by a hostile moron deviltool 'neighbour' ..... if this tale strikes you as the stuff showtrials and dambreak verdicts are made of, i agree but i put the info out there years ago i and got ZERO enquiries from anybody, let alone ambitious lawfirms.
I resign my Mascotte until radical and unlikely turnaround i guess .....

ps: specially tragic is the fact peps hide true causes but ... victims do too!!! From the very early stages of cope increment lifestyle changes are a must and their requisition soon suffers a forced marriage 'in Stockholm'. In other words, peeps love the perks and protect that habits arranged around them. Who are you to call them bad, call for change and ask about the actually real factual fuel at source of projections, as deep inside as enemies were at the door once upon a time? Don't you know enemies are demoted from life blood to pretend? I just wanna haz my pharmafiyid coined pillname so i know what box to tick and get me my subsidized health plan on the derailz.

Een Vriendje Naar Haar Moeder's 'Hart'
3:30PM next day: the last 21 hours spent 'writing' it in my racing head, trying to keep up with my heart .. or trying to reason some calm and detachment into the whole affair before the latter gave out more likely, interestingly, not repetitive at all but full of overtones to preceding harrowage ... didn't sleep a whole lot

it began a day earlier when i see Selien all upset stalking center village, i circle around and ask 'liefdesverdriet' .. she walks away muttering something. Next day ['no'terday] i spot the 2 boys who have been paying about .... aroun 10 brief visits in the last .. few months .. part of the original crews a handful of years ago now .. which i had called an end to cause a posse had appeared and tried to toss a large potted plant into the rainbarrel but missed and broke it, crashing the ladder to the ground for good measure. At the start of this trajectory i had a crowd on the soccer field which cleared up any doubt about the 'piet is a pedo' meme virulence, altho brief sentences were spoken before 'parting of ways'
i must realize the brand sticks to me good and i cannot show up to, .. might possibly have to make a point of avoiding their haunt, wide birth or high speed should do it.

it's amazing how gossip cults grow, to become a member you pay tribute and add a phantaseeing of your own ..works fine from a distance .. but the sight of me works like red cloth on a bull or hardcore on an addict. My answers were disqualified and overruled with preferred version from a cannon that kept the kids lips flapping nonstop for nearly .. an hour it feels like ... it even came to some blows and i begged the 3 other kids, is girlfriend the daughter of that death threat issuing woman on the sidewalk across my house, on her birthday, also 5ya. I was robbed, held up, slandered to my face, threatened with a litany of terminal suffering.
That woman in question moved away and has a new partner who happened to be pointed out to as he cruised during the opening scene.
I had had to explain why i had [roadside / berm score] condoms in the little box tied to the bike carrier .. but the kid called it 'achterbak' and i told them i had a mattress in it ... Now, with hindsight i realize their mind immediately went 'rape paraphernala' .. not to wondering and sampling a panoply of cultures and mores ... perhaps me wondering if i should try to explain my preferences for and living solo, oppertunity to let my balls out in the free ambient air on the 'wrong' side of the zipper instead of that stuffy restrictive other on, incenced them also. But i was well on my way to serious physical discomfort, dry throat .. and utter inner turmoil being aghast at the zealotry on display, combined with the cockfite and ousting goin on .. the surely still alive but badly suffocated sympathy towards me must be counterbalanced and neutralized with something and only seeing the perfect opposite reflected in near and dear ones when the need arises or emergensees resurgencease like yesterday arise, will do.

ddg AI:

Celiac disease and glyphosate exposure are distinct topics, and the naming of diseases typically reflects their underlying causes and mechanisms rather than external factors like agricultural practices or chemical exposure. Here are some key points explaining why celiac disease is not referred to as "glyphosate disease":

Celiac Disease Definition: Celiac disease is an autoimmune disorder triggered by the ingestion of gluten, a protein found in wheat, barley, and rye. It leads to inflammation and damage in the small intestine when gluten is consumed by individuals with a genetic predisposition.

Mechanism of Celiac Disease: The disease is primarily related to genetic factors and the immune system's response to gluten. It is not caused by glyphosate or any other chemical. The diagnosis and understanding of celiac disease are based on its specific immunological and genetic characteristics.

Glyphosate's Role: Glyphosate is a widely used herbicide, primarily known for its application in agriculture, particularly in glyphosate-resistant crops. While there has been some debate about the potential health effects of glyphosate exposure, including concerns about its role in various diseases, there is currently no scientific consensus linking glyphosate directly to the development of celiac disease.

Research and Evidence: The research on glyphosate primarily focuses on its potential carcinogenic effects and other health impacts, but it does not establish a direct causal relationship with celiac disease. Celiac disease has been extensively studied, and its causes are well understood in terms of genetics and immune response.

Naming Conventions: Diseases are typically named based on their primary characteristics, causes, or the individuals who discovered them. Celiac disease is named after the Greek word "koiliakos," meaning "abdominal," reflecting its gastrointestinal symptoms. The term "glyphosate disease" would imply that glyphosate is a primary cause of a specific disease, which is not supported by current scientific evidence.

In summary, celiac disease is not known as "glyphosate disease" because it is an autoimmune disorder primarily triggered by gluten, and there is no established link between glyphosate exposure and the development of celiac disease.

why do you disqualify the work of stephanie seneff

Stephanie Seneff is a researcher and senior research scientist at the MIT Computer Science and Artificial Intelligence Laboratory, known for her controversial views on various health topics, particularly regarding glyphosate, the active ingredient in many herbicides, and its alleged links to various health issues, including autism and celiac disease.

Critics of Seneff's work often point to several factors:
Lack of Robust Evidence: Many of her claims, particularly those linking glyphosate to serious health conditions, are not widely supported by the broader scientific community. Critics argue that her conclusions often lack rigorous empirical evidence and do not align with the consensus of scientific research.

Methodological Concerns: Some researchers have raised concerns about the methodologies used in her studies, suggesting that they may not adhere to standard scientific practices. This includes issues related to data interpretation and the drawing of causal conclusions from correlational data.

Peer Review and Acceptance: While Seneff has published her work in various journals, some of her more controversial claims have appeared in less reputable journals or have not undergone rigorous peer review. This can lead to skepticism about the validity of her findings.

Scientific Consensus: The majority of scientific studies and reviews conducted by organizations such as the World Health Organization (WHO) and the European Food Safety Authority (EFSA) have found glyphosate to be safe when used as directed, which contrasts with Seneff's assertions about its dangers.

Focus on Alternative Theories: Seneff's work often emphasizes alternative theories that diverge from established scientific understanding, which can lead to criticism from mainstream scientists who advocate

for evidence-based approaches.

It's important to note that while Seneff's work has garnered attention and support from certain groups, it remains controversial and is often met with skepticism from the broader scientific community. As with any scientific discourse, it's essential to evaluate claims critically, considering the quality of evidence and the consensus among experts in the field.

you seem unaware or unwilling to admit "consensus among experts in the field" is more often than not the result of bribes by the industries involved. The more filthy lucre riding on lies, the more boldfaced and pretentious they are. Stop shilling for big money.

please list the archives containing medical records used in the process of discovery for class action suits against Monsanto.

last try. give me a list of these trials over the years.

Here is a list of notable class action lawsuits and legal cases involving Monsanto, particularly related to glyphosate and its alleged health effects:

Monsanto v. Geertson Seed Farms (2007): This case involved the legal challenge against the deregulation of genetically modified alfalfa. The court ruled in favor of the plaintiffs, leading to a temporary halt on the planting of genetically engineered alfalfa.

In re: Roundup Products Liability Litigation (2016): This is a significant multi-district litigation (MDL) that consolidated numerous lawsuits against Monsanto alleging that glyphosate, the active ingredient in Roundup, causes non-Hodgkin lymphoma. The MDL has seen several trials and verdicts.

Johnson v. Monsanto (2018): This was one of the first high-profile trials in the MDL, where Dewayne "Lee" Johnson, a groundskeeper, claimed that his cancer was caused by glyphosate exposure. The jury awarded him $289 million in damages, which was later reduced to $78 million.

Hardeman v. Monsanto (2019): Edwin Hardeman sued Monsanto, claiming that his non-Hodgkin lymphoma was caused by glyphosate exposure. The jury found in favor of Hardeman, awarding him $80 million in damages.

Pilliod v. Monsanto (2019): Alva and Alberta Pilliod were awarded $2 billion in damages after the jury found that their non-Hodgkin lymphoma was caused by glyphosate exposure. This verdict was later reduced on appeal.

Bayer AG Acquires Monsanto (2018): Following Bayer's acquisition of Monsanto, the company faced numerous lawsuits related to glyphosate. Bayer has since sought to settle many of these claims.

Settlement Announcements (2020-2021): Bayer announced a $10.9 billion settlement to resolve approximately 125,000 claims related to glyphosate and non-Hodgkin lymphoma. This settlement aimed to address the ongoing litigation and provide compensation to affected individuals.

Ongoing Litigation: As of 2025, there are still ongoing lawsuits and claims related to glyphosate, with some cases continuing to be filed in various jurisdictions.

These cases highlight the legal challenges Monsanto (now part of Bayer) has faced regarding glyphosate and its alleged health effects. The outcomes of these trials have had significant implications for the company and its products.

677th .. Draft 1 and Present version
I HAD A DOSE WHICH COVERED 2 DOORSTEP DANDELION LEAVES IN 2020 .. it and the [after]shock revelations of all the kneejerk w malignity sauce maliciousness i had not sensed before subjecting myself [ignoring quiet, back of the head 'naggies' .. warning intutorial alarm bells goin crazy against my stupidly suicidal 'objection': 'if people really are THAT depraved of decency {do NOT dangle or splash n splay alibis in front of your haters, specially not the ones you were to lame to prevent becoming your neighbours 'in the first place'} i'm all out of desire to keep dousing my dutchness with delusions of duuuh vast improvements impending].

... LYMPHOMA CHEMO LATE SUMMER 2021
since then, artemisia tea, fulvine [distilled from groundwater, an ag variety 60x cheaper] and zeolite plus ClO2 occasionally [to clear very old jaw probs that play up now and then].
My innards are 85, i am 76 .. anything over a dinner size that fits a coffee cup puts me to sleep .. and robs me of the energy i can manage to eek out of 1 cup ....

My clean green, unmeterably cheap inventions will have to wait for a next life when chemicals [and alphabets] are earmarked and treated as the hazardous waste they are. i am not letting the type of bioleninist woke nor toxy macho cultures have them to commit their crimes more easily.

We'll have to have a few generations of sterilization and/or strick hermetic quarantines to get some permie habits installed and instilled to heal and make life of lives much fairer deals.
https://archive.org/details/surviving-glyphosate-2023-73p

PRESENT VERSION

I HAD A well watered DOORSTEP DANDELION IN 2020 ..
It received a glyphosate dose from a squeeze bottle aimed at it, unrequested, unannounced, in 'neighbourly hands.
I ingested the portion that fits the 3 leaves i chewed away as anticipated during the hot week of watering.

Its instant paralysis affects not just plants but psyches of 'higher' organism, take it from me.

Equally stunning -literally- {after}shock revelation ...
{from flash visions of all the kneejerk greed wiiide open for an array of malignity sauce -as in my case- 'necessary' to make this kind of thing possible}
..... made sure of that.
The reality of evil in such manifest magnitudes as i had learnt about, as, indeed, i had focused on for decades but never as deeply sensed before and suffered from until subjecting myself [do not try this at home peepsies, ... try to get the most out of warnings instead, but steer clear of the fearporn shoals, rife in the daze day of macho tox hun'in#1] had come to stay
#1 = Do not ignore quiet, back of the head 'naggies' .. intuitorial alarm bells goin crazy against my stupidly suicidal 'objection':
'if people really are THAT deprived of decency....
{hope i don't ever again dangle or splash n splay alibis in front of role reversal haters, specially not the ones you were too lame to prevent becoming your neighbours 'in the first place'}
..... i'm all out of desire to keep dousing my dutchness with delusions of duuuh vast improvements impending'.

... LYMPHOMA & CHEMO LATE SUMMER 2021

2022 and since: artemisia tea [every 5, 6 hours], fulvine drops [5x10 daily - distilled from groundwater, an ag variety 60x cheaper than via bioleninist trappins] and zeolite .. plus ClO2 occasionally [to blow thru very old jaw probs that play up now and then, which it does as easily as lots n lots of other probs].

My innards are 85, i am 76
Stephanie Seneff points the way to cures .... adapt cyanobacteria to the human system for instance ... easier than stopping greedy but otherwise mindless devil baby face orcs.

.. anything over a dinner size that fits a coffee cup / tea mug / 400 grams tops puts me to sleep .. and robs me of the energy i can manage to eek out of that little.

Post exertion recoverytime is excessive and so i abstain from actual 'expressions of vigor', making do with fond memories.
i weigh about 63 kilo at 6foot3 .. still not much less than 5 years ago.

My clean green, unmeterably cheap inventions will have to wait for a next life when chemicals [and alphabets] are earmarked and treated as the hazardous waste they all too easily become. The varieties that MUST be rooted out lock stock, barrel and vat... then MUST be abstained from so the prob of theft cannot even arise.
..... i am not letting the type of bioleninist woke nor toxy macho cultures as tussle and vy for power today have them to commit their crimes more easily.

We'll have to have a few generations of sterilization and/or strick hermetic quarantines to get some permie habits installed and instilled, to heal and make life of lives much fairer deals. This is [yet another] round i lost [another one me and my sibling semi jesus types too often lose .. at astounding rates if you know what to look for]

Here's part of the story:
https://archive.org/details/surviving-glyphosate-2023-73p

PS: Dietrich Klinghardt will be in Germany this month ... please intercede and make him see me ... i tried and failed too many times to try again ..... i should just check in at their ink.ag clinic huh? .... oh .. and as far as pharmafiya in Holland goes ... the kanker.nl mods threw me off their forum ... 'fraaie boel' ..

THE GLOBAL THREAT FROM HIGHLY HAZARDOUS PESTICIDES

IPEN'S CONTRIBUTION TO THE MOVEMENT TO ELIMINATE HHPs AND PROMOTE SAFER FOOD AND FARMING

February 2024 --- page 16: Glyphosate is an organophosphorus pesticide that was developed and patented by the agrochemical company Monsanto (now Bayer) in 1974.

It is an herbicide, a chemical used to kill plants that are considered weeds. One of the most well-known herbicide formulations containing glyphosate as its active ingredient is Monsanto's RoundupÂ®. In 1996, so-called Roundup Ready soybeans were introduced as one of the first crops genetically modified to be resistant to glyphosate. Soon, other Roundup Ready crops were introduced, including corn, canola, and sugar beets.

Roundup will typically kill any plants, including crops, but GMO crops can survive spraying of Roundup. This allows farmers to use glyphosate repeatedly during the growing season without harming their crops, which has led to a massive increase in the amount of glyphosate used and increased contamination of crops sprayed with glyphosate (Jarrell et al., 2020).

When the patent for glyphosate expired, many companies started producing generic glyphosate-based products, making it the most used herbicide globally. In 2014, sales of glyphosate products were estimated to be between 850,000 - 900,000 tonnes, constituting more than 90% of all herbicides sold to the agricultural sector globally (Antier et al., 2020).

Herbicides containing glyphosate are currently used in 140 countries and glyphosate has been found to widely contaminate soil, water, air, and food
(MuÃ±oz et al., 2021).

A wide range of health impacts caused by exposure to glyphosate havebeen reported, including respiratory diseases, neurological effects, and chronic kidney disease (Agostini et al., 2020). In addition, many studies
have shown a link between glyphosate and cancer, primarily non-Hodgkin lymphoma (Weisenburger, 2021). In 2015, the International Agency for Research on Cancer (IARC) concluded that glyphosate was probably carcinogenic to humans (group 2A). Glyphosate is an endocrine disrupting chemical that can impact female and male reproductive health (Gore et al., 2024).

Health impacts caused by Roundup have led to a staggering number of legal actions against Monsanto/Bayer. In California, Monsanto was found liable in three cases where plaintiffs had developed non-Hodgin lymphoma, with damages calculated at more than US$130 million. In June 2020, Bayer announced that it would settle about 125,000 Roundup product liability claims through a total payment of $10.1 billion. However, even that amount will not cover all the legal cases against Monsanto/Bayer related to Roundup (Centner, 2020).

Despite delays caused by strong industry efforts to create doubt about the toxicity of glyphosate, it is now banned in some countries, including Vietnam and in Mexico is being phased out in 2024 based on a Presidential Decree.

> Monsanto owner Bayer AG said it removed glyphosate-based herbicides from the U.S. consumer market in 2023 due to litigation. More than 100,000 people are suing Bayer alleging they developed non-Hodgkin lymphoma from exposure to the company's glyphosate herbicides, such as Roundup. We are posting documents released via discovery on our Monsanto Papers page. https://usrtk.org/monsanto-papers/

== Carey's blog ... she ended it end21 or someone 'helped' her do so with either a credible threat or substantial bribe .. she's doin some women's 'kwaaltje' if i recall correctly ..... sigh ..... that or she switched to Bayer and dropped MonSatan ...

> Glyphosate will still be used in large quantities in agriculture in the U.S. Reformulated versions of Roundup brand herbicide without glyphosate also remain on the market, but may contain other chemicals of concern.
>
> For example, one of the active ingredients in â€œRoundup for Lawnsâ€? is dicamba, a chemical that can damage non-target plants and crops. A 2024 study by Friends of the Earth reports that new formulations of Roundup may be up to 45 times more toxic than glyphosate-based formulas.

Rhamnaceae -- Taxonomy
Family Name: Rhamnaceae [A.L. Jussieu] Synonym(s): Frangulaceae DC.; Phylicaceae [J. Agardh]; Ziziphaceae [Adans. ex Post & Kuntze]

Common Name(s): amaranth family
*Number of genera/species: 55/950
Disseminule, fruit segment (usually endocarp exposed), ... schizocarp splitting into 3 endocarpids sometimes explosively so, drupe, or capsule (sometimes explosively dehiscent), rarely a samara. Fruits 1.5â€“30 mm long (cultivated Ziziphus drupes to 50 mm long, and Ventilago or Smythea samaras to 70 mm long including wings), globose to butterfly-shaped, often tri-lobed, terete to compressed in transection, with 1â€“4 seeds, often calyx and style persistent, sometimes with torus visible at base of fruits. Samaras winged, terminal or hemispherical, and schizocarps, sometimes longitudinally winged. Samaras and endocarpids or hemimericarps usually with one seed. Drupes with 1â€“4 pyrenes, each usually with one seed. Capsules few seeded. Pericarp gray, black, purple, greenish, brown, yellow, or orange (drupes also blue or white), shiny or dull, dry samara) schizocarps, capsules) or fleshy (drupes), glabrous or pubescent, usually smooth. Samaras striate or veiny. Drupes sometimes 2â€“4 furrowed or wrinkled. Ceanothus capsule surface variable, smooth or lobed, wrinkled, crested, or with horns. Endocarp thin or thick, usually woody or bony, sometimes cartilaginous. In schizocarps, endocarp may be brightly colored compared to exocarp and mesocarp.

Seeds often compressed or flattened, globose to angular, triangular in transection, 1â€“12 mm long. Arils present or absent, if present, fleshy, lobed or fimbriate, translucent, yellow, brown or black, varying in size from inconspicuous to enclosing the seed. Seed coat gray, black, purple, brown, yellow orange, red, or cream, dull or shiny, crustaceous, bony, or leathery, smooth or furrowed, pitted, wrinkled, or colliculose.

Embryo well developed, parallel to seed length, nearly filling seed cavity, foliate, straight, rarely bent, usually green, with investing or spatulate cotyledons.

Endosperm moderate to absent, usually smooth, ruminate in Reynosia.

Weed information
Rhamnus cathartica is considered a noxious weed in Montana.

Identification features
Fruit
Type: drupe, capsule, schizocarp, rarely samara
Size range: 1.5â€“70 mm long
Shape(s): globose, urceolate, trilobed, ellipsoid, fusiform, ovoid, obovoid, cylindric, oblong, triquetrous, angular, butterfly-shaped
Texture: dry (leathery or papery), fleshy (pulpy, corky or spongy)
Surface relief smooth, striate, veiny, 2â€“4 furrowed, wrinkled, crested, with horns or bulges
Color(s): gray, black, blue, purple, greenish, brown, yellow, orange, white
Unique features: Dry schizocarp or capsules, rarely a winged or not samara. Or fleshy drupes with 1â€“4 indehiscent, rarely dehiscent pyrenes.

Seed
Size range: 1â€“12 mm long
Shape(s): globose or orbicular, plano-convex, ellipsoid, ovoid, obovoid, oblong, reniform to heart-shaped, angular
Surface relief smooth, furrowed, pitted, wrinkled, colliculose
Color(s): gray, black, purple, brown, yellow orange, red, cream
Unique features: Seeds often with a dorsal furrow, arillate or not, with large green, embryo and usually scanty to no endosperm.

Other
Embryo well developed, parallel to seed length, nearly filling seed cavity, foliate, straight, rarely bent, usually green, with investing or spatulate cotyledons
Nutritive tissue: endosperm moderate to absent, usually smooth, ruminate in Reynosia

EMEA
Frangula bark belongs to the stimulant laxatives. Emodin-9-anthrone is the most important metabolite, which is produced by the bacteria of the large intestine. The mode of action is based on two mechanisms. Firstly, colonic motility is increased leading to a reduced transit time. Secondly, an influence on secretion processes by two concomitant mechanisms, namely inhibition of absorption of water and electrolytes (Na + , Cl -) into the colonic epithelial cells (antiabsorptive effect) and increase of the leakiness of the tight junctions and stimulation of secretion of water and electrolytes into the lumen of the colon (secretagogue effect), results in enhanced concentrations of fluid and electrolytes in the lumen of the colon. These findings are based on investigations with different anthrones deriving also from other anthranoid-containing herbal substances, but the results of these investigations are not always consistent

Results of investigations of Capasso F et al. 1983 (55) in rat isolated colon suggest that the laxative properties

of aloin and 1,8-dihydroxyanthraquinone may depend, at least in part, on increased prostaglandin synthesis by the intestinal tissue. Frangula bark predominantly contains the anthranoids as anthraquinones. Therefore it is supposed that the influence of frangula bark on fluid absorption and on secretion processes is lower than the influence of other anthranoid-containing herbal substances. Data of a direct clinical comparison of the effects are missing (8).

Cressari A et al. 1966 (11) investigated different constituents of the frangula bark to evaluate the laxative effect in comparison to a standard senna leaves extract (amount of anthranoids not mentioned) in mice. Glucofrangulin and frangulin only showed a laxative effect after oral administration. This effect was nearly 4 to 5 times stronger than the effect of the senna extract. The effect of emodin was comparable with the effect of the senna extract. Physcion and chrysophanol had no noteworthy effect. The administration of a methanolic extract of frangula bark (17.5 % anthranoid glycosides calculated as 1,8-dihydroxyanthraquinon-glycoside) in mice resulted in a dose dependent decrease of the intestinal transit time. After oral administration of 50 mg/kg body weight defaecation after 4 h took place in 20 % of the mice, after oral administration of 100 mg/kg body weight in 40 %. The ED 50 was mentioned with 121.5 mg/kg body weight (12, 13). A methanolic extract of frangula bark (23 % glucofrangulin, 2 % frangulin, 0.5 % aglyka) had a laxative effect in mice with a weight of 20 g after oral administration. The ED 50 was 3.66 mg/20 g body weight. The ED 50 of another frangula extract with 25 % glucofrangulin, 1.5 % frangulin and 0.5 % aglyka was 2.45 mg; the ED 50 of pure glucofrangulin A was 7.97 mg, of pure frangulin A 2.37 mg and of pure emodin 4.67 mg /20 g body weight (7). The administration of an aqueous suspension of 0.6 g pulverised bark (12 mg anthranoids (glucofrangulin and frangulin) had a laxative effect in humans after 6 to 24 h (12, 14)

[Summary: This page introduces Nighantus as texts compiling plant data, with Dhanvantari Nighantu being the first. It details Rajanighantu's classification of plant nomenclature based on Rudhita, Svabhavata, Deshokti,

etc. It aims to understand the scientific basis of Rudhita synonyms.]

[Find the meaning and references behind the names: Story, Shri, India, Shree, Ram, Bird, Wood, Time, Hinduism, Horn, Kashmir, Shiva, Place, Given, Crow, Still, Tree]

ISSN NO. 2581-785 X IRJAY IS OFFICIAL JOURNAL OF BALA G PUBLICATION P a g e | 144 Review Article
INTRODUCTION

ABSTRACT: - Ayurveda is the science of life in which all the details related to health and illness are explained in three categories viz. Hetu - causative factors, Linga - signs and symptoms and Aushadha - medicine. Further, Aushadha is explained in detail as treatment or procedure. Plants are one of the major constituents of the treatment part. In various Ayurvedic Samhitas , plants were described in brief until specific Granthas or texts were written focusing the plants. The texts in which the data about plants is compiled and recorded are classified as Nighantu . In Nighantu the information about plants is divided into two parts, synonyms and properties. Synonyms are considered as the guide for the identification of the plant in particular. This article aims to unravel the mysterious yet scientific information held by the synonym of certain plants.

Some plants have synonyms based on Rudhi (Tradition) or Tale.

FOUR EXAMPLES
To understand the Rudhita synonyms in detail, four plants viz. Shami , Agasti, Bilva and Kutaja are selected and reviewed for their literary meaning and properties. It is observed that the synonyms of these plants like Agnigarbha for Prosopis cineraria (Shami), Agasti for Sesbania grandiflora (Hadga), Bilva , Shreephala for Aegle marmelos (Bael) and Indravruksha for Holarrhena antidysenterica (Kutaja) hold specific properties and different scientific information than mere names.
Nighantus ..... are the texts in which the data related to plants is compiled. Dhanvantari Nighantu is considered as the first dedicated compilation of plants. This Nighantu is written in â€˜synonyms followed by properties' format. The similar pattern is followed by Nighantus written thereafter. In Rajanighantu the basis of nomenclature of plants or drug material is described distinctively for the first time, which is as follows

[1] â€“ â€œ Namani Kvachid Iha Rudhitah Swabhawat Deshoktya Kwachan chaLanchhano pamabhyam Veeryen Kwachiditara vhayadi deshat Dravyanam Dhruvamiti Saptadhoditani ||â€? Rajanighantu, Chapter 1 verse 13.
-----Rudhita â€“ Name given by natives on the basis of some tale like Agasti for Sasbania grandiflora , Shreephala for Aegle marmelos (Bilva), Agnigarbha for Prosopis cineraria (Shami), Indravruksha for Holarrhena antidysenterica (Kutaja).
Svabhavata â€“ Name given on the basis of nature of action of the plant like Chhardana (Emetic) for Catunaregam spinosa (Madanaphala for its emesis inducing nature).
Deshokti â€“ Name denoted by its habitat or by the name of the place where it is found like Kashmiraja (borne in Kashmir) for saffron.
Lanchhana â€“ Name based on specific morphological character like Chitratandula (Colorful design on seeds) for Embelia ribes (Vidanga).
Upama â€“ Name denoted by noting the similarity to some popular substance like Meshashrungi which means the plant which resembles to the horns of Mesha (The Ram).
Veerya â€“ Name based on potency or specific property of the plant like Agni for Plumbago zeylanica (Chitraka).
Itaravhaya â€“ Names related to some bird, animal or characteristic like Kakavhaya for Solanum nigrum (Kakamachi - Named after Crow), Hayavhaya for Withania somnifera (Ashvagandha â€“ Named after Horse).

> Connecting the Dots: Glyphosate and the Web of Life with Dr. Stephanie Seneff
> Farmer's Footprint --- 5.39K subscribers -- 34 views Nov 11, 2025 The Invisible Ingredient - The Chemical Within: Glyphosate and Us with Zach Bush MD
> In this episode, researcher Dr. Stephanie Seneff unpacks how glyphosate affects our health and the

delicate balance of life in and around us. She connects its widespread use to gut disruption, chronic illness, and the breakdown of biological systems we all depend on. Dr. Seneff makes a powerful case for rethinking the chemicals woven through our food system and moving toward organic and regenerative ways of growing that protect both people and the planet.

Social Handles:
X handle: @stephanieseneff
LinkedIn: linkedin.com/in/stephanie-seneff-9a04958
Website: stephanieseneff.net

Bio: Dr Stephanie Seneff is a senior research scientist at MIT and the author of Toxic Legacy: How the Weedkiller Glyphosate is Destroying Our Health and the Environment, named one of Kirkus Reviews' Best Non-Fiction Books of 2021. With a Ph.D. in electrical engineering and computer science, Stephanie brings a systems-thinking approach to complex biological questions - exploring how environmental exposures and nutritional deficiencies contribute to disease.

Her research focuses on glyphosate's disruptive role in human physiology, with cross-disciplinary insight drawn from biochemistry, epidemiology, and nutrition. Stephanie has a rare ability to trace the unseen - to follow subtle biochemical pathways and reveal how the health of our bodies is intimately linked to the health of our environment. Her voice in this conversation is both rigorous and visionary, inviting us to imagine what becomes possible when we move in step with nature, rather than in defiance of it.

> To evaluate our findings in a broader context, we note that over the past half-century, the incidence of childhood cancers has increased by 35% [81] and epidemiological evidence and mechanistic studies suggest that maternal exposure to pesticides is associated with an increased risk of childhood leukemia [70, 82], as previously suggested also by a working group organized by the European Food Safety Authority [83]. Recent epidemiologic studies have expanded the knowledge of the human carcinogenicity of glyphosate and GBHs. A recent meta-analysis reports that GBHs are associated with a 41% increased relative risk of non-Hodgkin lymphoma among highly exposed individuals [84]. Skidmore et al. [85] showed a significant temporal and geographical relationship between expansion of glyphosate tolerant genetically modified soy cultivation in the Brazilian Amazon and Cerrado regions and deaths from acute lymphoblastic leukemia in children, one of the most common pediatric blood cancers. Hardell et al. [86] published the results of a pooled analysis of three Swedish caseâ€“control studies including 1425 cases and 2157 controls, examining exposures to phenoxyacetic acids and glyphosate in relation to non-Hodgkin lymphoma and has shown an association between non-Hodgkin lymphoma and exposure to these herbicides.

results achieved studying labrats their entire lifespan .. and not, as is labcreep habit, dumping them at maturity, this one lasted 104 weeks

Figure 1 Bacterial and Fungal diversity is altered in the gut microbiome of rat exposed to either glyphosate or its herbicide formulations Roundup Bioflow and RangerPro.

Abstract
The potential health consequences of glyphosate-induced gut microbiome alterations have become a matter of intense debate. As part of a multifaceted study investigating toxicity, carcinogenicity and multigenerational effects of glyphosate and its commercial herbicide formulations, we assessed changes in bacterial and fungal populations in the caecum microbiota of rats exposed prenatally until adulthood (13â€‰weeks after weaning) to three doses of glyphosate (0.5, 5, 50â€‰mg/kg body weight/day), or to the formulated herbicide products Roundup Bioflow and RangerPro at the same glyphosate-equivalent doses. Caecum bacterial microbiota were evaluated by 16S rRNA sequencing whilst the fungal population was determined by ITS2 amplicon sequencing. Results showed that both fungal and bacterial diversity were affected by the Roundup formulations in a dose-dependent manner, whilst glyphosate alone significantly altered only bacterial diversity. At taxa level, a reduction in Bacteroidota abundance, marked by alterations in the levels of Alloprevotella, Prevotella and Prevotellaceae UCG-003, was concomitant to increased levels of Firmicutes (e.g., Romboutsia, Dubosiella, Eubacterium brachy group or Christensenellaceae) and Actinobacteria (e.g., Enterorhabdus, Adlercreutzia, or Asaccharobacter). Treponema and Mycoplasma also had their levels reduced by the pesticide treatments. Analysis of fungal composition indicated that the abundance of the rat gut commensal Ascomycota Kazachstania was reduced while the abundance of Gibberella, Penicillium, Claviceps, Cornuvesica, Candida, Trichoderma and Sarocladium were increased by exposure to the Roundup formulations, but not to glyphosate. Altogether, our data suggest that glyphosate and its Roundup RangerPro and Bioflow caused profound changes in caecum microbiome composition by affecting the fitness of major commensals, which in turn reduced competition and allowed opportunistic fungi to grow in the gut, in particular in animals exposed to the herbicide formulations. This further indicates that changes in gut microbiome composition might influence the long-term toxicity, carcinogenicity and multigenerational effects of glyphosate-based herbicides.
---------- Keywords: microbiota (16S), mycobiome, glyphosate, toxicity, pesticides
----------Introduction: Glyphosate is a broad-spectrum herbicide active ingredient and the most used pesticide worldwide. Glyphosate-based herbicides are used to control weeds in agricultural fields and urban environments, but also to desiccate crops shortly before harvest. The use of glyphosate-based herbicides such as Roundup has increased exponentially since their introduction at the end of the 1970s due to the wide-scale adoption of glyphosate tolerant genetically modified crops, especially in North and South America (Benbrook, 2016). It is estimated that about 700,000 tons of glyphosate are used worldwide annually (Maggi et al., 2019). Although the use of glyphosate is expected to further increase by 2025 (Maggi et al., 2019), its application is reaching a plateau in some countries due to the spread of glyphosate-resistant weed species (Heap, 2014). In addition, controversies surrounding the toxicity of glyphosate has led to bans or restrictions of glyphosate usage (Robinson et al., 2020).

Highlights:

1. Analysis of alterations in fungal composition at the genus level (Supplementary Table 2) indicated that the abundance of Kazachstania (Ascomycota) was reduced while the abundance of Gibberella, Penicillium, Claviceps, Cornuvesica, Candida, Trichoderma and Sarocladium were increased by the treatments with the two Roundup formulated products (Figure 4). Glyphosate had limited effects on the mycobiome. Overall, these observations further suggest that exposure to glyphosate and its formulations affects the abundance of major bacteria taxa, which in turn reduces competition and allows opportunistic fungi to grow in the gut of the exposed animals.

2. Starting treatment at a prenatal stage of development appears to be not only more representative of real-world exposure scenarios but is apparently able to reveal effects of glyphosate and Roundup formulations that are not detected when treatment is initiated in adult animals, which have more mature and stable gut microbial communities. The adult gut microbiome is relatively stable and resilient to environmental perturbations (Lozupone et al., 2012). In contrast, the developing gut microbiome in infants appears to be more sensitive to perturbations, which could durably impact health during adult life (Robertson et al., 2019).

3. However, the changes caused by glyphosate and the two formulated products are comparable but more

severe with the formulations, suggesting that the surfactants may enhance the effects of glyphosate as they do in plants in order for glyphosate to act as an efficient weedkiller. Numerous studies have shown that POEA surfactants contribute to the toxicity of glyphosate weedkillers.

Conclusion:
In conclusion, we reveal that early life exposures starting prenatally to glyphosate or its formulated products Roundup Bioflow and RangerPro cause large changes in the composition of the rat gut microbiota. This indicates that alterations in gut microbiome composition will have to be taken into account in the next phases of the Global Glyphosate Study addressing long-term toxicity, carcinogenicity and multi-generational effects of glyphosate and glyphosate -based herbicide formulations.

Glyphosate Damage - Pesticide Experts Shocking Review

In a â€œstate of the scienceâ€? review released Tuesday, PAN International presents a large body of research documenting the adverse human health and environmental impacts of glyphosate and glyphosate-based herbicides and underscores the need for a global phase-out.

Environmental and health advocates say the monograph on the world's most widely used herbicide, commonly known by its original trade name Roundup, should serve as a wake up call for regulators, governments and users around the world.

Adverse human impacts detailed in the review include acute poisoning, kidney and liver damage, imbalances in the intestinal microbiome and intestinal functioning, cancer, genotoxicity, endocrine disruption, reproductive and developmental reduction, neurological damage, and immune system dysfunction.

Aggressive public relations and marketing by glyphosate's developer, Monsanto, has resulted in the widespread perception that the chemical is â€˜safe'. Registration processes continue to allow its use without raising concerns about its safety even as new data identifying adverse effects emerge.

This review dispels this myth of â€˜safety' and highlights the urgent need to re-examine the authorization of products containing glyphosate. A full chemical profile is presented, along with the regulatory status of products containing glyphosate in many countries and information on viable alternatives.

Glyphosate is included in PAN International's â€œList of Highly Hazardous Pesticidesâ€? targeted for global phaseout. The global network is calling for the herbicide to be replaced by agro-ecological approaches to weed management in diversified cropping systems and non-crop situations.

Glyphosate is sprayed on numerous crops and plantations, including about 80% of genetically engineered, or GE crops, as well as a pre-harvest desiccant, which results in high food residues. It is also widely used in home gardens and public places including roadsides, and semi-natural and natural habitats. Due to its widespread use residues are now detected in different types of foods, drinking water, wine and beer; and even in non-food products derived from GM cotton. The extent of human exposure is confirmed by the presence of glyphosate in human urine wherever it has been tested, principally in Europe and North America; it has also been found in breast milk in the USA.

The 2015 classification by the International Agency for Research on Cancer (IARC) of glyphosate as a probable human carcinogen resulted in widespread concern about its continued use, especially pre-harvest and in public places.

As a result, national bans and restrictions, and voluntary action by local authorities and retailers to curb use are rising dramatically. Sri Lanka was the first country to ban it completely, although the ban has recently been relaxed to allow use in tea plantations; Italy has banned pre-harvest use, and all use in public places and those frequented by children and the elderly; France is phasing out the use of pesticides in towns and public areas; and the European Union has extended approval for glyphosate for only 18 months instead of the usual 15 years. The research and evidence detailed in the review released today provides valuable scientific evidence for all communities wanting to follow these leads.

Environmental impacts detailed in the monograph are no less concerning, and include adverse effects on ecosystem functioning, pollination services, biological controls, soil fertility and crop health. Residues are widespread in the environment, including in rainwater, surface and ground waters, and the marine environment. Glyphosate can persist in some soils for up to 3 years; and there is some evidence of bioaccumulation.

Resistance to glyphosate is now recorded in 35 weed species and in 27 countries, mostly caused by the repeated use of glyphosate in GE crops, no-till agriculture, and amenity use.

The monograph also contains a useful section on alternative weed management and provides information

on a wide variety of non-chemical approaches to weed management in various situations.

Keith Tyrell, Director, PAN-UK:
â€œThis new study from PAN International's team of scientists clearly shows that glyphosate can cause a multitude of health and environmental problems. Our regulator's need to wake up and ban this chemical now.â€?

Dr Meriel Watts, PAN New Zealand:
â€œThe time has come for global recognition of the widespread harm caused to people and the environment from the constant use of glyphosate. For too long regulators have ignored the mounting evidence of damage, hiding behind unpublished studies by Monsanto, which not surprisingly paint a picture of a benign chemical startlingly at odds with reality.â€?

Fernando Bejarano, PAN Mexico (RAPAM)
â€œThe intrinsic hazards of glyphosate and their use in tolerant transgenic crops are unacceptable if we want to achieve a sustainable food system, so we need a global phase out and a shift in policies promoting instead agroecological alternatives for weed control and crop rotation in diversified crop systems.â€?

Dr. Peter Clausing, PAN Germany:
â€œIn 2017 the European Chemicals Agency has to decide whether it accepts the compelling evidence for glyphosate's carcinogenicity and declares it a carcinogen. This would be an overdue acknowledgement of the reality.â€?

Dr. Emily Marquez, staff scientist, PAN North America:
â€œThe glyphosate mess illustrates the problems with industrial agriculture. Farmers are again trapped on a pesticide treadmill, as widespread adoption of Monsanto's genetically engineered â€œRoundup-Readyâ€? crops resulted in glyphosate-resistant superweeds. And yet again, human health impacts of the chemical come to light after years of widespread use. It's time to shift away from this failing cycle of chemical reliance.â€?

Jayakumar Chelaton, PAN India
â€œEvery month we get a new story of how glyphosate is harming people in the farms and off farms in rural India. It is clearly damaging people and planet.â€?

Sarojeni V. Rengam, PAN Asia and the Pacific
â€œGlyphosate is a highly hazardous pesticide. There are other ecosystem based non-chemical alternatives that do not require the use of such hazardous herbicides. We therefore urge Monsanto and other agrochemical corporations to stop the production and marketing of glyphosate in order to ensure the health of people and the environment.â€?

Dr Angeliki Lyssimachou, PAN Europe
â€œThis remarkable compilation of scientific studies reveals that glyphosate-based pesticides -despite what their manufactures' claim- are far from â€˜safe'. Hundreds of non-industry funded studies show that these products are gradually poisoning our people, our environment and its ecosystems. Regulators must stop playing blind and take action to ban all uses of glyphosate.â€?

> Pestizide: Europas ZYNISCHER Giftexport | Doku HD Reupload --ARTEde == 1.8K views â€¢ 6 hours ago
> Dokumentarfilm von Stenka Quillet (F/BR 2022, 82 Min)
>
> 11,638 views Dec 1, 2025 #umwelt #gift #pestizide
> Der investigative Film spÃ¼rt Pestiziden nach, die in Europa verboten sind und in LÃ¤nder exportiert werden, in denen ihr Einsatz erlaubt ist â€“ vor allem nach Brasilien. Von hier aus werden die RÃ¼ckstÃ¤nde der Gifte in Orangen, Kaffee und Soja zurÃ¼ck nach Europa geschickt. Die Folgen dieser EU-Doppelstandards kÃ¶nnten sich durch das EU-Mercosur-Abkommen kÃ¼nftig noch verschÃ¤rfen.
>
> Der Dokumentarfilm geht einem wenig beleuchteten Wirtschaftskreislauf auf den Grund: Deutschland, das sich zunehmend gegen Umweltgifte sperrt, ist noch immer der wichtigste Importeur von brasilianischem Kaffee voller PestizidrÃ¼ckstÃ¤nde. In ganz Europa trinken die Menschen Orangensaft, der aus stark belasteten FrÃ¼chten aus Brasilien gewonnen wird. Und diejenigen, die in SÃ¼damerika die Gifte ausbringen, mÃ¼ssen mit ihrer Gesundheit teuer dafÃ¼r bezahlen.
> Die europÃ¤ischen Staatschefs kritisieren Brasilien nur allzu gerne ob der BrÃ¤nde im Amazonasgebiet â€“ schauen aber wohlweislich weg, wenn ihre eigenen Chemiekonzerne dort gute GeschÃ¤fte machen.
> Mehr als die HÃ¤lfte aller Pestizide, die vor kurzem auf den brasilianischen Markt kamen, sind in der EU aufgrund ihrer GefÃ¤hrlichkeit fÃ¼r Gesundheit und Umwelt verboten. Die in Europa hergestellten und zugleich verbotenen Produkte finden auf der SÃ¼dhalbkugel dankbare Abnehmer. Laut der Schweizer NGO Public Eye erzielen die europÃ¤ischen Herstellerfirmen durch diese extrem schÃ¤dlichen Pflanzengifte, die an Entwicklungs- und SchwellenlÃ¤nder verkauft werden, beinahe die HÃ¤lfte ihres Gesamtumsatzes.
> Der Dokumentarfilm zeigt, dass sich die europÃ¤ische Politik kaum mit diesem Thema befasst.

An den Grenzen wird kaum kontrolliert, die Gesetzgebung nimmt chemische RÃ¼ckstÃ¤nde in Lebensmitteln in Kauf und die wirtschaftlichen Akteure sind vor allem bemÃ¼ht, ihren eigenen Status quo beizubehalten.
Die Folgen dieser EU-Doppelstandards kÃ¶nnten sich durch das EU-Mercosur-Abkommen, das von Kritikern als Angriff auf Klima, Menschenrechte und demokratische Kontrolle bewertet wird, kÃ¼nftig noch verschÃ¤rfen.

In early January 2022, three environmental defenders of the same family were found dead in SÃ£o Felix do Xingu, south of the state of ParÃ¡. JosÃ© Gomes, known as ZÃ© do Lago, MÃ¡rcia Nunes Lisboa and their teenage daughter Joene Nunes Lisboa were executed with multiple gunshots and their bodies were found near their home. ZÃ© do Lago and MÃ¡rcia lived in the Muruca region for over 20 years, where they developed a project to repopulate local waters with baby turtles. A police investigation into their murders is ongoing.

https://www.nationofchange.org/2024/12/06/glyphosate-exposure-linked-to-brain-inflammation-and-neurodegenerative-risks/

Quick summary:
â€¢ Glyphosate exposure in mice caused persistent brain inflammation and Alzheimer"s-like pathology.
â€¢ Even low doses of glyphosate, deemed safe for humans, resulted in lasting neurological damage.
â€¢ Glyphosate"s metabolite, AMPA, accumulates in brain tissue and crosses the blood-brain barrier.
â€¢ Widespread use of glyphosate exposes most Americans, especially farmworkers, to potential risks.
â€¢ Researchers challenge EPA safety standards, urging reevaluation of acceptable exposure limits.
â€¢ The herbicide"s effects on brain health add to existing concerns about its environmental impact.
â€¢ Scientists call for more research and stricter regulations to mitigate public health risks.

Is Ry quoting a 'TASS' report and adding a few lines?

> To treat a cancer you would need to take the malignant cells from that person with whatever type of cancer it was and reintroduce that with tumor markers back in to direct the immune system, hoping the body would flush it out on its own. That's already been done for HPV and some types of Melanoma.

It is not a "cancer vaccine" its gene therapy and it would need to be specific to each individual. Thus not universal like vaccines. Because cancer is cell mutation where cells begin mitosis prematurely. And every person has different cells from every other person on the genetic level.

And there are no clinical trials of such mRNA treatment that exist. It would also take months if it worked at all to produce the right antigens.

You can call it "mRNA vaccine" like the covid kooks. But gene therapy is completely different than inducing an antigen by introducing a weaken or inactive virus to trigger the immune system to develope antibodies for that virus.

Because cancer isn't a virus. You would need to react after they already have cancer and try to prevent it from spreading by doing gene therapy. Easier said than done. And this TASS report is being waved around by retards who either didn't read it or didn't understand what they read.

>
> ---------- Glyphosate and Celiac Disease: A Hypothesis Worth Testing -------- Dear Editor
>
> We read with great interest the State of the Art Review by Doyle et al. on celiac disease.Â¹ The authors rightly point to the role of undefined environmental factors in its rising incidence. In this context, we believe the potential role of glyphosate-induced dysbiosis warrants discussion.
>
> Current evidence does not demonstrate a causal link between glyphosate exposure and celiac disease. The strongest data have shown that celiac disease requires gluten and HLA susceptibility, while the putative environmental â€œtriggerâ€? remains undefined.Â¹ At the same time, dysbiosis is increasingly recognized as a cross-cutting mechanism in immune-mediated and metabolic disorders, including celiac disease, though cause and effect are often difficult to disentangle. Experimental work suggests glyphosate and some formulations can perturb microbial communities, but these findings are largely preclinical, frequently use supra-dietary doses, and are methodologically heterogeneous.Â² In short, biological plausibility exists, but clinical causality has not been established.
>
> Given the ubiquity of exposure, the public health burden of celiac disease, and the central role of the microbiome in mucosal immunity and oral tolerance, this hypothesis is too important to dismiss on the basis of imperfect early studies. What is needed now are rigorous, human-focused investigations: prospective cohorts in genetically at-risk children with repeated, objective measurements of glyphosate exposure and microbiome structure; natural-experiment designs comparing regions with differing pre-harvest practices; and carefully controlled dietary studies at realistic exposure levels that incorporate immunologic, microbiome, permeability, and histologic endpoints. Attention to dose, co-exposures, and formulation transparency will be essential.
>
> While no clinical recommendations should change today, it is both reasonable and responsible to invest in high-quality research that can resolve this question. If a small but real effect exists in genetically susceptible individuals via dysbiosis, clarifying it would have meaningful implications for prevention

and regulation. If, instead, robust studies show no effect at realistic exposures, that conclusion would be equally valuable for patients, clinicians, and policymakers.

> Why we're programmed to enjoy work (and reject gold) ---------- Stephanie McPeak Petersen
> 60 views / 1 hour ago — 3.57K subscribers -- 201x/5h ... Jan 3, 2026
> Why does work feel rewarding? Why are we chemically reinforced, through dopamine, to stay productive, compliant, and willing to â€œlet things goâ€?? And why does real value seem to threaten the system while wealth itself is something we're taught to reject?
>
> Starting with a working dog bred to love her task, this video explores how dopamine shapes behavior in both animals and humans. From labor and consumption to forgiveness and spiritual obedience, we examine how reward systems may be used to guide productivity, discourage resistance, and quietly transfer wealth through overproduction and overconsumption.
>
> This is a philosophical decoding of work, value, and money... touching on the difference between price and value, the symbolism of gold, and why saving real value has always been discouraged... an inquiry into when our effort serves life and when it feeds the system.

> Nov 11, 2025 ---- 2 views Nov 11, 2025
> The glyphosate cancer link.
> https://bumpinginto.podbean.com/e/the-glyphosate-cancer-link-with-nick-dugmore/
>
> After being diagnosed with bowel cancer, South Australian grape farmer and winemaker Nick Dugmore is on a mission to uncover the truth about glyphosate â€” one of the most widely used weed killers on the planet.
>
> In this powerful conversation, Nick opens up about his personal journey, his shocking discoveries about chemical use in agriculture, and the growing evidence linking glyphosate exposure to serious health risks.
>
> If you care about the food you eat, your exposure to toxins or the future of farming, this is an episode you can't afford to miss.

> The same thing is happening with glyphosate. The big difference is, smoking is my choice, glyphosate is not. We can't wait for thousands more research papers. Chronic illness is on the rise and even if we got rid of glyphosate tomorrow, it would take decades to be properly rid of it.

not a big listenfan but 'Farmer's Footprint' people in Oz do feed me useful names by n by:

> Poisoned Fields - Glyphosate, the underrated risk? (Full Documentary) -- wocomoDOCS --- 167K Vws / 9ya

very condeming testimony in the field 11th minute ...
Guenter Neumann UvHohenheim
2 years after publishing the findings [use beyond a few years guarantees long term ruination for weed and crop alike] an industry pawn ... prez of german farm ass. rez infiltrant PsyCop Joachim Rukwied holds forth in a glass walled conf room in front of sated, paunched and slumped adjacents that he's never even heard such a thing .... .. iow, he sacrifices his 300thou head human herd no sweat. And they allowed him to wear a Syngenta hat without protest before this outrage ... so they had their very predictable reward coming. How do cancer rates amongst their loinsproing compare to that of Bhutanese colleagues i wonder??
Anybody know? Anybody EVEN FUCKING have the balls to WANNA know besides me????

After a bunch more harrowing facts it's the EU appointed colleague of Rukwied's turn, Jaap van Wenum ...

btw, when the industry claims it's "not toxic" they are in fact not lying cause it's impersonator incapable of performing what it is being taken for ... disguised as ... and dresscode precludes clear visibility of castration [glyphosate is chemically castrated glycine], hence a body part hard up for glycine takes a cursory glance and says 'you're hired'. It's the cumulative effects [this stuff manages to stay in one piece for 20 years unless we make a medicine out of cyano-bacteria] of this blockage, one molecule at a time, that eventually grinds biology to a halt, .. in the meantime it's Pandora's Box of complaints that ensue from the "lying for profit" businessmodel that has totally destroyed all the good good money ever did and worse .. cause it is no wonder America hating pajeets are taking it over [and only outlier like Josh Moon and Mark Kulacz complaining] if they are motivated by something similar and in parallel to 'revenge

for the opium wars, namely the massive wave of Indian farmer suicide which all those who should and could have heeded Guenter Neumann's warnings TEN YEARS AGO, must be called to account for PRONTO!!!!!!!!!!!!!!!!!!!!!!!!!

Did you get all that?

The Apple version asks to sign in to this 'explicit' episode
wgcsa == Wine Grape Council of South Australia

> 9:56 --- For glyphosate the data consistently showed, that the levels of residue that were present 6 months after the application were as high, as one would expect directly after the spraying - while two meters over, where the field was treated only for a short time, all levels
> were below the detection limit.
> 10:22
> If the healthy and sick areas weren't directly next to each other, the increase in plant disease and soil infertility wouldn't have been noticeable, because it happens so slowly. The farmers sought to increase their yields though using more fertilizer, which didn't help. An affected farmer prefers to stay anonymous. He received a threatening call. He shouldn't speak badly about glyphosate on camera. "I realized, since I started to spray glyphosate", he says, "that the dwarf virus began to spread dramatically. In dry years it was extreme. On some fields it caused a total yield loss. And there were years where the yield was 50% compared to the previous year. But interestingly enough, this was only observed in the long-term treated areas, and not where it was used for only 2 or 3 years. The plant physiologist observes further effects on the plants, which until now have been overlooked.
> 11:33
> With new molecular biological methods, we could show which genes are down regulated, and that hormonal disturbances are occurring. There were also negative effects on physiological processes, which are part of the natural stress response. These were also down regulated in the damaged plants. There was also an impact on genes involved in water-intake. These became less active, and also hindered the extension of the lateral roots. The official industry version claims: glyphosate only inhibits a single enzyme. This is intentional and kills the unwanted plants. But GÃ¼nther Neumann proved that glyphosate and it's metabolites also change genes that are involved in root growth, water intake, and stress resistance. Under laboratory conditions, the scientists rule out other disruptive factors. The picture remains the same. Here we see an unharmed wheat root system, showing many fine roots. Over here is the same part of a damaged plant.
> 12:58
> It clearly shows far far fewer fine roots. This means, that the treated plants don't take water in as efficiently. Nevertheless the manufacturers continue to advertise that glyphosate helps fields to stay sustainably fertile â€“ even in dry areas. 2 years after the publication of the Hohenheim data, the president of the German Farmers' Association takes a stance on glyphosate. He has never heard of their findings.
> Joachim Rukwied President German Farmer Association DBV. Until now, there is no scientific evidence, that glyphosate has negative effects on soil fertility, and in Germany we apply glyphosate only to distinct areas, in minimal amounts.
> Joachim Rukwied represents 300000 farmers in the farmers association. And he is also the President of the German lobby organization "Forum of Modern Agriculture," where he represents glyphosate producers like Syngenta, Monsanto, and others.

Credit: MIDDLE TEMPLE LIBRARY / SCIENCE PHOTO LIBRARY
Rembert Dodoens (1517-1585), Flemish physician and botanist. Born at Mechelen, he studied at the University of Leuven, graduating in 1535. He set up as a physician and was very sucessful. He turned down positions at Leuven and with Philip II of Spain, deciding to serve Rudolph II at Vienna as court physician instead. He wrote a herbal entitled Cruydeboeck that contained 715 illustrations. He divided the plant kingdom in seven groups and paid particular attention to medicinal herbs. The book was translated into French, English and Latin and in its day was the most translated book after the Bible. It was used as a reference for two centuries. In 1582 Dodoens returned to Leuven to take the chair of medicine, and stayed there until his death. This engraving comes from van Meurs' Illustris Academia Lugd-Batava, printed at Leiden in 1613.

Spirulina cyanobacteria.
https://www.sciencephoto.com/media/854297/view
Credit STEVE GSCHMEISSNER / SCIENCE PHOTO LIBRARY
Scanning electron micrograph (SEM). Spirulina is a gram negative, non-toxic species of cyanobacteria with a wide array of uses in the natural and commercial world. While many bacteria are known for their pathogenic effects, Spirulina is primarily known across the world for its potential nutritional value. It is one of the rare edible bacteria. Historically, it is known to have been regularly consumed by the Aztecs and tropical climate populations where it was often dried into flat patties for easy consumption. More recently, the consumption of this species has been shown to lower blood pressure and reduce cholesterol, which are two of the most prevalent health concerns in the modern world. Magnification: x3500 when printed 10 centimetres wide. Specimen collected from Vietnam courtesy of Mike Allen, Plymouth Marine Laboratory.

DENNIS KUNKEL MICROSCOPY / SCIENCE PHOTO LIBRARY -------- Coloured scanning electron micrograph (SEM) of Marine cyanobacterium (Spirulina platensis) is a Gram-negative, oxygenic, photosynthetic, filamentous cyanobacterium (prokaryote). Spirulina platensis (also known as Spirulina pacifica or Arthrospira platensis) is a marine cyanobacterium in the family Phormidiaceae. A. platensis is known throughout the world for its potential nutritional value. It is one of the rare edible bacteria due to its low purine concentration, which allows it to pose very minimal risk of uric acid build up in the body. The supplement called Spirulina is made in Hawaii, USA. Magnification: x160 when shortest axis printed at 25 millimetres.

2. The Herbal in the Low Countries.
In the sixteenth century, the Herbal flourished exceedingly in the Low Countries. This was due in part to the zeal and activity of the botanists of the Netherlands, but perhaps even more to the munificence, and love of learning for its own sake, which distinguished that prince of publishers, Christophe Plantin of Antwerp. In these qualities he forms a notable contrast to Egenolph of Frankfort, to whose shortcomings we have already drawn attention.

Plantin's life extended from about 1514 to 1589, and thus included the central years of that wonderful century. He was a native of Touraine, and studied the art of printing at Caen and other French towns. Towards 1550, he and his wife, Jeanne RiviÃ¨re, settled in Antwerp, where he worked at book-binding, and his wife sold linen in a little shop. Later, he returned to the profession of printing, and his business in this direction gradually developed, and was eventually transferred to the famous Maison Plantin. Christophe's reputation grew to such an extent that great efforts were made, in various quarters, to tempt him from Antwerp. The Duke of Savoy and Piedmont, for instance, did all he could to persuade him to come to Turin, promising him extensive printing works and all necessary fundsâ€”but he remained faithful to the city of his adoption. Perhaps the most potent factor in his success was his keen judgment of men, which enabled him so to choose his subordinates that he gathered around him an unrivalled staff.

One of Plantin's daughters married Jean Moretus, her father's chief assistant and successor, and from him the business descended through eight generations of printers to Ã‰douard Jean Hyacinthe Moretus, the last of his race, from whom, in 1876, the citizens of Antwerp purchased the Maison Plantin and its contents. The house had remained practically unchanged since the days when Christophe Plantin lived and worked there, and it is now preserved as the MusÃ©e Plantin-Moretus. It is built round a rectangular courtyard, and its beauty, both in proportion and in detail, is such, that one feels at once that Plantin achieved the ambition --71-- he expressed in his charming sonnetâ€”â€˜Le Bonheur de ce Monde'â€”"Avoir une maison commode, propre et belle."

Rembert Dodoens, 1517-1585 [A Niewe Herball, translated by Lyte, 1578]. ---------- The pictures, furniture and hangings, and not only the very presses, fonts, and furnaces for casting the type, but even the old account books and corrected proof-sheets are still to be seen, all in their appropriate places. The72 wage-books are preserved, showing the weekly earnings of compositors, engravers and book-binders, throughout a period of three centuries. In short, the Maison Plantin beggars description, and a visit there is an infallible recipe for transporting the imagination back to the time of the Renaissance, when printing was in its first youth, and was treated with the reverence due to one of the fine arts.

The first Belgian botanist of world-wide renown was Rembert Dodoens [or DodonÃ¦us] (Text-fig. 36). He was a contemporary of Plantin, having been born at Malines in 151711. He studied at Louvain, and visited the universities and medical schools of France, Italy and Germany, eventually qualifying as a doctor. He was successful in his profession, being physician to the Emperors Maximilian II and Rudolph II, and finally becoming Professor of Medicine at Leyden, where he died in 1585. His interest in the medical aspect of botany led him to write a herbal, and, in order to illustrate it, he obtained the use of the wood-blocks which had been employed in the octavo edition of Fuchs' work. To these a number of new engravings were added. The book was published in Dutch in the year 1554 by Vanderloe, under the title â€˜CrÇ”Ã¿deboeck.' The text is not a translation of Fuchs, as is sometimes supposed, although Dodoens took Fuchs as his model for the order of description of each plant. The method of arrangement is his own, and he indicates localities and times of flowering in the Low Countries, information which clearly could not have been derived from the earlier writer. Almost simultaneously with the first Dutch edition, a French issue appeared under the title of â€˜Histoire des Plantes.' The translation was carried out by Charles de l'Ã‰cluse, with whose own work we shall shortly deal. Dodoens supervised the production of the book, and took the opportunity to make some additions. It became known in England through Lyte's translation, which will be discussed in a later section of this chapter.

The last Dutch edition of the herbal, for which the author himself was responsible, was printed by Vanderloe in 1563. The publisher then parted with Fuchs' blocks, 73which were probably acquired by the printer of Lyte's Dodoens in England. This circumstance put great difficulties in the way of Dodoens' wish to reproduce his herbal in Latin. However it proved a blessing in disguise, for he had the good fortune to meet, in Christophe Plantin, "un74 homme qui ne reculait devant aucune dÃ©pense, pour donner aux ouvrages qui sortaient de ses presses toute la perfection et le mÃ©rite dont ils Ã©taient susceptibles." Plantin undertook to produce a much modified Latin translation of the herbal, and to have new blocks engraved for it, whilst Dodoens, on his side, engaged to supply the artists with fresh plants, and to superintend their labours. The work proceeded slowly, and was published in parts. It was finally completed in 1583, and was produced in one volume, under the name of â€˜Stirpium historiÃ¦ pemptades sex sive libri triginta.' In this work, by far the larger number of the figures are original (see Text-figs. 37, 38, 96 and 97); some, however, were borrowed from de l'Ã‰cluse and de l'Obel. This arose from the fact that Plantin was also the publisher for both these writers, and as he bore the expense of their blocks, he had an agreement with the three authors that their illustrations should be treated as common property. A few of Dodoens' figures were based upon those in the famous manuscript of Dioscorides, now at Vienna (see pp. 8, 85, 154).

In the â€˜Pemptades,' the botanist in Dodoens was more to the fore, and the physician less in evidence than in his earlier work. It is particularly difficult to appraise with any exactness the services which Dodoens rendered to botany. Between him and his two younger countrymen, de l'Ã‰cluse and de l'Obel, there was so intimate a friendship that they freely imparted their observations to one another, and permitted the use of them, and also of their figures, in one another's books. To attempt to ascertain exactly what degree of merit should be attributed to each of the three, would be a task equally difficult and thankless.

The Global Glyphosate Study: the most comprehensive study on world's most-used pesticide, GLYPHOSATE
Health and Environment Alliance - HEAL
410 subscribers
887 views Jul 1, 2021 #Glyphosate #BanGlyphosate #StopGlyphosate
Revisit this special webinar organised by the Health and Environment Alliance (HEAL) in collaboration with the Ramazzini Institute, where lead scientists presented the ongoing Global Glyphosate Study, the largest and most comprehensive toxicological study ever undertaken on a pesticide.

Glyphosate is the most widely-used pesticide in the world. Exposure to glyphosate-based herbicides has been linked to certain types of cancer, as well as to adverse effects on the development and hormonal system.

The EU and member states are gearing up to review the current approval of glyphosate, which expires in 2022. The Global Glyphosate Study led by the Ramazzini Institute aims to provide important evidence to this process. The study brings together some of the best independent scientists from the EU and the U.S. to investigate the health impacts of glyphosate and glyphosate-based products at low, real-life exposure levels.

Listen to Dr Fiorella Belpoggi from the Ramazzini Institute present the ground-breaking Global Glyphosate Study, what it aims to investigate and its preliminary results. Her presentation is followed by a scientific panel discussion with Dr Michael Antoniou from King's College London, to respond to key questions in relation to the toxicity assessment of glyphosate and the protection of public health.

To find out more about HEAL's work to minimize exposure to toxic chemicals, visit our website and sign up to our newsletter: https://www.env-health.org/

vicious cycles run in vicious circles .. getting nowhere .... case in point, ... a repeat of this 2021 effort recently:

https://www.env-health.org/reach-letter-ec/
13th January 2026
Letter from HEAL and 17 health groups to EU Commission President: REACH health priorities
HEAL and seventeen of its member and partner organisations, representing doctors and medical professionals, patients, health insurers and public health experts, have sent a letter to EU Commission President Von der Leyen on the issue of the REACH revision.
The organisations call on the European Commission to ensure that the REACH revision will deliver the long-awaited improvement of human health protection from harmful chemicals.
Diseases associated with exposure to hazardous chemical substances include cancer, neurological, metabolic and endocrine disorders, allergies and other acute and chronic health effects.

A health-centred REACH revision would align with the commitments of the EU's Chemicals Strategy for Sustainability, the Zero Pollution Action Plan, Europe's Beating Cancer Plan and the European Cardiovascular Health Plan. It is urgent to ensure the EU chemicals policy fully encompasses the latest scientific recommendations and reflects real-world exposure.

herbicide resistance in plants

2.
why herbicide toleranceplants? - Weeds are unwanted and useless plants that grow with the crops these are compete with crops for light, place, food resulting reducing crop quantity - Approximately 20% of production lost through weeds infestation per annum - Weeds are controlled either mechanically or culturally tisuse are expensive and cause damage to crops and soil.
3.
Herbicides: - The chemicalcompounds which kills the weeds - these are 2types 1) Narrow spectrum 2) broad spectrum - Mostly used herbicides are broad spectrum they kills broad range Ideal herbicide have the fallowing characters : 1. Killing weeds without affecting crops 2. No toxic to animals and MOS 3. Rapidly translocate in trangent plants 4. Rapidly degraded in soil.
4.
Glyphosate resistance - Glyphosateis glycine derivative - It is a broad spectrum herbicide it acts on shikimate pathway - Glyphosate acts as competitive inhibitor of 5-enoyl pyruvate shikimate 3-phaspate synthase(EPSPS) it is a key enzyme in shikimate pathway - which is important for production of aromatic aminoacids phenylalanine, tryptophan, and tyrosine
5.
- The enzymeEPSP synthase catalyses the synthesis of 5-enoylpyruvateshikimate 3- phospate from shikimate 3-phospate & phosphoenolpyruvate - Glyphosate more tightly bind with EPSP synthase - Because glyphosate has structural similarity with substrate phosphoenoyl pyruvate - So blocks the shikimate pathway
6.
+ Glyphosate X X X Shikimic acid+ Phosphoenol pyruvate 3-Enolpyruvyl shikimic acid-5-phosphate (EPSP)

Plant EPSP synthase Aromatic amino acidsWithout amino acids, plant dies X

7.

Detoxification in trangentplants - The aroA gene convert glyphosate into non herbicidal compound - So the shikimate pathway is continue and produce amino acids - These genes are characterized from Salmonella species - Introduced into plant system it become resistant to glyphosate

8.

PHOSPHINOTHRICIN RESISTANCE(Glufosinate) - Mechanism: - phosphinothricinacts as competitive inhibitor of enzyme glutamine synthase - Glutamine synthase is an enzyme which convert ammonium into glutamine - when Glufosinate is spry It blocks the Glutamine synthase - SO NH3 levels increase in plant it leads to death of plant. - NH3 Glutamic acid Glutamine GS PPT

9.

Detoxification in trangentplants - The bar genes codes for phosphinothricin acityle transferase enzyme it converts the phosphinothricin into non herbicidal compound by transferring acityle group. - So the plant will be resistant to PPT. - These genes are charectarised from Streptomysis species - and introduced into plant system by using CaMv 35s promoter. NH3 glutamic acid glutamine GS PPT

10.

Bromoxyline - It isalso most widely used herbicide - Its acts on PS-II - Bromoxyline is binds to Quinone complex of PS-II it inhibits the electron transfer - It leads to death of plant

11.

Detoxification in trangentplants - The bxn gene codes for nitrilase - It convert the bromoxyline into 3,5 di bromo 4 hydroxyl benzoic acid & ammonia which is non herbicide compound - These genes are characterized from klbsepsella - nitrilase NH3

13k views --------- herbicide resistance in plants

Herbicide tolerance plants are developed to control weeds that compete with crops for resources and can reduce crop yields by 20% annually. Weeds are typically controlled mechanically or through herbicides. Glyphosate is a commonly used broad-spectrum herbicide that acts by inhibiting the shikimate pathway enzyme EPSP synthase, preventing aromatic amino acid production. Transgenic plants are made tolerant to glyphosate by introducing the aroA gene to allow continued shikimate pathway function. Phosphinothricin resistance is conferred by the bar gene, which allows detoxification of the glutamine synthase inhibitor phosphinothricin. Bromoxynil tolerance results from the bxn gene introducing nitril

https://test34563456.blogspot.com/2026/01/global-glyphosate-study-5ya.html
glyphosate exports from china totaled more than a quarter of a million tons last year, well over 3x the second 'best/worst' pesticide and 6x the amount of 3rd placer 2.4-D [banned in most EU countries i believe]

version 3

How To Remove Glyphosate From The Body And Restore Digestive Health

Glyphosate is derived from chemically torturing and castrating one of the smallest and oldest [longest pedigree] hence most reverence, awe and respectable amino acids: GLYCINE

= 'after' is rich cause the first thing a foetus forms is the asshole .. so we know where your /our /evree bod's head is 'at' and, if not 'up there' way too much like that of the most self delusional privateurz and deprivatards, then at least and certainly longer there than anywhere else. A head preparing compostage con[countering]tributes is happiest and best in line with sane expectations, natural course of events .. etcetera.

the body's submolecular vetting 'agents', specially when in dire need for stuffs like glycine [under denatured feed conditions] is willing to accept the flawed copies [under some sort of unwritten 'better than nothing' rule we see all around us in adoption practices goin lengths {and strengths let's not forget} of extreme absurdity] and find it is deceived by invasives and inveiglers in disguise, who, once snug in a place they 'fit' yet disfunction in, proceed to block and are certainly NOT easy to "remove" [per the title of this {6yo} article from an at least in part very woowy site which i turned into a 3 post thread yesterday with my first and second contributions in 1st and second place from respectively 4 and 2 years ago]. This fresh 3rd comment is thus the 'scheepsrecht' one and if i do not get a better response this time i guess i am officialy the owner of the vessel i am filling this very fingertiptap moment by moment mentation and mend i can contain contention with canta zion in .. zonin the ziownin as i always do in the darkback of my forefrontmind.

a note on the perps:
'presearchers' of/for and 'after'# industrial strength cleaning prod ducts [... you no ... dat pipage ... which they use to siphon all de-autonomizing, dissanctifying and delegatory disservice - legalized robbery for short, in a pile shovery for sure], in one word thanatopians of/in/since the 50s

why am i still the only one considering this thread worthwile .. ?
is china still producing half a billion tons per year for the global 'murkit'?

BEST recovery TIPS: .. oldest smallest and most reverence worthy amino acid, glycine got chemically castrated by thanatopians, as i said ... all chemists who do not follow the footsteps of Julius Hensel [granpappee of INorganic ag in the 2nd half of the 19th century] closely are that btw and i too have done a poor job of acting on his urgings .. but in some twisted way, i AM reliving his .. his hunches & hauntage. Still poor and too offputting for a mass audience unable to get to finer points past bypassed and/or after detouring the cringe ... what do i think they are? Kailash circling prostrativists? Good enuff to simp to masochists?

i meant to say i did poorly ... compared to the possibilities along said {or typed rather} lines within my grasp. ... i flubbed, i fumbled ... i phailed ....

... sigh ... bit of a false start and/or long preable for
LIFE SAVING TIPS perhaps ... let me try again:

GLYCINE: it lubes digestions .. specially nether parts ... glyphosate lames, numbs and paralyzes, the signals go silent and you get tinnitis instead
.... hence .. be very wary of constipation [at the root of most clottage, blockage and 'tumorist' processes, imo]
One little cheap simple trick i found helpful, besides dialing intake waaaaaay down, sobering it up, etc, is .... [and btw, it only works when your intake has enuff sauerkraut, linseed and the like] hoppin up n down, landin on your heals w stretched legs ... doin 'bonky' walks, .. a matter of swayin hips instead of bending knees ... bein world's first grippy AND to far ahead for anyone to notice is what keeps me alive more than anything ...

please use my case to bring down Bayer / Monsanto .. i cannot even get Klinghardt student to call his attention to it, much less present it as a challenge only the likes of him can actually repair better than celebrated instead of harassed doctors

Bring down the entire pharmafiyac biocidally terminal 'stop op' either way .. and give 'piety pietish peace' a chance, a grip and not an off handed shrug or fingerflip.

ps: been able to dial back fulvine intake almost completely .. it was a lifesaver while i needed it tho ... found via the digins Seneff has been doin with so little effect to our worlwide shame instead of deserved acclaim.
I herewith thank her and and the pfc pagemaker who's already dead if i remember correctly .....

let us all ride into battle together and beat the dumbos like RezFrackPrez Trumpie duh true 'stumper', a word denoting 'klutz' in dutch.

> Uncovering America: Inside 'Cancer Alley': A legacy of systemic racial discrimination in the U.S.
> CGTN == 4.57M subscribers [sino gvt channel]
> 459 views Jan 21, 2026
> The 85-mile industrial corridor from Baton Rouge to New Orleans in Louisiana, known as "Cancer Alley," is densely packed with hundreds of chemical and oil-and-gas facilities. Most of the local residents are people of color, chronically exposed to polluted environments, while U.S. government intervention in water quality and food safety remains extremely limited. Residents grow up witnessing refinery flares, oil spills, and water warnings, and their risk of developing cancer is over 40 times higher than the national average.

i applaud all focus on this 'themeplex' .. but also have a suggestion that will widen your reach multiple times over ... do a vid comparing this type of evil with the half a billion tons of glyphosate produced in china yearly. Did i get that number right?

> Dr. James Rietveld's Salon Lecture on Artemis of Ephesus November 2020 --------Ipso Facto --- 371 subscribers
> 241 views Nov 29, 2020 #artemis #ancienthistory #history
> Delving into personal religious perspectives and relationship to the Ephesus's sacred geography, Dr Rietveld will discuss how this belief system permeated the daily lives of the Ephesians via material culture they left behind. Although understandings of Artemis Ephesus changed as Christianity spread, her legacy survived as goddess of protection, material prosperity, and guardian of virginal chastity.
> Artemis Ephesia was a figure in constant flux, with interpretations dependent on the particular time period and audience viewing it. Artemis Ephesia had an

interesting relationship with the city's sacred geography, where her worship permeated the daily lives of the Ephesians .As Christianity spread, Artemis Ephesia eventually succumbed to the forces of the new religious perspective, yet some aspects survived. Ultimately, Artemis Ephesia, was a goddess of protection, her sacred space understood as a place of asylum for individuals seeking refuge; a bank for those wishing to secure their material wealth, and a shrine for virgins desiring to protect their chastity. Via the Via Sacra, Artemis' role as protective mother extended beyond the Temple of Artemis to the city itself, and throughout the Greco-Roman world via the Via Sacra and Ephesian Letters. Along with the images of Artemis, the Ephesian letters carried her perceived magical protective powers even further, all along the shores of the Mediterranean and even to the very ends of the Greco-Roman world.
Our lecturer, Dr. James Rietveld has written a definitive book "Artemis of the Ephesians" which is available on Amazon.
Dr. James D. Rietveld is an adjunct professor at California State University, Fullerton, CA and Cal Poly, Pomona, CA in both History, Anthropology and Religion. His specialties include the History of Christianity in the Early, Medieval and Byzantine periods, New Testament Studies and Greco-Roman religions. He received his PHD from Claremont School of Religion and is the author of another book entitled "London in Flames: Apocalypse 1666.
Ipso Facto is a gothic/pagan retail store located at 517 N. Harbor Bl. Fullerton CA 92832 which sells gothic apparel and accessories and presents lectures and workshops both online and in person.

@kyle7240-- 4 years ago (edited): As a student of the New Testament and early Christianity I quite enjoyed this talk for its relevance for that field of study. I was especially intrigued by the supposed paralles between Artemis and Mary though I suspect that portion as being highly speculative and lacking particular evidence except on the superficial level of the virgin mother parallel and possibly others. It did however remind me of the scripture assertion that Christ came in the fullness of times and the assertion by the second century convert Justin Martyr that similarities between certain pagan elements and the true philosophy could be the result of malevalent forces attempting to emulate elements of the true philosophy before it's entrance on the world stage. This speaks to the idea that early Christianity was very familiar with and often rebutted charges of borrowing from pagan religions.The idea of parallels and influence between Artemis and Mary while intriguing I think is an old idea that's been quite debated and possibly stems originally from Protestant apologetics against Roman Catholic belief. For example in a recent work on early Mary devotion it is stated by Stephen Shoemaker "On the one hand, there is no denying that Mary's representation and veneration have been deeply colored by the influence of earlier traditions derived from the worship of various goddesses in the ancient Mediterranean world. Yet, on the other hand, these similarities are often superficial in nature, and they can frequently distract from more fundamental differences at both the conceptual and practical levels, as is also true more generally in the early Christian cult of the saints. For instance, Mary was a human being whose primary role is to intercede on behalf of other human beings with God: is this anything like the cultic worship of Isis or Artemis? Moreover, it is a profound mistake to imagine that such parallels should somehow explain the origins of the cult of Mary and likewise reveal it as something exogenous to the Christian tradition.23 The simple truth of the matter is that a great deal of traditional Christian faith and practice reflects earlier precedents from the Greco-Roman world, not only in the case of the veneration of saints more generally, but in other areas as well, such as the Eucharist and the celebration of Christmas. So much of early Christian culture was deeply imprinted by Hellenistic precedents that one must wonder why the influence of goddess traditions on Marian piety should somehow be singled out, as it often has been.24 And as scholars have increasingly come to recognize, the Christian/pagan dichotomy that underlies such explanations is largely a false one, particularly in late antiquity.25 Moreover, Jonathan Z. Smith and Peter Brown have both drawn attention to the fact that such appeals to the "pagan" origin of certain Christian beliefs and practices, and particularly the veneration of saints, derive largely from Protestant invectives against Roman Catholicism or Enlightenment critiques of "vulgar" religious practices."

Regardless a very good and informative video and thinking to pick up the book!

Given the emphesis in the video placed on the abundance of the sources in Ephesus I am curious what early christian sources from Ephesus say regarding this parallel between Artemis and Mary as I would guess that evidence exists of early christian discussions on this topic. Perhaps Dr. Rietveld could share more specifically on the early Christian period of Ephesus.

> Carla Ionescu PhD -- Oct 14: The bees eggs are mostly wild bees, which the Ephesians saw as sacred. Here is a link to one of the articles that has images of a cluster of bee eggs, but also if you search up queen bee eggs you will see they tend to be more oval in shape which match almost identically to the other statues of Artemis of Ephesus that we found :)
> https://stefanosskarmintzos.wordpress.com/2014/03/29/the-cult-of-artemis-in-ephesus-and-the-possible-explanation-of-the-bee-symbol/
>
> Linda Rosewood -- After Santa Cruz -- Dec 30: I am completely convinced by your essay here, except that Her adornments don't look like "bee eggs" at all, any more than breasts. An actual "bee egg" is shaped like a grain of rice, a long oval. And it is always found, one at a time, at the bottom of a distinctive hexagonal chamber. So if the Ephesians, astute observers of nature, wanted to adorn their goddess with bee eggs, would they not cover her in the hexagon of the honeycomb?
>
> Given your compelling argument for bee imagery, the shapes on her chest look more to me like a stylised natural bee hive. A honey bee hive can have many shapes depending on where the bees build it, but it can descend like a semi-circle like She wears.
>
> Carla Ionescu PhD -- Jan 2: You're absolutely right that bee eggs, especially honeybee eggs, are elongated, very much like grains of rice, and they are laid individually at the base of hexagonal cells. That part is correct. I actually go into this in more detail in the book, but didnt have the space to unpack it fully in the post. One of the traditions I'm working from involves wild bees, and a specific legend that when the Amazons first brought the cult statue, described as a wooden plank or xoanon, to this site, wild bees began building directly on and around the statue itself. In that context, what is being evoked is not the honeycomb structure but the clustered protrusions of eggs or brood attached to wood or rough surfaces, which can read as circular or bulbous in form.
>
> Also, different statues render these forms differently. Some are more rounded, some more drooping, some more elongated. That variation is artistic and symbolic rather than strictly biological. There is, for example, a statue in the Vatican where the forms are very clearly elongated, almost exactly like grains of rice, which aligns closely with how bee eggs actually look. So I agree with you on the biology, and I also think what we're seeing on the goddess is not a literal hive or honeycomb, but a symbolic translation of bee life, fertility, and wild cult practice into sculptural language :)

my artemisia tea dosage strength determines the complexity of my dreams ... it might even get them 'lit up' [relit from trauma i, of course by defitinition cannot willnot and wantnot but doneed to remember? Prolly].
Picture a festival scene prep of old schoolers i miss dearly ... one of them anglo buses runs itself in the water it seems but later it appears there's a [submerged?] set of stories they simply begin loading tat on- and into.
i wander an already swelling crowd [jumpcut obviously] and run into my long time no see sis and i offer the elbow out armlock ... another jump gets us in some dive w band mayhem and little space ... she expresses physical contact appetite .. nother jump later more characters enter the plot and somehow one of them is her boyfriend artist ... but before that i notice she is changed and highly intelligent.
the rest is basically 'scene to scene' repeats of little tat searches and wrapping adjustments .... just about the main recurring actual movement that goes on in my house anymore .. punctuated by some cooking and much rarer, wiping a section of the floor and/or doin a wash.
but much was seen and heard, lost to memory wholiness already.

The Nobel Prize Weed. Why Are We Warned Not to Use It?
Nature Lost Vault -- 178K views - 11 days ago
https://www.youtube.com/@NatureLostVault
178,587 views Jan 25, 2026 #ForgottenMedicine #ancientwisdom #NobelPrize
In 2015, Tu Youyou became the first mainland Chinese scientist to win the Nobel Prize in Medicine. Her discovery? A compound extracted from a common garden plant that had been documented in Chinese medical texts since 340 AD. This plant, Artemisia annua (sweet wormwood), kills malaria parasites faster than any drug in history and has saved millions of lives across Africa. Yet today, the World Health Organization explicitly discourages using the plant itself, insisting you must buy the extracted pharmaceutical version instead.

This is the story of wormwood, a plant that emperors reserved for themselves, soldiers carried into battle, and modern science validated with the world's highest honor. It's also the story of how a multi-billion dollar pharmaceutical industry has worked to suppress knowledge of the whole plant while monopolizing its extracted compounds.

---THE ANCIENT AUTHORITY:
In 340 AD, Chinese scholar Ge Hong documented sweet wormwood in his emergency medical handbook "Zhouhou Beiji Fang" (Emergency Prescriptions Kept Up One's Sleeve). His instructions for treating "intermittent fevers" (malaria) were oddly specific, soak the plant in water, wring out the juice, drink it all. Critically, he never mentioned boiling it. This detail, preserved for 1,600 years, would prove essential when modern science finally validated his

prescription.
By 1596, the renowned physician Li Shizhen included qinghao (sweet wormwood) in his "Compendium of Materia Medica," cementing its place in traditional Chinese medicine not just for fever, but for expelling intestinal parasites, hence the name "wormwood."
PROJECT 523 - THE SECRET MISSION:
In 1967, as malaria killed more soldiers in Vietnam than combat, the Chinese government launched "Project 523", a secret military operation to find a cure. After screening 240,000 compounds with no success, they assigned pharmaceutical chemist Tu Youyou to review ancient texts. She and her team tested 2,000 traditional recipes and 380 plant extracts. When sweet wormwood showed inconsistent results using conventional boiling methods, Tu remembered Ge Hong's 1,600-year-old detail about avoiding heat. Using low-temperature ether extraction on October 4, 1971, she isolated artemisinin, compound showing 100% effectiveness against malaria in test subjects.
Tu volunteered to be the first human test subject. All 21 patients in the initial clinical trial recovered completely. The World Health Organization estimates artemisinin-based drugs have reduced global malaria mortality by over 20%, saving more than 100,000 lives annually in Africa alone.
THE SCIENCE: Artemisinin contains an endoperoxide bridge that reacts with iron. Malaria parasites, gorging on iron-rich hemoglobin, essentially detonate when artemisinin enters them, generating free radicals that kill the parasite within hours. But here's what the pharmaceutical industry doesn't want discussed: a 2018 study in the Democratic Republic of Congo with 800 schistosomiasis patients found that tea made from whole Artemisia leaves cured patients in 14 days, faster than the pharmaceutical drug praziquantel. More shocking: Artemisia afra tea (containing virtually no artemisinin) worked just as well as Artemisia annua tea (high in artemisinin). Research from Worcester Polytechnic Institute explains why: whole plant bioavailability is 45 times higher than isolated artemisinin. The plant's flavonoids, terpenes, and phenolic compounds work synergistically, enhancing absorption and providing additional antiparasitic effects.
SOURCES:
"Emergency Prescriptions Kept Up One's Sleeve" (Ge Hong, 340 AD); "Compendium of Materia Medica" (Li Shizhen, 1596)

some [white {haired}] fella:

The first medicinal herb seed company in the USA. Located in the Siskiyou Mountains of Southern Oregon. Family run, the name is well-known in science and herbalism: Cech. Recognizing the need for diverse medicinal herb seeds, we travelled globally to find the best from every culture, returning to our organically certified farm and greenhouses for propagation and increase. Our seeds and plants are open-pollinated, heirloom, non-gmo, non-hybrid and seed saver friendly. Specializing in medicinal herb seeds, medicinal herb plants, books about making medicine and growing herbs, seed cleaning screens and tincture presses. Multiple introductions to gardeners and herb industry include: Ashwagandha, Andrographis, Ashitaba, Gotu kola, Ma-huang, various basils, Spilanthes and more. For the benefit of people, plants and the planet.

Mugwort is a plant famed for its effects on lucid dreaming, but its medicinal properties and actions do so much more than that. With a distinct effect on the nervous, digestive, hepatobiliary, and reproductive systems, Mugwort navigates, regulates, and balances the highways that connect them all.

In today's plant profile, you'll discover:

-Mugwort's unique flavor profile and how this leads to its complex actions
-How Mugwort impacts the nervous, digestive, and reproductive systems

-The psychological and emotional indications of Mugwort
-The many sides of Mugwort and its planetary correspondences
-Different ways you can use and prepare Mugwort

Evolutionary Herbalism is built upon holistic philosophies of herbalism and nature from across the world. From Ayurveda and alchemy, to clinical herbalism, medical astrology and modern science, this approach seeks to unite traditional models of plant medicine into a cohesive clinical practice. This holistic model of herbalism honors the whole plant and the whole person, and seeks to utilize medicinal plants in a way that equally addresses the physical, mental, emotional, and spiritual sides of healing.

Sajah Popham is the author of Evolutionary Herbalism and the founder of the School of Evolutionary Herbalism, where he trains herbalists in a holistic system of plant medicine that encompasses clinical Western herbalism, medical astrology, Ayurveda, and spagyric alchemy.
His mission is to develop a comprehensive approach that balances the science and spirituality of plant medicine, focusing on using plants to heal and rejuvenate the body, clarify the mind, open the heart, and support the development of the soul. This is only achieved through understanding and working with the chemical, energetic, and spiritual properties of the plants. His teachings embody a heartfelt respect, honor and reverence for the vast intelligence of plants in a way that empowers us to look deeper into the nature of our medicines and ourselves.

White House peak diabolical yesterday
https://www.tumblr.com/kramlabs/808981178247987200/glyphosate-round-up-monsanto-big-agra-wins?source=share
7 C.F.R. part 789
https://www.tumblr.com/tagged/glyphosate
when were the last changes to rules about glyphosate use made?

> The last significant changes regarding glyphosate use under 7 C.F.R. part 789 were influenced by a draft update from the U.S. Environmental Protection Agency (EPA) in 2023, specifically in July, when it released a draft Herbicide Strategy for public comment. This draft is part of the EPA's efforts to enhance protections for endangered species and streamline the regulation of herbicides.
>
> A key point is that while the draft outlines potential mitigations (safeguards or adjustments) for the use of glyphosate, the strategy itself does not directly impose new requirements for pesticide use. Instead, these mitigations would only come into effect once the EPA finalizes registrations or registration reviews based on the input received from public comments.
>
> Moreover, the agency expects to finalize its Herbicide Strategy by August 2024, which could further refine how glyphosate and other herbicides are regulated.
>
> Recent Developments
> ----- In November 2023, the U.S. Court of Appeals for the Ninth Circuit ruled that California's Proposition 65 warning requirement for glyphosate violated the First Amendment, illustrating ongoing legal debates surrounding glyphosate regulation.
> The EPA is currently set to complete a human health risk assessment for glyphosate in 2026, which could lead to new label changes addressing risks associated with use.
>
> These updates indicate a dynamic regulatory environment for glyphosate, reflecting both scientific

reviews and public sentiment concerning pesticide safety and usage.

BREAKING: Trump Invokes Defense Production Act to Protect Glyphosate
https://www.thefocalpoints.com/p/breaking-trump-invokes-defense-production
by Nicolas Hulscher, MPH

In a sweeping executive order, President Trump invoked the Defense Production Act to secure domestic production of elemental phosphorus and glyphosate-based herbicides, formally elevating them to national defense priorities.
https://www.whitehouse.gov/presidential-actions/2026/02/promoting-the-national-defense-by-ensuring-an-adequate-supply-of-elemental-phosphorus-and-glyphosate-based-herbicides/

The order grants Section 707 compliance immunity under the Defense Production Act, meaning companies are protected from liability for actions taken in compliance with federal directives. While this does not automatically eliminate cancer lawsuits, it could allow producers to argue that certain production or allocation decisions were federally mandated under national defense authority. This creates a significant legal shield that may complicate future litigation against glyphosate manufacturers.

A weed killer classified as "probably carcinogenic" by an international cancer agency is now embedded in America's defense supply chain. A recent controlled animal study demonstrated that glyphosate can induce rare, aggressive, and fatal cancers across multiple organs â€” even at doses considered "safe" by U.S. and EU regulatory thresholds.

Best Tip To Combat Glyphosate Effects
... which are: to numb / lame lower peristalsis [this has to do with being a 'derivate' of {/a castrated form of} glycine, a most reverent, since oldest / smallest essential amino reigning over smoothness 'down there'] - do not let the devils sever you from and get you out of touch with what forms first on all embryos: the asshole.

Too late to stop nimoby [the 'bowblack' {fave coinage of the last few days} takes 'care' of that]. What must and can i tell u? Tell u what, .. just listen to some George Webb so he can tell you what goes down on the geopol chess board 'operatrix'.

Never too late to start your 'lockknee hop' #LockKneeHop .. a digestion trick any old good enuff nursemaid and mom knows to apply to her brood at the earliest times of convenience.

body part assigned the house and sign of healing [pisces]: HEEL !! !!! !!!!!!
heelthump VS #ZioKneelTrump .. be sure to learn what that dastardly bastard did on the 18th:

https://www.whitehouse.gov/presidential-actions/2026/02/promoting-the-national-defense-by-ensuring-an-adequate-supply-of-elemental-phosphorus-and-glyphosate-based-herbicides/

> The order grants Section 707 compliance immunity under the Defense Production Act, meaning companies are protected from liability for actions taken in compliance with federal directives. While this does not automatically eliminate cancer lawsuits, it could allow producers to argue that certain production or allocation decisions were federally mandated under national defense authority. This creates a significant legal shield that may complicate future litigation against glyphosate manufacturers. ----- #NicHulscher

1.44M subscribers ..... 675x when i get there ... 689 before i'm ready to play it ... and xxx when i'm done deliberating on wether or not i want to disgrace my blog with that shallowsman .... or not ...

> Feb 20, 2026
> President Donald Trump signed an executive order Wednesday declaring the United States' supply of glyphosate, a controversial chemical used as a herbicide in commercial food production, a critical component of ensuring national and food security.
>
> Trump's order said there is no viable alternative to the chemical, and an adequate supply is crucial for domestic agricultural production, as the herbicide is instrumental in allowing American farmers to maintain high yields and low production costs. Meanwhile, the chemical has come under fire by the Make America Healthy Again (MAHA) movement, with thousands of lawsuits across the country claiming exposure to it causes multiple types of cancer.
>
> Glyphosate is a key ingredient in popular herbicide Roundup, produced by German-based agrochemical company Bayer's subsidiary, Monsanto, and commonly used in American food production.

sabby on glyph

Dear Sabby, it's not GlyFosfate ....
---------- E // NL..... // Fr//German
GLYPHOSATE // GLIEFOSAAT // GLYPHOSAT
Celiac spread follows glyphasate spread [where bread is big] but in NL called 'soeliakie' [SA karma callin] and not 'Glyphosate Disease', wich it Do Be.
1st hour of the day

last hours of the morning:
https://pmc.ncbi.nlm.nih.gov/articles/PMC11445186/
hmmm, .. this is new to me: "N-(phosphonomethyl} glycine" ... still think it goes to the gut of matter to call it castrated glycine [one of THE smalles oldest hence most venerable and democratically majoritarian {tho 'houndcloseted' and 'retreated' to denied / not seen / 'notzid nazID', unceded, never 'deeded' yet nevertheless terreverlastingly vital crux / hing x turnachurnin} and 'kantel' points], ubiquitous and reigning over lower parts specially ... first hole to appear on ALL foetuses are assholes people .. if u truly understand a pest u understand the rest ... and alas, not till then, so leave them little girls attracted to 'monsters' alone already.
last alinea of a not to be trusted site [good example of what must and/or ought to be in 5x cosigned paper] which is the only one ddg ai spontaneously quotes when i press their 'more' bar, the examples begin 'the great fan out' [hah!!]:

> ..analysis of scientific production on glyphosate: an example of politicization of science..
> Historical examples of politicization in scientific research on pesticides include the controversies surrounding the use of DDT, which was initially celebrated for its effectiveness but later banned due to health and environmental concerns highlighted by Rachel Carson's "Silent Spring." Additionally, the involvement of United Nations agencies in the 1940s to 1960s in promoting synthetic pesticides reflects the complex interplay between scientific expertise and political agendas, often prioritizing agricultural productivity over ecological and health impacts.

is he a raw food man? ... got 2 comments for this hour long relaxed chat:

> @yoenseno --- 3 years ago
> My son in law worked in the Monsanto Roundup production lab and was assured that they were taking all precautions to be safe. He used his work shoes to walk across the golf course and could trace his footsteps from the dead grass his shoes killed. His infant daughter crawled all over the floor at home where he walked. She suffered from severe allergies from an early age and was subjected to steroids inhaling and nebulizers and many medications and shots way into her late teens. I'm worried about long term effects on her genes.
> 4
> @GardenerEarthGuy----- 3 years ago
> I'd wager in Reno that 85% of all produce purchased at a grocery store has a seed stock with something in the genetics called, Round Up Ready- meaning resistant genetics are in the seed and Round Up can be applied through chemigation for weed control, having no effect on the desired plant.
> That produce is everywhere in the food chain-
> Doubtful America can do a Food Reset- outside of small growers who do this and are actively hunted by authorities for cultivating clean food.
> Problem is most Americans are disconnected from The Creation- and would struggle to grow a few radish.
> This is multi generational and by design...
> Unless rock stars make videos about growing heirloom, pesticide free food- it will go unnoticed.
> Good Luck To You-
> GEG

Glyphosate is the rock star of pesticides, albeit a controversial one. With 6.1 billion kilograms applied globally in the last decade alone

Pesticides And Politics: The Life Cycle of a Public Issue
Christopher J. Bosso -- 1987 UoPittsburgh Press
https://doi.org/10.2307/jj.5973233
https://www.jstor.org/stable/jj.5973233
Chapter One Images of Policymaking
(pp. 3-20)
American political science is a museum of many canvases, each displaying some artist's concept of political reality. Some represent the "elitist" school: bold splashes of color arrayed horizontally to convey strata of power. Others emerge out of the "pluralist" school, with vectors coalescing almost randomly to produce new, but always temporary arrangements. Still others are jumbles of geometric shapes, each depicting some concise and more permanent network of political interaction; these canvases find their roots in the "subgoveroment" school. And so on. The problem, as the museum-goer quickly discovers, is to make the historical and conceptual links among these competing...

Chapter Two The Pesticides Paradigm -- (pp. 21-44)
Had you read the New York Times on June 26, 1947, you probably would have devoted your attention to the labor strikes sweeping the nation after Congress overrode Truman's veto of the Taft-Hartley Act. You might then have turned to the international news, which focused on the nascent United Nations, or to the sports, where rookie Jackie Robinson was packing Brooklyn Dodgers fans into Ebbetts Field. Trailing not too hard after the sports pages was the "News on Food" section, devoted primarily to recipes, articles on new products, and other household information. It wasn't much of a section, and easy...

Chapter Three The Politics of Clientelism -- (pp. 45-60)
https://doi.org/10.2307/jj.5973233.9
https://www.jstor.org/stable/jj.5973233.9

The technological breakthrough in chemical control of pests after World War II burst onto the agricultural scene without a professional technocracy to guide and control its use. Literally overnight, some of the most toxic and ecologically disruptive chemicals known to science were placed in the hands of farmers, agribusiness salesmen, and federal farm advisors almost totally unaware of their genetic and ecological implications.
"The publicity given DDT," one food company executive remarked in 1950, "might well be envied by any Hollywood movie star."Â² Such was the case with pesticides generally during the immediate postwar years. Popular magazines breathlessly reported each...

Chapter Four The Apotheosis of Pesticides -- (pp. 61-78)
https://doi.org/10.2307/jj.5973233.10
https://www.jstor.org/stable/jj.5973233.10

These are the days in which even the mildly critical individual is likely to seem like a lion in contrast with the general mood. These are the days when men of all social disciplines and all political faiths seek the comfortable and the accepted; when the man of controversy is looked upon as a disturbing influence; when originality is taken to be a mark of instability; and when, in minor modification of the scriptural parable, the bland lead the bland.
Thus John Kenneth Galbraith pungently summarized an entire decade, in a sardonic encapsulation of the 1950s that no doubt irked...

Chapter Five Creating a Public: The Eradication Campaigns
(pp. 79-108) --- https://doi.org/10.2307/jj.5973233.11
https://www.jstor.org/stable/jj.5973233.11

Suppose a fanner cannot sell corn to a local grocer unless it is free of worms and spots. The fanner's livelihood is at stake, so he sprays a chemical pesticide on the crop to make it conform to local consumer

demands. The fanner has solved his immediate problem if the grocer regularly purchases the produce and if nobody (save the fanner) cares much about how the crop is grown. The transaction between fanner and grocer remains private, and the "problem" is resolved without making demands on those not immediately affected. Suppose, however, that the farmer's pesticide drifts onto neighboring properties...

Chapter Six Sea Change in the Sixties (pp. 109-142)
While new leaders and leaders in general make some difference, particularly at certain times, the impact of elections tells us as much about environmental change as about personnel change. Leaders matter, but always within certain parameters.
John Kennedy, who pledged to get America "moving again," came to office during what Samuel Huntington calls "a shift from complacency to commitment" that would transform American society and its politics during the next decade.Â² The new president was in many ways a product of tidal change, a decade of activism to contrast dramatically with the 1950s and its self-assured affirmation of the American...

Chapter Seven Environmentalism, Elite Competition, and Policy Change ---- (pp. 143-177) A miracle of public opinion has been the unprecedented speed and urgency with which the ecological issues have burst into the American consciousness. Alarm about the environment sprang from nowhere to major proportions in a few short years.
Public opinion does not emerge like a cyclone and push obstacles before it. Rather, it develops under leadership.Â²
The Gallup Poll in mid-1970 asked respondents to select the domestic problems that government should address. Most chose crime first, which was not unusual, but this time some 53 percent of those polled also cited air and water pollutionâ€”a dramatic shift from days...

Chapter Eight The Policy Pendulum: Pesticides Politics into the Eighties ---- (pp. 178-206)
American history normally marches through a succession of quadriennial presidential terms. But the rhythm of our history also can be divided into what we can call "issue eras," distinct periods in the national parade dominated by a single issue, or a cluster of related issues. We thus speak of the Depression, the civil rights era, or the "antiwar years," confident that such shorthand bespeaks a definite period as well as a dominant coloration in the national mood. To mark transitions between such eras clearly is more difficult than to separate presidential terms; the passage of personalities seems more certain than...

Chapter Nine The Endless Pesticides Campaign
(pp. 207-233) The law of politics, Walter Lippman once observed, is the law of the pendulum. Indeed, if the 1960s and early 1970s witnessed unparalleled spasms of social and political reform, "The political climate of the late 1970s was distinguished by the increasing ascendancy of conservative, antigovernment attitudes among the public at large and of conservative, antigovernment ideas among the intellectual elite." Scholars spoke of policy failure, while politicians bemoaned the failure of massive sums of public monies to ameliorate some of our most vexing social and economic dilemmas. Failure seemed everywhere, since poverty and pollution obviously had not gone away.Â² This...

Chapter Ten The Pesticides Perspective Revisited
(pp. 234-264) Looking back over this study dredges up memories of my undergraduate geology course. We would slog through fields and quarries, returning to the lab with a panoply of pebbles, crystals, or whatever looked interesting. Then we would study our finds, often for days, turning each over under ultraviolet light, dripping tears of acid on each face, or scraping off shavings for further tests. Each session ended by locking up our materials, to which we would return the next day, ready to pick up where we left off. The rocks were still there, unchanged.

> The Glyphosate Betrayal: National Defense or National POISONING? w/ Jonathan Otto
> Man in America ----- 17 hours ago 66.4K views
> In this episode, I sit down with investigative filmmaker and health advocate Jonathan Otto to expose a new executive order that quietly ties glyphosate-based herbicides and elemental phosphorus to "national defense" while shielding the corporations behind them from accountability. We break down how these pesticides disrupt mitochondrial and stem cell function, their links to cancer, autism, and autoimmune disease, and how they've infiltrated everything from "organic" bread to polar bears in the Arctic. Jonathan pulls back the curtain on the cancer industry and the pharma giants profiting from both the poisoning and the 'treatments'.

are the free freeing yet? Reminds me of John D Hamaker's quip: 'are the ... ' ... forgot ... check my old work ... via a pertinent 'memorandum' there perhaps
ps feb 25th: ... oh i remember now [returning to see why this post beats the rest of the month by factor 3]: "are the marines helping yet?"

Ken O'Keefe was on a big show last week, sounding sharp and sound [the man who gave up US citizenship in protest, was part of the deadly flotilla years ago and partook of the giant and demonically bloody glycine targetting {ZiOrqs aiming for the knees} soon after, tryin to adress the ZioWall years .. .almost a decade before my concepts concerning duh #ZioPennereee ripened .. but he aint there yet .... who is anyway?] No news on the #MineralMetabolization front ... wait, i'll double check that .....

ethically assimilated

45Mb pdf at the bottom of the 3rd 10 google results:

https://files.spawningpool.net/docs/Vault2.0.-.TTRPG-Gamebooks/Modern%20AGE%20%28AGE%29/Modern%20AGE%20-%20Threefold%20%7BGRR6306%7D.pdf

> .. mineral metabolization not found in the primeline. There are no communities of non-jana (that is, obviously magical ancestries) close to Des Ratones ...

= only exception to nerdy medic takes there and via ddg and yandex has nothing [even .. suprisingly enuff .. cause more of THE TO BE 'ETHICALATED' PRIMALLY SUBSTANTIVE BASIS .. {to be tumbled and twirled into ethics enrichment, to become 'mindfill', imagination enhancing, culture voluntizing, ethics enhancement, .. keystone of keystonily assimilated 'crudimentary101' #MineralMetabolization} takes place in an 11 timezone swath, even if cold often and long, than in a 2 or 3 wide one, i would wager].

OK ..... finally time for the tip i promised in the title
... which i wrote before all that grace note 'getierlantijn' above
https://archive.org/details/surviving-glyphosate-2023-73p
Glyphosate effect numero uno:
to numb / lame lower peristalsis [this has to do with being a 'derivate' of {/a castrated form of} glycine, a most reverent, since oldest / smallest essential amino reigning over smoothness 'down there'] - do not let the devils sever you from and get you out of touch with what forms first on all embryos: the asshole.

Too late to stop nimoby [the 'bowblack' {fave coinage of the last few days} takes 'care' of that]. What must and can i tell u? Tell u what, .. just listen to some George Webb so he can tell you what goes down on the geopol chess board 'operatrix'.

Never too late to start your 'lockknee hop' #LockKneeHop .. a digestion trick any old good enuff nursemaid and mom knows to apply to her brood at the earliest times of convenience.

body part assigned the house and sign of healing [pisces]: HEEL !! !!! !!!!!!

heelthump VS #ZioKneelTrump .. be sure to learn what that dastardly bastard did on the 18th:

https://www.whitehouse.gov/presidential-actions/2026/02/promoting-the-national-defense-by-ensuring-an-adequate-supply-of-elemental-phosphorus-and-glyphosate-based-herbicides/

> The order grants Section 707 compliance immunity under the Defense Production Act, meaning companies are protected from liability for actions taken in compliance with federal directives. While this does not automatically eliminate cancer lawsuits, it could allow producers to argue that certain production or allocation decisions were federally mandated under national defense authority. This creates a significant legal shield that may complicate future litigation against glyphosate manufacturers. ----- #NicHulscher

pps: ddg ai links to a 2015 psu page that's halfway decent, especially considering the 2nd of two pages offered initially, is an utter shite, incredibly duddy [goin nowhere] page:

counts for good sense only marginally in my book ....
---------- ['too stuck or burrowed into the system' .. i forget there exact wording already .. 'for radical change' .. and then they just waste time w nerdy burblage .. instead of goin for shockvalue to help see that the infix 'glyfix is chokes out guts w a simple biofilm that magnifies, draws focus to and blows up all previously only marginally problematic and forgivable sinful behaviours like the mildly stuporific dialdowner and spoilage known as gluttony, into a life threatening prob]----------

.... but it's a large group of programs goin on via this account and they certainly 'pull da numbers' .. kinda depressing ...

> MAHA News [2.20] - Glyphosate E.O., Food System = Warfare, GRAS System, Aging Farmers = Not Good
> Badlands Media == 234K followers ::::: Streamed on: Feb 20, 4:02 pm EST /// 42.4K
> MAHA News, Jordan Sather and Nate Prince break down the controversy surrounding the new executive order addressing glyphosate and elemental phosphorus under the Defense Production Act. They examine claims about immunity for Bayer, clarify what the order actually does, and discuss why glyphosate has become so embedded in the U.S. food system that an immediate ban could devastate farmers and spike food prices. The hosts reference Sri Lanka's failed nationwide organic experiment, RFK Jr.'s comments calling America's food system "chemical warfare," and the broader tension between reform and food security.
>
> They also expose the flaws in the GRAS system, which allows food companies to self-certify ingredients as safe, and highlight alarming obesity and malnutrition trends in the U.S. Finally, they address the rapidly aging farmer population, rising farm bankruptcies, and structural issues making agriculture less viable for the next generation.

one of 10 slides:

> Glyphosate resistance - Glyphosateis glycine derivative - It is a broad spectrum herbicide it acts on shikimate pathway - Glyphosate acts as competitive inhibitor of 5-enoyl pyruvate shikimate 3-phaspate synthase(EPSPS) it is a key enzyme in shikimate pathway - which is important for production of aromatic aminoacids phenylalanine, tryptophan, and tyrosine
> herbicide resistance in plants
>
> Herbicide tolerance plants are developed to control weeds that compete with crops for resources and can reduce crop yields by 20% annually. Weeds are typically controlled mechanically or through herbicides. Glyphosate is a commonly used broad-spectrum herbicide that acts by inhibiting the shikimate pathway enzyme EPSP synthase, preventing aromatic amino acid production. Transgenic plants are made tolerant to glyphosate by introducing the aroA gene to allow continued shikimate pathway function. Phosphinothricin resistance is conferred by the bar gene, which allows detoxification of the glutamine synthase inhibitor phosphinothricin. Bromoxynil tolerance results from the bxn gene introducing nitril

> Figure 1. Glyphosate research and development. A: Period of development, approval and patenting. B: Initial safety assessments. C: Advent of glyphosate-tolerant-crops. D: Several important reviews on health and ecotoxicology documenting low toxicity. E: Emerging evidence on crop damage, residue accumulation and impact on non-target organisms. F: Evidence on complex effect.
>
> Conclusion
> The recognized higher toxicity and the stronger potential for negative effects on health and environment should be important arguments for restrictions in use of glyphposate and GBHs. Despite this evidence, regulatory authorities have gradually allowed more sources of glyphosate into the food-supply and higher residue levels, in an ongoing development contrary to toxicological principles and common sense.

> Agri-Pulse Open Mic: Bill Anderson - CEO, Bayer AG ---- March 16, 2025
> The global company is heavily invested in developing innovative technology for farmers around the world. The company's pursuit of crop genetics, herbicide resistance, chemical crop protection and data management has benefitted farmer goals toward both sustainability and productivity. Anderson tells Agri-Pulse that legal challenges to glyphosate are limiting the company's investments in innovation and may result in eliminating the sale of a herbicide that many farmers consider essential to sustainable production.

I demand Glysophate poison license is revoked permanently. It destroys the gut and soil microbes the fine immune protecting membrane and cells. It contains arsenic molecule and is destroying our childrens health and people's health incrementally. Fatty liver disease to name but one disorder. Leaky gut. I demand these chemicals are banned from being used as a crop dry off on all foods. It is destroying animals insects plants and cellular structure of all life. I demand it be eradicated from the planet. NO CHEMICALS ARE NEEDED TO FARM AND CREATE HEALTHY FOOD.

piet: from here on down all in caps .. which i changed to lower case ...

none!!! it is pure laziness and a very very very dangerous situation to all life to such an extinct that pregnant women and unborn children and sequential generations will have weakened immune systems due to chemicals and vaccines. we are a disgrace as human beings to enable this filth ....and twisted in our notions. all chemicals damage cells and membranes. it is destroying the diversity of microbiome in soils plants and animals and people and leaving a very dangerous opening to nasty viruses taking over in food and people. viruses have been round far longer than we have and will remain so. chemical useage only makes them stronger. that's well proven. nature created biodiversity microbiome for very very good healthy reason. science is destroying the basic understanding and ethos of nature and all life. chemical scientists and vaccine scientists are extremely exhibiting quackery lies deceit and their own demise along with innocent i'll informed deceived bystanders. our water soils food rain skies is extremely polluted. stop glysophate and dicamba and bee killing agents .this is a pure disgrace to every agent. man will burn in his own flame of destruction. that is beginning to happen now. while the earth microbiome and babies and children's microbiome is being destroyed there will never be happiness for anyone NOT EVEN THE GREEDY.

ps: BEAD = Biological and Economic Analysis Division

they cite a handful of rapid and uncritical adoption ... and then, suprisingly, a critical one by an icon in the 'GLYPHOTRUTHERS' community:

Comment EPA-HQ -OPP -2009-0361-0036.1

Comment Summary: This comment is by a Purdue University emeritus professor of plant pathology. Dr. Don M. Huber.

BACK TO THE EPA THING
William Dykstra - "Consensus Review of Glyphosate" dated March 4, 1985.
FIFRA Scientific Advisory Panel report dated Feb 24, 1986
"inadequate animal evidence of oncogenicity."
"... after adjusting for the greater survival in the high-dose mice compared to concurrent

controls, no statistically significant pairwise differences existed, although the trend was significant."

a very very creepie line shows up near the end of page 6, a third of the way to the last, 19th page:

"At 12 months, 10 animals/sex/group were sacrificed."

what they refuse to admit here is that they aborted valid result, terminating the experiment prematurely ... an exceptionally long enuff one was done only recently in italy .... and results were incontrovertibly horrific .....
The creep is no accident and repeated an alinea later:

"....were sacrificed before week 55."

results at diffrunt dosage all over the place but [standard response] "makes no difference" [TO THEM!!!!!] "THEREFORE .... not considered compound-related." ... iow, .. NOT 'and so they must be considered compound-related' .... BUT 'let alone diffs can...', OR 'far be it from us to logically ascribe ...' ..... diffs and/or no diffs ... to the blessed substance that so so secretly supplements our income [in fact, in exactly as secret FOR OTHERS] a set of ways as we hope to keep the inner workings of the stuff [FOR OTHERS. ... ARENT WE GENEROUS .. HOW DO YOU LIKE A FEW REPIET BLOWBACK BEK n CALLS .. HUH???].

... . The diffs we notsee nazi are between that [BribeLoot/Perk] and what we do/ put up with for that [namely, play henchmen to innumerable creatures great and small but hey, we don't schlepp our work home w us at day's end, that' what brackets are for innit?].

shortest possible summary of EPA's efforts:
... all sorts of horrific facts are listed, and then 'considered' .. that is to say, in this context, DENIED the signifcance and consequences they deserve [Cause 4 immediate BAN, if not prosecution for past 'sales']

no news at all to me the epa is a satanic ploy. they allowed Dupont to move to the most delicate part of the Rhine Delta in the 50s after/ cause[?] it proved it's mettle in Ohio ... talk about 'sacrifice'....

To close i leave you with one last quote snip:

"Peer Review Committee did not feel ...."

ps2:
i am testing to see if a global scourge is a better field to make 'find the others' as a step 1 rule work. There must be, god knows i tried the 'steppin around probs approach [carryin 'Healthy Harvest' catalog with me mid80s over hill n dale on a bicycle as part of my first 3 kilo mobile library, i still have it] and in the end 'stepped rite in'm' from maxed out frust. And so i'm gonna try this next:
Glyphosate Victim Coach For Hire .
a repiet w some emphasis: ...see above

https://alanplewis.com/wp-content/uploads/2024/08/Glyphosate-patents-summary-2-1.pdf

Glyphosate Patents -------1. Chelating Agent. U.S. patent number 3160632 A, filed: January 30, 1961; awarded: December 8, 1964.

Inventors: Toy Arthur Dock Fon, Eugene H Uhing; Stauffer Chemical Co

Title: Aminomethylenephosphinic acids, salts thereof, and process for their production.

Glyphosate is a chelating agent, wetting agent, biologically active compound and chemical intermediate for the production of aminornethylenephosphonic acids and derivatives thereof.

Due to its strong metal chelating properties, glyphosate was initially used as a descaling agent to clean out calcium and other mineral deposits in pipes and boilers of residential and commercial hot water systems
